## CompTIA Data+ Certification Exam Sample Questions (Q110-Q115):

### NEW QUESTION # 110

Kelly wants to get feedback on the final draft of a strategic report that has taken her six months to develop.

What can she do to get prevent confusion as see seeks feedback before publishing the report?  
Choose the best answer.

- A. Distribute the report to the appropriate stakeholders via email.
- B. Publish the report on an internally facing website.
- C. Use a watermark to identify the report as a draft.
- D. Show the report to her immediate supervisor.

**Answer: C**

Explanation:

While Kelly needs feedback from the appropriate stakeholders, doing so without a watermark could lead them to believe the report they receive is the final product.

### NEW QUESTION # 111

An analyst wants to create a historical data set for the past five years with each year in its own data set. Which of the following methods is the best way to create this historical data set?

- A. Data concatenation
- B. Data normalization
- C. Data transpose
- D. Data append

**Answer: A**

### NEW QUESTION # 112

An analyst is reviewing the following data:

Car ID Speed

123155  
566436  
564418  
650567  
546436  
645638

Which of the following should the analyst include in the measures of central tendency for speed?

- A. Mode = 36 Median = 37 Mean = 41.5
- B. Range = 49 Max = 67 Min = 18
- C. Mode = 36 Max = 67 Min = 18
- D. Mode = 38 Range = 31 Mean = 42.5

**Answer: A**

Explanation:

The measures of central tendency include the mode, median, and mean. The mode is the value that appears most frequently in a data set. In this case, the speed of 36 appears twice, making it the mode. The median is the middle value when a data set is ordered from least to greatest; for these speeds, when ordered (18, 36, 36, 38, 55, 67), the median is the average of the two middle numbers, which is ( $\frac{36 + 38}{2} = 37$ ). The mean is the average of all values, calculated as ( $\frac{55 + 36 + 18 + 67 + 36 + 38}{6} = 41.7$ ).

Reference:

The calculation of the mode, median, and mean is based on standard statistical formulas and definitions.

The measures of central tendency for speed include the mode, median, and mean. To calculate these, we first need to organize the data:

Speeds in ascending order: 18, 36, 36, 38, 55, 67

Mode is the value that appears most frequently, which is 36, as it appears twice.

Median is the middle value when the data is ordered. Since we have an even number of observations, we take the average of the two middle values (36 and 38), resulting in 37.

Mean is the sum of all values divided by the number of values.  $(18 + 36 + 36 + 38 + 55 + 67) / 6 = 41.5$   $(18 + 36 + 36 + 38 + 55 + 67) / 6 = 41.5$ . Thus, the correct option is D, which includes Mode = 36, Median = 37, and Mean = 41.5. The range, maximum, and minimum

values, although useful in understanding data dispersion, are not measures of central tendency and are therefore not relevant to this specific question.

### NEW QUESTION # 113

Which of the following is the best approach to use to gain a general understanding of a data set?

- A. Gap analysis
- B. **Descriptive statistics**
- C. Basic projections
- D. Trend analysis

**Answer: B**

### NEW QUESTION # 114

Emma is working in a data warehouse and finds a finance fact table links to an organization dimension, which in turn links to a currency dimension that not linked to the fact table.

What type of design pattern is the data warehouse using?

- A. Star.
- B. Comet.
- C. **Snowflake**.
- D. Sun.

**Answer: C**

Explanation:

Explanation

Correct answer C. Snowflake.

Since the dimension links to a dimension that isn't connected to the fact table, it must be a Snowflake, with a Star, all dimensions link directly to the fact table, Sun and Comet are not data warehouse design patterns.

### NEW QUESTION # 115
