Exam Salesforce Data-Architect Bootcamp, New Data-Architect Exam Online

What's more, part of that PassTorrent Data-Architect dumps now are free: https://drive.google.com/open?id=183_gc58SJBqZ91T-HUHMfTe0o-aoRFu9

As we all know, looking at things on a computer for a long time can make your eyes wear out and even lead to the decline of vision. We are always thinking about the purpose for our customers. To help customers solve problems, we support printing of our Data-Architect exam torrent. We will provide you with three different versions. The PDF version allows you to download our Data-Architect quiz prep. After you download the PDF version of our learning material, you can print it out. In this way, even if you do not have a computer, you can learn our Data-Architect Quiz prep. We believe that it will be more convenient for you to take notes. Our website is a very safe and regular platform. You can download our Data-Architect exam guide with assurance. You can take full advantage of the fragmented time to learn, and eventually pass the authorization of Data-Architect exam.

Salesforce Data-Architect certification is designed for individuals who have expertise in designing, building, and implementing data solutions on the Salesforce platform. Salesforce Certified Data Architect certification validates the skills required to design and implement scalable, robust, and efficient data solutions on the Salesforce platform. The Salesforce Data-Architect Certification is the ultimate validation of your skills and expertise in designing and implementing data solutions on the Salesforce platform.

New Data-Architect Exam Online, Preparation Data-Architect Store

If you are busy with your work or study and have little time to prepare for your exam, then our exam dumps will be your best choice. Data-Architect exam braindumps are high quality, you just need to spend about 48 to 72 hours on practicing, and you can pass the exam just one time. In addition, we are pass guarantee and money back guarantee for Data-Architect Exam Materials, if you fail to pass the exam, and we will give you full refund. We have online and offline service, and if you have any questions for Data-Architect training materials, you can consult us, and we will give you reply as soon as possible.

Salesforce Data-Architect (Salesforce Certified Data Architect) Certification Exam is designed for professionals who specialize in data architecture and management in Salesforce. Salesforce Certified Data Architect certification is highly sought after by employers who require experts to manage their Salesforce data. The Salesforce Data-Architect Certification is a symbol of expertise, proficiency, and knowledge in Salesforce data architecture.

Salesforce Certified Data Architect Sample Questions (Q232-Q237):

NEW QUESTION # 232
As part of a phased Salesforce rollout. there will be 3 deployments spread out over the year. The requirements have been carefully documented. Which two methods should an architect use to trace back configuration changes to the detailed requirements? Choose 2 answers

- A. Put the business purpose in the Description of each field.
- B. Use the Force.com IDE to save the metadata files in source control.

- C. Maintain a data dictionary with the justification for each field.
- D. Review the setup audit trail for configuration changes.

Answer: A,B

Explanation:
Option B is correct because putting the business purpose in the Description of each field is a method that an architect can use to trace back configuration changes to the detailed requirements1. The Description of each field provides a brief explanation of what the field is used for and why it is needed2. Option D is correct because using the Force.com IDE to save the metadata files in source control is another method that an architect can use to trace back configuration changes to the detailed requirements1. The Force.com IDE is an integrated development environment that allows developers to work with Salesforce metadata files and Apex code3. Source control is a system that tracks and manages changes to code and configuration files4. Option A is not correct because reviewing the setup audit trail for configuration changes is not a method to trace back configuration changes to the detailed requirements, but a way to monitor and audit the changes made in the setup area. Option C is not correct because maintaining a data dictionary with the justification for each field is not a method to trace back configuration changes to the detailed requirements, but a document that provides information about the data entities and attributes in a system.

NEW QUESTION # 233
Universal Containers (UC) has an open sharing model for its Salesforce users to allow all its Salesforce internal users to edit all contacts, regardless of who owns the contact. However, UC management wants to allow only the owner of a contact record to delete that contact. If a user does not own the contact, then the user should not be allowed to delete the record. How should the architect approach the project so that the requirements are met?

- A. Set the Sharing settings as Public Read Only for the Contact object.
- B. Set the profile of the users to remove delete permission from the Contact object.
- C. Create a validation rule on the Contact object to check if the current user is not the owner.
- D. Create a "before delete" trigger to check if the current user is not the owner.

Answer: D

NEW QUESTION # 234
Universal Containers (UC) has adopted Salesforce as its primary sales automated tool. UC has 100,00 customers with a growth rate of 10% a year, UC uses an on-premise web-based billing and invoice system that generates over 1 million invoices a year supporting a monthly billing cycle.
The UC sales team needs to be able to pull a customer record and view their account status, Invoice history, and opportunities without navigating outside of Salesforce.
What should a data architect use to provide the sales team with the required functionality?

- A. Create a visual force tab with the billing system encapsulated within an iframe.
- B. Create a mashup page that will present the billing system records within Salesforce.
- C. Write an Apex callout and populate a related list to display on the account record.
- D. Create a custom object and migrate the last 12 months of Invoice data into Salesforce so it can be displayed on the Account layout.

Answer: B

NEW QUESTION # 235
An Architect needs to document the data architecture for a multi-system, enterprise Salesforce implementation.
Which two key artifacts should the Architect use? (Choose two.)

- A. Integration specification
- B. User stories
- C. Non-functional requirements
- D. Data model

Answer: A,D

Explanation:

Option B is correct because data model is a key artifact that an architect should use to document the data architecture for a multi-system, enterprise Salesforce implementation1. Data model describes the structure and relationship of data entities within an organization2. Option C is correct because integration specification is another key artifact that an architect should use to document the data architecture for a multi-system, enterprise Salesforce implementation1. Integration specification defines the scope, requirements, design, testing, and deployment of integration solutions between Salesforce and other systems3. Option A is not correct because user stories are not key artifacts for documenting the data architecture, but agile development tools that capture the features and functionalities that users want from a system4. Option D is not correct because non-functional requirements are not key artifacts for documenting the data architecture, but quality attributes that specify how well a system performs its functions.

NEW QUESTION # 236

Universal Containers (UC) uses Salesforce for tracking opportunities (Opportunity). UC uses an internal ERP system for tracking deliveries and invoicing. The ERP system supports SOAP API and OData for bi-directional integration between Salesforce and the ERP system. UC has about one million opportunities. For each opportunity, UC sends 12 invoices, one per month. UC sales reps have requirements to view current invoice status and invoice amount from the opportunity page. When creating an object to model invoices, what should the architect recommend, considering performance and data storage space?

- A. Create a custom object Invoice _c with a master -detail relationship with Opportunity.
- B. Create a custom object Invoice _c with a Lookup relationship with Opportunity.
- C. Use Streaming API to get the current status from the ERP and display on the Opportunity page.
- D. Create an external object Invoice _x with a Lookup relationship with Opportunity.

Answer: D

Explanation:
Creating an external object Invoice_x with a Lookup relationship with Opportunity is the best option for modeling invoices, considering performance and data storage space. An external object allows the data to be stored in the ERP system and accessed via OData in Salesforce. This reduces the data storage consumption in Salesforce and improves the performance of queries and reports. A Lookup relationship allows the sales reps to view the invoice status and amount from the opportunity page. The other options would either consume more data storage space, require additional customization, or not provide real-time data access
