NEW QUESTION # 76

Which actions can be performed with the Software Update Manager (SUM) for an AS ABAP-based SAP system? Note: There are 3 correct answers to this question

- A. Setting up the Transport Management System (TMS)
- B. Applying a SPAM/SAINT update
- C. Correcting software information via a CISI run
- D. Applying an SAP kernel patch
- E. Installing an SAP Host Agent

Answer: B,C,D

Explanation:

The Software Update Manager (SUM) is a versatile tool used for various maintenance and update tasks in an AS ABAP-based SAP system, including:

* A. Applying an SAP kernel patch:SUM allows for the application of patches to the SAP kernel, which is the core component of the SAP system. Kernel patches may include security fixes, performance improvements, and new functionalities. The ability to apply these patches ensures that the system remains secure, efficient, and up-to-date with the latest SAP innovations.

* C. Correcting software information via a CISI run:CISI (Correcting Inconsistent Software Information) is a feature within SUM that detects and resolves inconsistencies in the system's software component versions. This is crucial for ensuring system stability and compatibility, especially before

* and after system updates or migrations.

* E. Applying a SPAM/SAINT update:SPAM (Support Package Manager) and SAINT (SAP Add-On Installation Tool) updates can be applied using SUM. These updates are essential for installing new support packages and add-ons, respectively, which can introduce new features, enhancements, and bug fixes to the system.

These capabilities highlight the multifunctional nature of SUM, making it an indispensable tool for maintaining the health, performance, and security of AS ABAP-based SAP systems.

NEW QUESTION # 77

Which entity contains authorizations for users in an AS ABAP-based SAP system?

- A. Single role
- B. Authorization profile
- C. Composite role
- D. Authorization object

Answer: B

Explanation:

An authorization profile in an AS ABAP-based SAP system is a collection of authorizations that are assigned to a user. An authorization is a permission to perform a certain action or access a certain object in the system. An authorization object is a logical grouping of one or more authorization fields that define the scope of an authorization. For example, an authorization object for document posting may include authorization fields for company code, document type, and posting period. A single role is a container for one or more authorization profiles that define the tasks and responsibilities of a user or a group of users. A composite role is a container for one or more single roles that can be used to simplify the role administration.
