Exam FCP_GCS_AD-7.6 Outline - Trustworthy FCP_GCS_AD-7.6 Practice

With the increasing marketization, the FCP_GCS_AD-7.6 study guide experience marketing has been praised by the consumer market. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the FCP_GCS_AD-7.6 study training materials, so we provide free pre-sale experience to help users to better understand our FCP_GCS_AD-7.6 Exam Questions. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of FCP_GCS_AD-7.6 latest questions to download.

Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions

(Q15-Q20):

NEW QUESTION # 15

You have been tasked with destroying all resources relating to a recent active-active high-availability (HA) FGSP Terraform deployment in Google Cloud.

What steps do you have to take to ensure a successful deletion? (Choose two.)

- A. Delete all resources manually because active-active HA clusters cannot be destroyed using Terraform.
- B. Use the command `terraform destroy` to delete all resources deployed by the Terraform template.
- C. Use the command `terraform plan` before destroying the Terraform template.
- D. Delete all dependencies to resources relating to the Terraform template.

Answer: B,D

Explanation:

Removing dependencies prevents resource conflicts during deletion.

`terraform destroy` is the correct command to cleanly and completely remove all resources created by the Terraform deployment.

NEW QUESTION # 16

You are tasked with deploying a load balancer in Google Cloud that does not terminate sessions arriving from outside the VPC and that forwards traffic to the organization's internal web servers.

Which load balancer type should you deploy?

- A. Proxy network load balancer
- B. External application load balancer
- C. External passthrough load balancer
- D. Internal passthrough load balancer

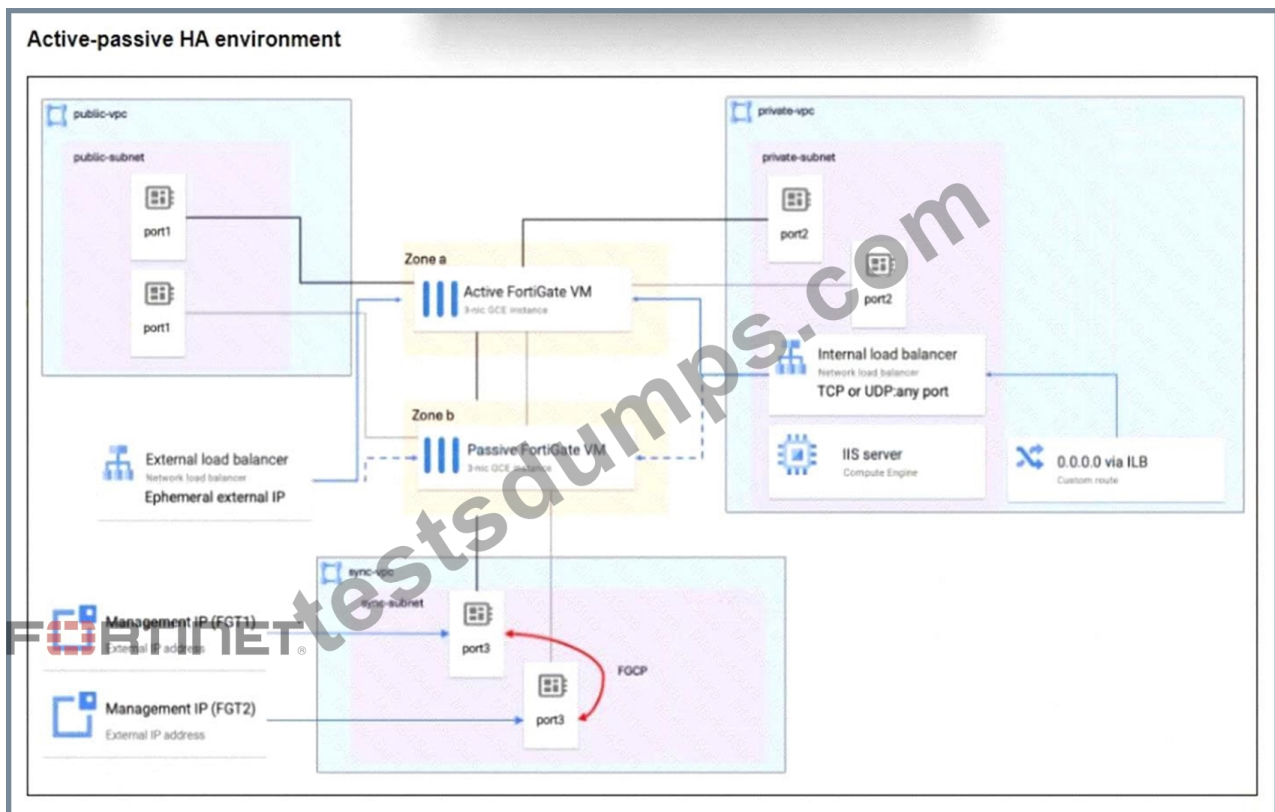

Answer: C

Explanation:

An external passthrough load balancer forwards traffic without terminating sessions, preserving the original client connection, which is ideal for forwarding traffic directly to internal web servers.

NEW QUESTION # 17

Refer to the exhibit.

Which three things happen during a failover in which the passive FortiGate VM becomes the master cluster member in an active-passive high-availability (HA) environment? (Choose three.)

- A. The Management IP address moves from port3 of the current active member to port3 of the new active cluster member.
- B. The custom route is updated using API calls to forward all traffic to port2 of the new active cluster member device.
- C. The health check ensures that incoming traffic to the ephemeral external IP address of the load balancer is forwarded to the new active cluster member.
- D. The health check for the passthrough load balancers forces internal traffic to route to port2 of the new active cluster member.
- E. The health check status will indicate that the old active cluster member is unhealthy.

Answer: B,C,E

Explanation:

The load balancer health check detects the failure of the old active member and forwards traffic to the new active member.

The health check reflects the status change, marking the previous active as unhealthy.

API calls update custom routes to redirect traffic to the new active cluster member's internal interface (port2).

NEW QUESTION # 18

Your organization is running an application in their shared services virtual public cloud (VPC) and must control network access natively in the cloud.

How can your organization meet this requirement?

- A. Create another VPC in front of the shared services VPC and deploy FortiGate.
- B. Create IAM access to allow access from specified resources only.
- C. Create a firewall rule that allows access to the application instance only.
- D. Create a firewall policy for the entire VPC that allows access from all networks.

Answer: C

Explanation:

Creating specific firewall rules that restrict access directly to the application instance allows precise native network access control within the shared services VPC.

NEW QUESTION # 19

Google Cloud network services offer vast functionality and inter-connectivity between the cloud and on-premises networks. Which three additional functions does FortiGate offer when deployed in Google Cloud to complement the native services offered by Google Cloud? (Choose three.)

- A. Web filtering
- **B. SSL VPN**
- C. OSPF over IPSec
- **D. Secure SD-WAN with application visibility**
- **E. SSL inspection**

Answer: B,D,E

Explanation:

FortiGate provides SSL VPN capabilities for secure remote access.

It offers SSL inspection to decrypt and inspect encrypted traffic for threats.

FortiGate supports Secure SD-WAN with deep application visibility and control, enhancing network performance and security beyond native Google Cloud services.

NEW QUESTION # 20

.....

Do you want to obtain your FCP_GCS_AD-7.6 study materials as quickly as possible? If you do, then we will be your best choice. You can receive downloading link and password with ten minutes after buying. In addition, FCP_GCS_AD-7.6 exam dumps are high quality, because we have experienced experts to edit, and you can pass your exam by using FCP_GCS_AD-7.6 Exam Materials of us. In addition, we are pass guarantee and money back guarantee, if you fail to pass the exam by using FCP_GCS_AD-7.6 study materials of us, we will give you full refund. And the money will be returned to your payment account.
