

Pass Guaranteed 2026 Professional Juniper JN0-351: Reliable Enterprise Routing and Switching, Specialist (JNCIS-ENT) Exam Cost

BONUS!!! Download part of ITCertMagic JN0-351 dumps for free: <https://drive.google.com/open?id=19fODaW3BfTuYjDfvBpTejUwMHGlbM6tf>

The price for JN0-351 training materials is quite reasonable, and no matter you are a student at school or an employee in the company, you can afford the expense. You just think that you only need to spend some money, and you can pass the exam and get the certificate, which is quite self-efficient. In addition, JN0-351 Exam Dumps are edited by the professional experts, who are quite familiar with the professional knowledge and testing center, and the quality and accuracy can be guaranteed. We have 24 hours service stuff, and if you any questions about JN0-351 training materials, just contact us.

Practice tests for JN0-351 PdfDumps are best for self-assessment. This helps improve errors and strengthen preparation. The practice test is among the most beneficial features offered by ITCertMagic to make sure that applicants are successful. It is advised to attempt the test multiple times. Every time you attempt the test, you'll be provided with a thorough result report which can help you be able to keep track of your work without any difficulty.

Famous JN0-351 Exam Questions Bring You the Most Helpful Learning Dumps - ITCertMagic

Get the latest JN0-351 actual exam questions for JN0-351 Exam. You can practice the questions on practice software in simulated real JN0-351 exam scenario or you can use simple PDF format to go through all the real JN0-351 exam questions. Our products are better than all the cheap JN0-351 Exam braindumps you can find elsewhere, try free demo. You can pass your actual JN0-351 Exam in first attempt. Our JN0-351 exam material is good to pass the exam within a week. ITCertMagic is considered as the top preparation material seller for JN0-351 exam dumps, and inevitable to carry you the finest knowledge on JN0-351 exam certification syllabus contents.

Juniper JN0-351 Exam Syllabus Topics:

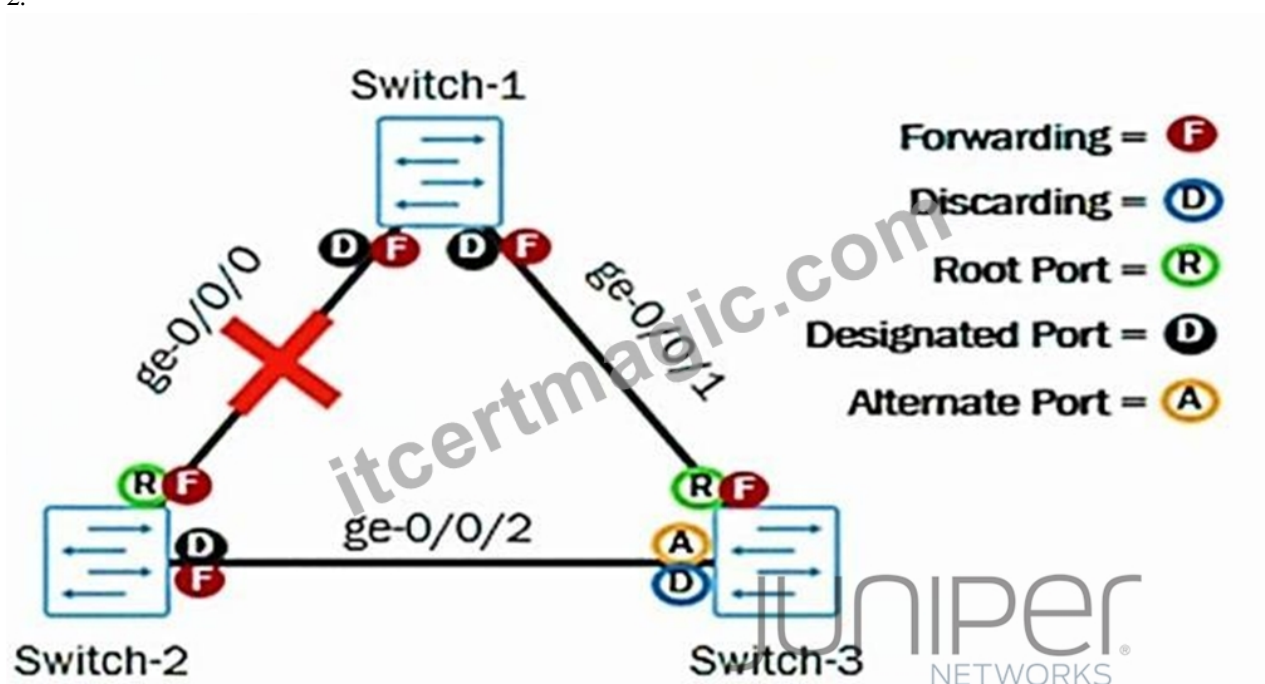

Topic	Details
Topic 1	<ul style="list-style-type: none">• Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.

Topic 2	<ul style="list-style-type: none"> Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.
Topic 3	<ul style="list-style-type: none"> OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.
Topic 4	<ul style="list-style-type: none"> BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q92-Q97):

NEW QUESTION # 92

You manage the Layer 2 network shown in the exhibit. You experience a failure on the ge-0/0/0 link between Switch-1 and Switch-2.

Which statement is correct about the expected behavior?

- A. Switch-2 will remove itself from the RSTP topology
- B. Switch-2's ge-0/0/2 port role and state will remain as designated and forwarding
- C. Switch-2's ge-0/0/2 port role and state will transition to root and forwarding
- D. Switch-2 will become the root bridge for a separate RSTP topology

Answer: C

NEW QUESTION # 93

You deployed a new EX Series switch with DHCP snooping enabled and you do not see any entries in the snooping databases for an interface. Which two Juniper configurations for that interface caused this issue? (Choose two.)

- A. MAC limiting is enabled on the interface.
- B. The interface is configured as a disabled port.
- C. Dynamic ARP inspection is enabled on the interface.
- D. The interface is configured as a trunk port.

Answer: B,D

Explanation:

A is correct because the interface is configured as a disabled port. A disabled port does not forward any traffic, including DHCP packets. Therefore, DHCP snooping cannot learn any MAC addresses or lease information from a disabled port.

C is correct because the interface is configured as a trunk port. By default, all trunk ports on the switch are trusted for DHCP snooping. This means that DHCP snooping does not inspect or filter any DHCP packets received on a trunk port. Therefore, DHCP snooping does not add any entries to the snooping database for a trunk port.

NEW QUESTION # 94

You have configured OSPF routing as shown in the exhibit. You notice that all interfaces have formed full adjacencies, with the exception of the interfaces connecting R3 and R4 with a status of 2Way.

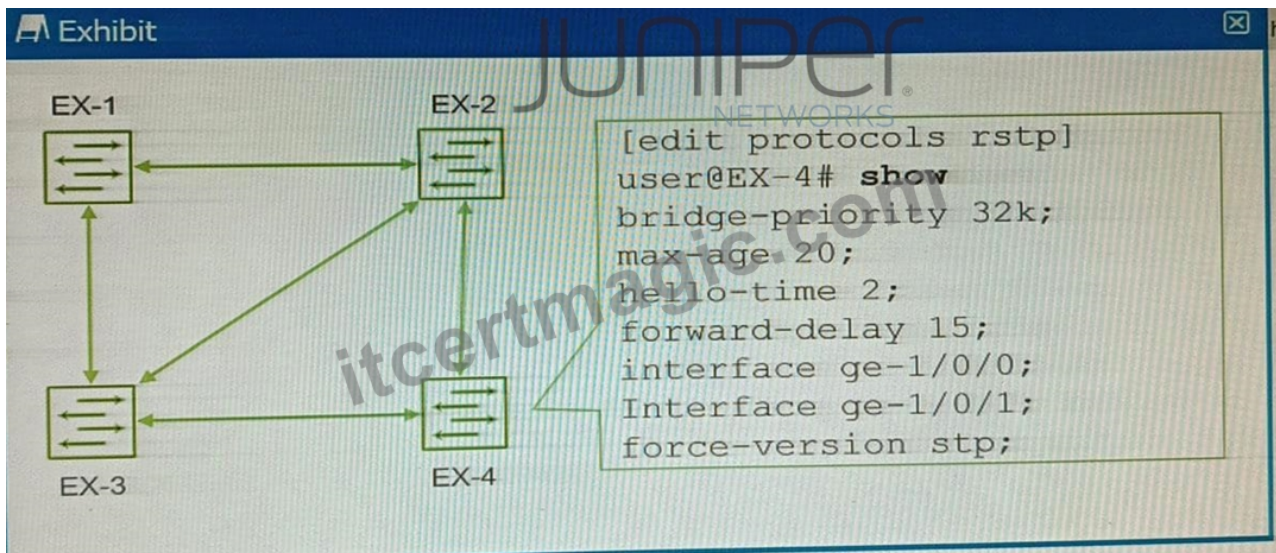

What is the reason for this status?

- A. DROther routers will not form a full adjacency with each other.
- B. The two routers must be configured in different areas.
- C. The interface-type is not configured as p2p.
- D. The two routers must both be configured as DR routers.

Answer: A

NEW QUESTION # 95

Exhibit.

You have configured the four EX Series switches with RSTP, as shown in the exhibit. You discover that whenever a link between switches goes up or down, the switches take longer than expected for RSTP to converge, using the default settings. In this scenario, which action would solve the delay in RSTP convergence?

- A. The bridge priority for EX-4 must be set at 4000.
- **B. The force-version must be removed.**
- C. The max-age must be increased to 20
- D. The hello-time must be increased.

Answer: B

Explanation:

The exhibit shows the configuration of RSTP on EX-4, which has the command `force-version stp`. This command forces the switch to use the legacy STP protocol instead of RSTP, even though the switch supports RSTP1. This means that EX-4 will not be able to take advantage of the faster convergence and enhanced features of RSTP, such as edge ports, link type, and proposal/agreement sequence2.

The other switches in the network are likely to be running RSTP, as it is the default protocol for EX Series switches3. Therefore, there will be a compatibility issue between EX-4 and the other switches, which will result in longer convergence times and suboptimal performance. The switch will also generate a warning message that says "Warning: STP version mismatch with neighbor" when it receives a BPDU from a RSTP neighbor1.

To solve this problem, the `force-version` command must be removed from EX-4, so that it can run RSTP natively and interoperate with the other switches in the network. This will enable faster convergence and better stability for the network topology. To remove the command, you can use the `delete protocols rstp force-version` command in configuration mode1.

NEW QUESTION # 96

Which statement about the default action of MAC limiting is true when the number of MAC addresses has hit the limit set?

- **A. The switch stops learning MAC addresses on the offending port, and any traffic to or from the offending MAC address will be dropped.**
- B. The switch stops learning MAC addresses on the offending port, but floods traffic out of all ports for the offending MAC address.
- C. The switch will shut down the offending port for five minutes.
- D. The switch will shut down MAC learning on the offending port for five minutes.

Answer: A

NEW QUESTION # 97

.....

As you know, your company will introduce new talent each year. In the face of their excellent resume, you must improve your strength to keep your position! Our JN0-351 study questions may be able to give you some help. What you need may be an internationally-recognized JN0-351 certificate, perhaps using the time available to complete more tasks. With our JN0-351 study
