- A. LF of 11001 less 27 days plus 1 day equaling 14 Jan 2024
- **B. LF of 11001 less duration of 11001 equaling 16 Jan 2024**
- C. LF of 1000 less 25 days equaling 16 Jan 2024
- D. LF of 11001 less 25 days plus 1 day equaling 16 Jan 2024

Answer: B

Explanation:

Late Start Formula:

* Late Start (LS) is calculated as $LF - \text{Duration}$.

* For Activity 11001: $LF - 25 = 16 \text{ Jan } 2024$

Cross-Verification with PSP Guidelines:

This formula aligns with the PSP methodology for backward pass calculations, where late start is directly computed from late finish and duration values (Ref: PSP Study Guide, Chapter 2A: Schedule Analysis).

NEW QUESTION # 177

Which of the following is NOT true?

- A. Remaining durations can exceed original durations.
- B. Constraints can interfere with the longest path calculation.
- C. Multiple calendars can affect the total float calculation.
- **D. A network must contain only one Critical Path.**

Answer: D

Explanation:

Explanation of Critical Path:

* A network can have multiple critical paths if multiple sequences of activities have zero float.

* While it is common to have one critical path, having more than one is possible in complex projects.

Evaluation of Other Options:

* A: Remaining durations exceeding original durations can occur in updated schedules due to delays.

* B: Constraints (e.g., finish-to-start, time constraints) can alter longest path calculations.

* C: Multiple calendars influence total float when activities use different working days.

Verification with PSP Guidelines:

The PSP Study Guide mentions the possibility of multiple critical paths in large or complex schedules (Ref: PSP Study Guide, Chapter 2A: Critical Path Analysis).

NEW QUESTION # 178

In its simplest form, what is the main drawback of critical path method scheduling?

- A. It allows for Precedence Diagramming Method to be used in place of Arrow Diagramming Method.
- **B. It assumes that resources are unlimited.**
- C. It doesn't account for interdependent between activities.
- D. It requires a backward pass to calculate late dates.

Answer: B
