The immediate downloading feature of our UiPath-ADPv1 certification guide is an eminent advantage of our products. Once the pay is done, our customers will receive an e-mail from our company. Our UiPath-ADPv1 exam study materials are available for downloading without any other disturbing requirements as long as you have paid successfully, which is increasingly important to an examinee as he or she has limited time for personal study for the UiPath-ADPv1 Exam. Therefore, our UiPath (ADPv1) Automation Developer Professional guide torrent is attributable to high-efficient learning as you will pass the UiPath-ADPv1 exam only after study for 20 to 30 hours.

We would like to benefit our customers from different countries who decide to choose our UiPath-ADPv1 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our study materials. Our leading experts aim to provide you the newest information in this field in order to help you to keep pace with the times and fill your knowledge gap. We can assure you that you will get the latest version of our UiPath-ADPv1 Training Materials for free from our company in the whole year after payment. Do not miss the opportunity to buy the best UiPath-ADPv1 preparation questions in the international market which will also help you to advance with the times.

UiPath UiPath-ADPv1 Practice Test Engine | Study UiPath-ADPv1 Center

Using our UiPath-ADPv1 study braindumps, you will find you can learn about the knowledge of your exam in a short time. Because

you just need to spend twenty to thirty hours on the practice exam, our UiPath UiPath-ADPv1 Study Materials will help you learn about all knowledge, you will successfully pass the UiPath UiPath-ADPv1 exam and get your certificate.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q97-Q102):

NEW QUESTION # 97

Which one of the following expressions Is the equivalent of the If activity from the picture?

- A. message = If(number mod 2 = 0 {"Odd number"} else {"Even number"})
- B. message = If(number mod 2 = 0. Odd number. Even number)
- C. message = If(number mod 2 = 0. "Even number", "Odd number")
- D. message = If(number mod 2 = 0 then "Odd number" else "Even number")

Answer: C

Explanation:

This expression evaluates if the number modulo 2 equals 0, which would mean it is even. If true, it assigns the string "Even number" to the variable message. If false (meaning the number is odd), it assigns "Odd number" to message

NEW QUESTION # 98

A developer aims to employ the REFramework for automating a business process that Involves a TransactionData collection (DataTable) comprising vendor names and addresses.

Instructions: Choose the appropriate variable type for the TransactionItem from the provided drop-down list in the following exhibit.

Answer:

Explanation:

The REFramework (Robotic Enterprise Framework) in UiPath is designed to work with transactional data. For a process that involves iterating over a DataTable where each row represents a transaction item, the appropriate variable type for the TransactionItem would be a DataRow.

In the context of REFramework, a DataRow is typically used to represent a single transaction item when the transaction data is contained within a DataTable. This allows the framework to process each row (or transaction) one by one.

Therefore, the correct variable type for the TransactionItem from the drop-down list should be DataRow.

NEW QUESTION # 99

Given the following list of arguments:

and the following code:

What is the value that will be displayed in the Output Panel at the end of the sequence below:

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The value that will be displayed in the Output Panel at the end of the sequence is 9. This is because the code in the Invoke Code activity is looping through the array in_numArray and setting the variable out_numVar to the highest value in the array. The array in_numArray has the values {1, 2, 7, 9, 4} as shown in the list of arguments. The variable out_numVar is initialized to 0. The For loop iterates from 0 to the upper bound of the array, which is 4. In each iteration, the If condition checks if the current element of the array is greater than the current value of out_numVar. If it is, then out_numVar is assigned to the current element of the array. Otherwise, out_numVar remains unchanged. Therefore, after the first iteration, out_numVar becomes 1. After the second iteration, out_numVar becomes 2. After the third iteration, out_numVar becomes 7. After the fourth iteration, out_numVar becomes 9. After the fifth iteration, out_numVar remains 9, since 4 is not greater than 9. The Write Line activity outputs the value of out_numVar to

the console, which is
9. References: Invoke Code

NEW QUESTION # 100

What is a pre-requisite for running InitAllApplications TestCase?

- A. Invoke SetTransactionStatus XAML file in Given.
- B. Invoke CloseAllApplications XAML file in Given.
- C. Invoke KillAllProcesses XAML file in Given.
- D. **Invoke InitAllSettings XAML file in Given.**

Answer: D

Explanation:

A test case is a set of steps and expected results that verify a certain functionality or behavior of an automation. A test case can be created in UiPath Studio or UiPath Test Manager, and it can contain both manual and automated steps. A test case can be executed manually or automatically, depending on the type of steps it contains.

A test case follows the Given-When-Then structure, which is a common format for writing test scenarios. The Given section describes the preconditions or initial state of the system before the test is executed. The When section describes the actions or events that trigger the test. The Then section describes the expected outcomes or postconditions of the test.

The InitAllApplications TestCase is a test case that verifies the initialization of all the applications that are used in the automation project. It is usually created in UiPath Studio, using the Test Cases feature. The InitAllApplications TestCase can be linked to the InitAllApplications.xaml workflow, which is a component of the REFramework template that opens and logs in to all the applications that are required for the automation.

The pre-requisite for running the InitAllApplications TestCase is to invoke the InitAllSettings.xaml file in the Given section of the test case. The InitAllSettings.xaml workflow is another component of the REFramework template that reads the configuration data from the Config.xlsx file and initializes the settings and assets for the automation project. By invoking the InitAllSettings.xaml file in the Given section, the test case ensures that the settings and assets are available and ready before opening and logging in to the applications.

The other options are not pre-requisites for running the InitAllApplications TestCase. Option B is incorrect, because the SetTransactionStatus.xaml file is not related to the initialization of applications, but to the setting of the status of a queue item after processing it. Option C is incorrect, because the CloseAllApplications.xaml file is not related to the initialization of applications, but to the closing of all the applications that were opened by the automation. Option D is incorrect, because the KillAllProcesses.xaml file is not related to the initialization of applications, but to the killing of all the processes that are associated with the automation.

NEW QUESTION # 101

Which command in the UiPath installation folder configures the UIPath.RemoteDebugging.Agent utility on a Windows robot to accept remote debugging requests from Studio?

- A. UIPath.RemoteDebuqqinq.Agent.exe start -port -password -verbose
- B. **UIPath-RemoteDebuqqinq.Agent.exe enable -port -password -verbose**
- C. dotnet ./UIPath.RemoteDebuqqinq.Agent.dll enable -port -password -verbose
- D. UIPath.RemoteDebuqqinq.Agent.exe enable -port -username -password -verbose

Answer: B
