To pass the certification exam, you need to select right SDLCSA study guide and grasp the overall knowledge points of the real exam. The test questions from our SDLCSA dumps collection cover almost content of the exam requirement and the real exam. Trying to download the free demo in our website and check the accuracy of SDLCSA Test Answers and questions. Getting certification will be easy for you with our materials.

Will you feel that the product you have brought is not suitable for you? One trait of our SDLCSA exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our SDLCSA exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our SDLCSA Study Materials, and know how to choose the different versions before you buy our products. On the other hand, using free trial downloading before purchasing, I can promise that you will have a good command of the function of our SDLCSA exam prepare. According to free trial downloading, you will know which version is more suitable for you in advance and have a better user experience.

Quiz 2026 Newest Supermicro Exam SDLCSA Testking

Supermicro is obliged to give you 12 months of free update checks to ensure the validity and accuracy of the Supermicro SDLCSA exam dumps. We also offer you a 100% money-back guarantee, in the very rare case of failure or unsatisfactory results. This puts your mind at ease when you are Supermicro SDLCSA Exam preparing with us.

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

Before removing the LPIO board from the PCIe tray, what other component needs to be removed first?

- A. Motherboard tray
- B. Air shroud
- C. GPU tray
- D. Metal bracket

Answer: D

Explanation:

The LPIO (Low-Profile IO) board in Supermicro systems like the SYS-421GE-TNHR2-LCC, part of the PCIe tray, is typically secured by a metal bracket that must be removed first. This bracket holds the LPIO board and associated cables (e.g., BMC cable) in place, as seen in similar designs (e.g., SYS-420GP-TNAR). Removing it involves unscrewing (often 2 screws) and lifting it off, granting access to the LPIO board. A (GPU tray) is a separate assembly, C (motherboard tray) is unrelated to the PCIe tray's LPIO, and D (air shroud) covers components but doesn't secure the board. Supermicro's DLC systems emphasize modular access, making B the correct step. References: Supermicro PCIe tray service guides, DLC system IO component layouts.

NEW QUESTION # 21

Aside from ESD gloves, what additional tools do you need to remove a DIMM?

- **A. No additional tools are needed**
- B. Torque bit and driver
- C. Long-nose pliers (in order to grasp the card)
- D. Screwdriver

Answer: A

Explanation:

Removing a DIMM (memory module) in Supermicro systems like the SYS-421GE-TNHR2-LCC requires only ESD gloves for safety; no additional tools are needed. DIMMs are released by pushing down on slot latches and lifting out by hand, per Supermicro manuals (e.g., SYS-420GP-TNAR). A (pliers) risks damage, B (torque bit) and D (screwdriver) are for screws, not DIMMs. Supermicro's DLC systems maintain standard DIMM serviceability, making C correct. References: Supermicro DIMM replacement guides, DLC system maintenance standards.

NEW QUESTION # 22

When removing the PCIe tray, where are the screws located and how many screws need to be loosened?

- **A. There are 4 screws that need to be loosened, two on each side of the front of the PCIe tray**
- B. There are 6 screws that need to be loosened, three on each side on the front of the PCIe tray
- C. There are 2 screws that need to be loosened, one on each side of the front of the PCIe tray
- D. There are 2 screws that need to be loosened, one on each side on the sides of the GPU tray

Answer: A

Explanation:

Removing the PCIe tray in the SYS-421GE-TNHR2-LCC requires loosening 4 screws, two on each side of the front, per Supermicro's standard tray removal (e.g., SYS-420GP-TNAR). This ensures secure detachment of the heavy, DLC-integrated tray. B (6 screws) is excessive, C misplaces screws to a GPU tray's sides, and D (2 screws) under-secures. Supermicro's DLC systems balance stability and serviceability, making A correct. References: Supermicro PCIe tray removal guides, DLC system tray specs.

NEW QUESTION # 23

What are the full steps and proper order for removing the LPIO board from the PCIe tray?

- A. Remove a few AOC NIC cards > Remove PCIe tray > Remove motherboard tray
- B. Remove metal bracket holding down LPIO board > Remove PCIe air shroud > Remove internal fans
- **C. Remove PCIe air shroud > Remove all AOC NIC cards > Remove metal bracket holding down LPIO board**
- D. Remove GPU > Remove metal bracket holding down LPIO board > Remove 3 or 4 AOC NIC cards

Answer: C

Explanation:

Removing the LPIO (Low-Profile IO) board from the PCIe tray in the SYS-421GE-TNHR2-LCC involves:

* Remove PCIe air shroud: Clears access to components (standard in Supermicro designs).

* Remove all AOC NIC cards: Disconnects cards on the LPIO board for unobstructed removal.

* Remove metal bracket holding down LPIO board: Unscrews (typically 2 screws) the bracket securing the board. Option B follows Supermicro's logical service order (e.g., SYS-420GP-TNAR), ensuring safe access in DLC systems. A (GPU) is unrelated, C (tray removals) is excessive, and D (fans) is irrelevant. B aligns with Supermicro's DLC modularity, making it correct. References: Supermicro PCIe tray service guides, DLC system IO removal protocols.

NEW QUESTION # 24

Before the fan board can be removed from the motherboard tray, all 4 of the fans' power connectors must be disconnected. True or False.

- A. False
- **B. True**

Answer: B

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, the fan board connects multiple fans (often 4 in high-end setups) to the motherboard tray. Removing the fan board requires disconnecting all 4 fans' power connectors first to avoid damage or electrical hazards, a standard step in Supermicro's service guides (e.g., SYS-420GP-TNAR). Even in DLC systems, where liquid cooling dominates, fans supplement air cooling, and their power must be safely disconnected. True (A) reflects Supermicro's safety and maintenance protocols, making it correct over B.
