

HP HPE7-A11 100% Exam Coverage - Online HPE7-A11 Tests

Through our investigation and analysis of the real problem over the years, our HPE7-A11 prepare questions can accurately predict the annual HPE7-A11 exams. In the actual exam process, users will encounter almost half of the problem is similar in our products. Even if the syllabus is changing every year, the HPE7-A11 quiz guide's experts still have the ability to master propositional trends. Believe that such a high hit rate can better help users in the review process to build confidence, and finally help users through the qualification examination to obtain a certificate. All in all, we want you to have the courage to challenge yourself, and our HPE7-A11 Exam Prep will do the best for the user's expectations.

ExamsLabs facilitates you with three different formats of its HPE7-A11 exam study material. These HPE7-A11 exam dumps formats make it comfortable for every HP HPE7-A11 test applicant to study according to his objectives. Users can download a free HPE7-A11 demo to evaluate the formats of our HPE7-A11 Practice Exam material before purchasing. Three HPE7-A11 exam questions formats that we have are HPE7-A11 dumps PDF format, web-based HPE7-A11 practice exam and desktop-based HPE7-A11 practice test software.

Online HPE7-A11 Tests | Free HPE7-A11 Test Questions

When you see other people in different industry who feel relaxed with high salary, do you want to try another field? And is the difficulty of learning a new piece of knowledge often deterring you? It doesn't matter, now HPE7-A11 practice exam offers you a great opportunity to enter a new industry. Our HPE7-A11 learning material was compiled from the wisdom and sweat of many industry experts. And it is easy to learn and understand our HPE7-A11 exam questions.

HPE Network Campus Access Professional Architect Exam Sample Questions (Q73-Q78):

NEW QUESTION # 73

When designing a high-availability network, which two factors should be prioritized? (Choose two.)

- A. Redundant links and failover mechanisms
- B. Automatic load balancing for traffic distribution
- C. Using a single network path for all connections
- D. Disabling firewall protections to increase throughput

Answer: A,B

NEW QUESTION # 74

What is one use case for designing a 2-tier campus LAM instead of using a 3-tier?

- A. Cross-campus traffic has grown beyond the capacity of a single collapsed core
- **B. The campus has small buildings with only a few wiring closets.**
- C. The network has grown beyond a few building aggregation points
- D. Access aggregation points are not scaling to meet traffic demands.

Answer: B

Explanation:

A 2-tier campus LAN architecture, consisting of the core and access layers, is typically suitable for smaller campuses or networks with limited numbers of wiring closets. This simplified architecture eliminates the need for a dedicated aggregation layer, which is more common in larger, more complex network environments (the 3-tier architecture). In a small campus setting with only a few wiring closets, a 2-tier design can provide sufficient performance and scalability, reducing complexity and potentially lowering costs. This architecture allows for direct connectivity between the access layer, where end devices connect to the network, and the core layer, which routes traffic to and from the campus network. The use of a 2-tier architecture in such scenarios is driven by the network's size and the simplicity of its requirements, making it an efficient and effective choice.

NEW QUESTION # 75

Drag and Drop Question

Select the appropriate fiber optic standard for the given link speed.

Answer:

Explanation:

NEW QUESTION # 76

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sq m). Data centers are all

offsite and will be out of scope for this project. The customer is underserved by its existing L2- based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services.

The client decided that they would like to manage two wiring closets as a single stack with a total of 10 switches and a minimum transport speed of 25Gbps over OM4 MM fiber. They would also like to keep the stacking cabling cost to a minimum.

Which switch series would most economically accomplish these requirements?

- A. 6200F Switch Series
- **B. 6300F Switch Series**
- C. 6400 Switch Series
- D. 6100 Switch Series

Answer: B

Explanation:

The Aruba 6300F Switch Series is designed to meet the needs of modern, full-stack wired and wireless networks with a focus on cost-effectiveness, performance, and scalability. This series supports high-speed connectivity options, including 25Gbps over OM4 MM fiber, making it suitable for the client's requirement to manage two wiring closets as a single stack with a total of 10 switches. The 6300F series also offers the flexibility of modular uplinks and stacking capabilities, ensuring that the client's needs for minimum transport speed and economic efficiency are met. Additionally, the Aruba 6300F series is known for its energy efficiency and lower operational costs, further contributing to its economic value.

NEW QUESTION # 77

ACME retail has 38 locations spread out across Ave US states and two provinces in Canada.

They are looking to grow 20% over the next two years. They have an HO with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location. The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 st) m) and the Canadian warehouse is 130K sq ft (12100 sq ml. The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sqm) and smaller stores are planned at 25,000 sq ft '2320 sq ml. The locations need to expand the abilities to vendors that need to add setup displays or Interactive kiosks in the stores. The current Infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5. and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store. Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current pbx system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would like to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half. The office has an MDF and two IDF's located on floors one and two. The HOF is in the basement, and you have multiple WAN circuits for the HO links. Each store has a local handoff from the cable company (ethernet) in the middle of the store in the office, so distance for the wiring is not an issue. The customer has budget concerns but does want something that could last 7+ years. Based on the scenario, where would you look to add additional items to the BOM to aid the company goals? (Select three.)

- **A. Marketing**
- **B. Finance Team**
- C. Security Team/CISO
- D. Customer Experience Officer
- E. Sales Management
- **F. Building Facilities**

Answer: A,B,F

Explanation:

In addressing the company's goals and the challenges presented in the scenario, adding items to the Bill of Materials (BOM) that would involve the Building Facilities team could include infrastructure upgrades like improved cabling (moving from Cat5 to a higher category) or enhancements to support the new wireless and VoIP systems. For the Marketing team, technologies that could enable better interaction with customers, such as location-based services or analytics tools, would be beneficial. These could help in understanding customer behavior within the stores and tailoring marketing efforts accordingly. Finally, input from the Finance Team would be essential in ensuring that the solutions chosen fit within the budget constraints and offer a good return on investment, especially considering the company's desire for a solution that could last 7+ years and support their growth plans.

NEW QUESTION # 78
