

CLF-C02 Reliable Exam Sample - Top CLF-C02 Dumps

P.S. Free 2026 Amazon CLF-C02 dumps are available on Google Drive shared by DumpsTorrent: https://drive.google.com/open?id=1E5k-kjZCVmiMnUJisB-WT_WhbvtjyX

Our staff will provide you with services 24/7 online whenever you have problems on our CLF-C02 exam questions. Starting from your first contact with our CLF-C02 practice engine, no matter what difficulties you encounter, you can immediately get help. You can contact us by email or find our online customer service. We will solve your problem as soon as possible. And no matter you have these problem before or after your purchase our CLF-C02 Learning Materials, you can get our guidance right away.

If you are a college student, you can learn and use online resources through the student learning platform over the CLF-C02 study materials. And for an office worker, the CLF-C02 study engine is designed to their different learning arrangement as well, such extensive audience greatly improved the core competitiveness of our CLF-C02 practice quiz, which is according to their aptitude, on-demand, maximum to provide users with better suited to their specific circumstances.

Top CLF-C02 Dumps, CLF-C02 Book Free

In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining CLF-C02 is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the CLF-C02 Exam to establish your expertise in your field and receive certification. However, passing the AWS Certified Cloud Practitioner CLF-C02 exam is challenging.

Amazon CLF-C02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Security and Compliance: This section involves understanding the shared responsibility framework of AWS in addition to compliance and governance. It also involves exploring the management capabilities of AWS by exploring its security capabilities.

Topic 2	<ul style="list-style-type: none"> • Billing, Pricing, and Support: This section contrasts pricing methods and budgeting resources management. It also tests understanding of billing methods, identifying support options, and technical resources.
Topic 3	<ul style="list-style-type: none"> • Cloud Concepts: This section involves knowledge of value proposition and exploring design rules of AWS. It covers the advantages of techniques for moving over to AWS cloud and developing a good understanding of cloud economics.
Topic 4	<ul style="list-style-type: none"> • Cloud Technology and Services: Describe ways to access AWS services in AWS Cloud and explore connectivity options. It deals with defining the global infrastructure of AWS, computing services, and network services.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q355-Q360):

NEW QUESTION # 355

A company needs to set a maximum spending limit on AWS services each month. The company also needs to set up alerts for when the company reaches its spending limit.

Which AWS service or tool should the company use to meet these requirements?

- **A. AWS Budgets**
- B. AWS Trusted Advisor
- C. Cost Explorer
- D. Service Quotas

Answer: A

Explanation:

Explanation

AWS Budgets is a service that helps you plan your service usage, service costs, and instance reservations, and track how close your plan is to your budgeted amount. You can set custom budgets that alert you when you exceed (or are forecasted to exceed) your budgeted thresholds. You can also use AWS Budgets to set a maximum spending limit on AWS services each month and set up alerts for when you reach your spending limit. Cost Explorer is a service that enables you to visualize, understand, and manage your AWS costs and usage over time. You can use Cost Explorer to view charts and graphs that show how your costs are trending, identify areas that need further inquiry, and see the impact of your cost management actions. However, Cost Explorer does not allow you to set a maximum spending limit or alerts for your AWS services. AWS Trusted Advisor is a service that provides you real time guidance to help you provision your resources following AWS best practices, including security and performance. It can help you monitor for cost optimization opportunities, such as unused or underutilized resources, but it does not allow you to set a maximum spending limit or alerts for your AWS services. Service Quotas is a service that enables you to view and manage your quotas, also referred to as limits, from a central location. Quotas, also referred to as limits, are the maximum number of resources that you can create in your AWS account. However, Service Quotas does not allow you to set a maximum spending limit or alerts for your AWS services.

NEW QUESTION # 356

A company wants to migrate its applications to the AWS Cloud. The company plans to identify and prioritize any business transformation opportunities and evaluate its AWS Cloud readiness. Which AWS service or tool should the company use to meet these requirements?

- A. AWS Migration Hub
- **B. AWS Cloud Adoption Framework (AWS CAF)**
- C. AWS Managed Services (AMS)
- D. AWS Well-Architected Framework

Answer: B

Explanation:

AWS Cloud Adoption Framework (AWS CAF) is a set of best practices, tools, and guidance that helps organizations get started with cloud technologies. AWS CAF helps organizations identify and prioritize transformation opportunities, evaluate and improve their cloud readiness, and iteratively evolve their transformation roadmap. AWS CAF groups its capabilities in six perspectives:

Business, People, Governance, Platform, Security, and Operations. Each perspective comprises a set of capabilities that functionally related stakeholders own or manage in the cloud transformation journey¹ AWS Managed Services (AMS) is a service that operates AWS infrastructure on behalf of customers, providing a secure AWS Landing Zone, features that help meet various compliance program requirements, a proven enterprise operating model, on-going cost optimization, and day-to-day infrastructure management. AMS does not help customers identify and prioritize business transformation opportunities or evaluate their cloud readiness² AWS Well-Architected Framework is a set of six pillars and lenses that help cloud architects design and run workloads in the cloud. It provides a consistent approach for customers and AWS Partners to evaluate and implement designs that scale with their needs. AWS Well-Architected Framework helps customers understand the pros and cons of decisions they make while building systems on AWS, but it does not help them identify and prioritize business transformation opportunities³ AWS Migration Hub is a tool that lets customers discover, plan, and track their existing servers and applications for migration to AWS. It offers journey templates, cross-team collaboration, application and server discovery, strategy recommendations, orchestration and simple dashboard. AWS Migration Hub simplifies the migration and modernization process, but it does not help customers identify and prioritize business transformation opportunities or evaluate their cloud readiness⁴

NEW QUESTION # 357

Which VPC component provides a layer of security at the subnet level?

- A. Route tables
- B. Security groups
- C. Network ACLs
- D. NAT gateways

Answer: C

Explanation:

Explanation

Network ACLs are a feature that provide a layer of security at the subnet level by acting as a firewall to control traffic in and out of one or more subnets. Network ACLs can be configured with rules that allow or deny traffic based on the source and destination IP addresses, ports, and protocols⁵. Security groups are a feature that provide a layer of security at the instance level by acting as a firewall to control traffic to and from one or more instances. Security groups can be configured with rules that allow or deny traffic based on the source and destination IP addresses, ports, protocols, and security groups. NAT gateways are a feature that enable instances in a private subnet to connect to the internet or other AWS services, but prevent the internet from initiating a connection with those instances. Route tables are a feature that determine where network traffic from a subnet or gateway is directed.

NEW QUESTION # 358

A company has a MySQL database running on a single Amazon EC2 instance. The company now requires higher availability in the event of an outage.

Which set of tasks would meet this requirement?

- A. Add an Application Load Balancer in front of the EC2 instance.
- B. Configure EC2 Auto Recovery to move the instance to another Availability Zone.
- C. Migrate to Amazon RDS and enable Multi-AZ.
- D. Enable termination protection for the EC2 instance to avoid outages.

Answer: C

Explanation:

The set of tasks that would meet the requirement of having higher availability for a MySQL database running on a single Amazon EC2 instance is to migrate to Amazon RDS and enable Multi-AZ. Amazon RDS is a fully managed relational database service that supports MySQL and other popular database engines. By enabling Multi-AZ, users can have a primary database in one Availability Zone and a synchronous standby replica in another Availability Zone. In case of a planned or unplanned outage of the primary database, Amazon RDS automatically fails over to the standby replica with minimal disruption³. Adding an Application Load Balancer in front of the EC2 instance, configuring EC2 Auto Recovery to move the instance to another Availability Zone, or enabling termination protection for the EC2 instance would not provide higher availability for the database, as they do not address the single point of failure or data replication issues.

NEW QUESTION # 359

A company wants to create a set of custom dashboards to collect metrics to monitor its applications. Which AWS service will meet these requirements?

- A. AWS CloudTrail
- B. AWS Systems Manager
- C. AWS X-Ray
- D. Amazon CloudWatch

Answer: D

Explanation:

Explanation

Amazon CloudWatch is a service that provides monitoring and observability for AWS resources and applications. Users can create custom dashboards to collect and visualize metrics, logs, alarms, and events from different sources. AWS X-Ray is a service that provides distributed tracing and analysis for applications. AWS Systems Manager is a service that provides operational management for AWS resources and applications. AWS CloudTrail is a service that provides governance, compliance, and auditing for AWS account activity.

NEW QUESTION # 360

.....

There have been tens of thousands of our loyal customers who chose to buy our CLF-C02 exam questions and get their certification. These people have already had a good job opportunity and are running on their way to fulfilling their dreams after using CLF-C02 practice quiz! Want to be like them, you must also act! Time and tide wait for no man. And you can free download the demos of the CLF-C02 study guide, you can have a try before purchase.
