問題 #99

Your on-premises network contains a VPN device.

You have an Azure subscription that contains a virtual network and a virtual network gateway.

You need to create a Site-to-Site VPN connection that has a custom cryptographic policy.

How should you complete the PowerShell script? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案:

解題說明:

問題 #100

You have an Azure subscription that contains the following resources:

- A virtual network named Vnet1
- Two subnets named subnet1 and AzureFirewallSubnet
- A public Azure Firewall named FW1
- A route table named RT1 that is associated to Subnet1
- A rule routing of 0.0.0.0/0 to FW1 in RT1

After deploying 10 servers that run Windows Server to Subnet1, you discover that none of the virtual machines were activated. You need to ensure that the virtual machines can be activated.

What should you do?

- A. Add an internet route to RT1 for the Azure Key Management Service (KMS).
- B. Deploy a NAT gateway.
- C. On FW1, configure a DNAT rule for port 1688
- D. To Subnet1, associate a network security group (NSG) that allows outbound access to port 1688.

答案: A

解題說明:

Add specific outbound rule for KMS in the FW as there is already default route points FW.

Add specific address prefix route in route table so it can by pass default route to FW.

問題 #101

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
App1	Azure App Service	A web app
Gateway1	Azure Application Gateway	includes an SSL certificate that has a subject name of *.contoso.com

Gateway1

provides access to App1 by using a URL of <http://app1.contoso.com>.

You create a new web app named App2.

You need to configure Gateway1 to enable minimize administrative effort.

What should you configure on Gateway1?

- A. a listener and a backend pool
- **B. a listener and a routing rule**
- C. a backend pool and a routing
- D. a listener, a backend pool, and a rule

答案： B

問題 #102

You have an Azure virtual network named Vnet1 that contains two subnets named Subnet1 and Subnet2.

You have the NAT gateway shown in the NATgateway1 exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
VM1 can communicate outbound by using NATgateway1	☐	☐
The virtual machines in Subnet2 communicate outbound by using NATgateway1	☐	☐
All the virtual machines that use NATgateway1 to connect to the internet use the same public IP address	☐	☐

答案：

解題說明：

Statements	Yes	No
VM1 can communicate outbound by using NATgateway1	☐	☒
The virtual machines in Subnet2 communicate outbound by using NATgateway1	☒	☐
All the virtual machines that use NATgateway1 to connect to the internet use the same public IP address	☐	☒

Explanation

Statements	Yes	No
VM1 can communicate outbound by using NATgateway1	☐	☒
The virtual machines in Subnet2 communicate outbound by using NATgateway1	☒	☐
All the virtual machines that use NATgateway1 to connect to the internet use the same public IP address	☐	☒

Box 1: No

VM1 is in Zone2 whereas the NAT Gateway is in Zone1. The VM would need to be in the same zone as the NAT Gateway to be able to use it. Therefore, VM1 cannot use the NAT gateway.

Box 2: Yes

NATgateway1 is configured in the settings for Subnet2.

Box 3: No

The NAT gateway does not have a single public IP address, it has an IP prefix which means more than one IP address. The VMs the use the NAT Gateway can use different public IP addresses contained within the IP prefix.
