

# New ARA-C01 Exam Pass4sure | Practice ARA-C01 Exams Free

What's more, part of that PDFBrain.dumps ARA-C01 dumps now are free: <https://drive.google.com/open?id=1uEoxV96dyVhfHybERnDwQMSmlyH484T4>

The only goal of all experts and professors in our company is to design the best and suitable ARA-C01 study materials for all people. According to the different demands of many customers, they have designed the three different versions of the ARA-C01 certification study guide materials for all customers: PDF, Soft and APP versions. They sincerely hope that all people who use ARA-C01 Exam Questions from our company can pass the ARA-C01 exam and get the related certification successfully. And our pass rate for ARA-C01 exam questions is high as more than 98%.

Your selection on the right tool to help you pass the ARA-C01 exam and get the according certification matters a lot for the right ARA-C01 exam braindumps will spread you a lot of time and efforts. Our ARA-C01 Study Guide is the most reliable and popular exam product in the market for we only sell the latest ARA-C01 practice engine to our clients and you can have a free trial before your purchase.

## SnowPro Advanced Architect Certification Exam Practice Questions & ARA-C01 Free Download Pdf & SnowPro Advanced Architect Certification Valid Training Material

Failure makes people depressed especially for working engineers. If your test score affects your work and you make mistakes, it is lost than gained. The best method for working people is to purchase valid Snowflake ARA-C01 test questions and answers. It only takes you a little money to solve a big difficult for you. Also once you pass this subject, the certification is coming to you. Our passing rate of ARA-C01 Test Questions and answers is normally 100% just one shot. It is worth buying.

Snowflake ARA-C01 exam is a rigorous and comprehensive test of a candidate's knowledge and skills. ARA-C01 exam consists of 90 multiple-choice and multiple-response questions that need to be answered in a time frame of 2 hours. ARA-C01 exam covers a

wide range of topics, from Snowflake's architecture and data warehousing concepts to advanced features like Snowflake's data sharing and multi-cluster warehouses. ARA-C01 Exam also tests the candidate's ability to design and implement complex data solutions using Snowflake's platform.

## Snowflake SnowPro Advanced Architect Certification Sample Questions (Q225-Q230):

### NEW QUESTION # 225

Role A has the following permissions:

- . USAGE on db1
- . USAGE and CREATE VIEW on schemal in db1
- . SELECT on table1 in schemal

Role B has the following permissions:

- . USAGE on db2
- . USAGE and CREATE VIEW on schema2 in db2
- . SELECT on table2 in schema2

A user has Role A set as the primary role and Role B as a secondary role.

What command will fail for this user?

- A. use database db1;  
use schema schemal;  
select \* from db2.schema2.table2;
- B. use database db2;  
use schema schema2;  
select \* from db1.schemal.table1 union select \* from table2;
- C. use database db1;  
use schema schemal;  
create view v1 as select \* from db2.schema2.table2;
- **D. use database db2;  
use schema schema2;  
create view v2 as select \* from db1.schemal.table1;**

**Answer: D**

Explanation:

This command will fail because while the user has USAGE permission on db2 and schema2 through Role B, and can create a view in schema2, they do not have SELECT permission on db1.schemal.table1 with Role B. Since Role A, which has SELECT permission on db1.schemal.table1, is not the currently active role when the view v2 is being created in db2.schema2, the user does not have the necessary permissions to read from db1.schemal.table1 to create the view. Snowflake's security model requires that the active role have all necessary permissions to execute the command.

### NEW QUESTION # 226

A company's daily Snowflake workload consists of a huge number of concurrent queries triggered between 9pm and 11pm. At the individual level, these queries are smaller statements that get completed within a short time period.

What configuration can the company's Architect implement to enhance the performance of this workload?

(Choose two.)

- **A. Enable a multi-clustered virtual warehouse in maximized mode during the workload duration.**
- B. Reduce the amount of data that is being processed through this workload.
- C. Increase the size of the virtual warehouse to size X-Large.
- D. Set the connection timeout to a higher value than its default.
- **E. Set the MAX\_CONCURRENCY\_LEVEL to a higher value than its default value of 8 at the virtual warehouse level.**

**Answer: A,E**

Explanation:

Explanation

These two configuration options can enhance the performance of the workload that consists of a huge number of concurrent queries that are smaller and faster.

\* Enabling a multi-clustered virtual warehouse in maximized mode allows the warehouse to scale out automatically by adding more

clusters as soon as the current cluster is fully loaded, regardless of the number of queries in the queue. This can improve the concurrency and throughput of the workload by minimizing or preventing queuing. The maximized mode is suitable for workloads that require high performance and low latency, and are less sensitive to credit consumption<sup>1</sup>.

\* Setting the MAX\_CONCURRENCY\_LEVEL to a higher value than its default value of 8 at the virtual warehouse level allows the warehouse to run more queries concurrently on each cluster. This can improve the utilization and efficiency of the warehouse resources, especially for smaller and faster queries that do not require a lot of processing power. The MAX\_CONCURRENCY\_LEVEL parameter can be set when creating or modifying a warehouse, and it can be changed at any time<sup>2</sup>.

\* Snowflake Documentation: MAX\_CONCURRENCY\_LEVEL

### NEW QUESTION # 227

An Architect is implementing a CI/CD process. When attempting to clone a table from a production to a development environment, the cloning operation fails.

What could be causing this to happen?

- **A. The table has a masking policy.**
- B. Tables cannot be cloned from a higher environment to a lower environment.
- C. The table is transient.
- D. The retention time for the table is set to zero.

**Answer: A**

Explanation:

Cloning a table with a masking policy can cause the cloning operation to fail because the masking policy is not automatically cloned with the table. This is due to the fact that the masking policy is considered a separate object with its own set of privileges<sup>1</sup>.

Snowflake Documentation on Cloning Considerations<sup>1</sup>.

### NEW QUESTION # 228

How is the change of local time due to daylight savings time handled in Snowflake tasks? (Choose two.)

- **A. A task scheduled in a UTC-based schedule will have no issues with the time changes.**
- B. A frequent task execution schedule like minutes may not cause a problem, but will affect the task history.
- **C. Task schedules can be designed to follow specified or local time zones to accommodate the time changes.**
- D. A task schedule will follow only the specified time and will fail to handle lost or duplicated hours.
- E. A task will move to a suspended state during the daylight savings time change.

**Answer: A,C**

Explanation:

According to the Snowflake documentation<sup>1</sup> and the web search results<sup>2</sup>, these two statements are true about how the change of local time due to daylight savings time is handled in Snowflake tasks. A task is a feature that allows scheduling and executing SQL statements or stored procedures in Snowflake. A task can be scheduled using a cron expression that specifies the frequency and time zone of the task execution.

A task scheduled in a UTC-based schedule will have no issues with the time changes. UTC is a universal time standard that does not observe daylight savings time. Therefore, a task that uses UTC as the time zone will run at the same time throughout the year, regardless of the local time changes<sup>1</sup>.

Task schedules can be designed to follow specified or local time zones to accommodate the time changes.

Snowflake supports using any valid IANA time zone identifier in the cron expression for a task. This allows the task to run according to the local time of the specified time zone, which may include daylight savings time adjustments. For example, a task that uses Europe/London as the time zone will run one hour earlier or later when the local time switches between GMT and BST<sup>12</sup>.

Snowflake Documentation: Scheduling Tasks

Snowflake Community: Do the timezones used in scheduling tasks in Snowflake adhere to daylight savings?

### NEW QUESTION # 229

There are two databases in an account, named `fin_db` and `hr_db` which contain payroll and employee data, respectively. Accountants and Analysts in the company require different permissions on the objects in these databases to perform their jobs. Accountants need read-write access to `fin_db` but only require read-only access to `hr_db` because the database is maintained by human resources personnel. An Architect needs to create a read-only role for certain employees working in the human resources department. Which permission sets must be granted to this role?

- A. USAGE on database `hr_db`, USAGE on all schemas in database `hr_db`, SELECT on all tables in database `hr_db`
- B. USAGE on database `hr_db`, USAGE on all schemas in database `hr_db`, REFERENCES on all tables in database `hr_db`
- C. USAGE on database `hr_db`, SELECT on all schemas in database `hr_db`, SELECT on all tables in database `hr_db`
- D. MODIFY on database `hr_db`, USAGE on all schemas in database `hr_db`, USAGE on all tables in database `hr_db`

**Answer: A**

Explanation:

\* To create a read-only role for certain employees working in the human resources department, the role needs to have the following permissions on the `hr_db` database:

\* USAGE on the database: This allows the role to access the database and see its schemas and objects.

\* USAGE on all schemas in the database: This allows the role to access the schemas and see their objects.

\* SELECT on all tables in the database: This allows the role to query the data in the tables.

\* Option A is the correct answer because it grants the minimum permissions required for a read-only role on the `hr_db` database.

\* Option B is incorrect because SELECT on schemas is not a valid permission. Schemas only support USAGE and CREATE permissions.

\* Option C is incorrect because MODIFY on the database is not a valid permission. Databases only support USAGE, CREATE, MONITOR, and OWNERSHIP permissions. Moreover, USAGE on tables is not sufficient for querying the data. Tables support SELECT, INSERT, UPDATE, DELETE, TRUNCATE, REFERENCES, and OWNERSHIP permissions.

\* Option D is incorrect because REFERENCES on tables is not relevant for querying the data.

REFERENCES permission allows the role to create foreign key constraints on the tables.
