## Pass Guaranteed Quiz 2026 Professional-Cloud-Database-Engineer: Google Cloud Certified - Professional Cloud Database Engineer Latest Cheap Dumps

All these Professional-Cloud-Database-Engineer exam dumps formats contain real, updated, and error-free Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) exam questions that prepare you for the final Professional-Cloud-Database-Engineer exam. To give you an idea about the top features of Professional-Cloud-Database-Engineer Exam Dumps, a free demo download facility is being offered to Google Cloud Certified - Professional Cloud Database Engineer candidates. This free Professional-Cloud-Database-Engineer exam questions demo download facility is available in all three Professional-Cloud-Database-Engineer exam dumps formats.

Google Cloud Certified - Professional Cloud Database Engineer exam is a certification that validates the skills and expertise of professionals in designing, developing, and managing scalable and reliable databases on the Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification is designed for individuals who have a deep understanding of database architecture, data modeling, and data management technologies. Professional-Cloud-Database-Engineer exam is intended for professionals who have hands-on experience in designing, deploying, and managing databases on Google Cloud Platform.

Google Professional-Cloud-Database-Engineer Certification is recognized as a valuable credential by employers and IT professionals alike. It demonstrates that the holder has the skills and knowledge required to design, develop, and manage databases on the Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification can help individuals advance their careers and open up new opportunities for them in the field of cloud computing.

## Google Cloud Certified - Professional Cloud Database Engineer Sample

## Questions (Q125-Q130):

### NEW QUESTION # 125

You are migrating your data center to Google Cloud. You plan to migrate your applications to Compute Engine and your Oracle databases to Bare Metal Solution for Oracle. You must ensure that the applications in different projects can communicate securely and efficiently with the Oracle databases. What should you do?

- A. Set up a Shared VPC, configure multiple service projects, and create firewall rules.
- B. Set up Private Service Connect.
- C. Set up Serverless VPC Access.
- D. Set up Traffic Director.

**Answer: A**

Explanation:

<https://medium.com/google-cloud/shared-vpc-in-google-cloud-64527e0a409e#:~:text=Unlike%20VPC%20peering%2C%20Shared%20VPC%20connects%20projects%20within%20the%20same%20organization.&text=There%20are%20a%20lot%20of,between%20VPCs%20in%20different%20projects.>

### NEW QUESTION # 126

Your ecommerce application connecting to your Cloud SQL for SQL Server is expected to have additional traffic due to the holiday weekend. You want to follow Google-recommended practices to set up alerts for CPU and memory metrics so you can be notified by text message at the first sign of potential issues. What should you do?

- A. Use Error Reporting to monitor CPU and memory metrics and to configure SMS notification channels.
- B. Use Cloud Monitoring to set up an alerting policy for CPU and memory metrics and to configure SMS notification channels.
- C. Use Cloud Logging to set up a log sink for CPU and memory metrics and to configure a sink destination to send a message to Pub/Sub.
- D. Use a Cloud Function to pull CPU and memory metrics from your Cloud SQL instance and to call a custom service to send alerts.

**Answer: B**

Explanation:

Cloud Monitoring collects metrics, events, and metadata from Google Cloud, Amazon Web Services (AWS), hosted uptime probes, and application instrumentation. Using the BindPlane service, you can also collect this data from over 150 common application components, on-premise systems, and hybrid cloud systems.

### NEW QUESTION # 127

Your organization works with sensitive data that requires you to manage your own encryption keys. You are working on a project that stores that data in a Cloud SQL database. You need to ensure that stored data is encrypted with your keys. What should you do?

- A. Export data periodically to a Cloud Storage bucket protected by Customer-Supplied Encryption Keys.
- B. Use customer-managed encryption keys with Cloud SQL.
- C. Connect to Cloud SQL using a connection that has SSL encryption.
- D. Use Cloud SQL Auth proxy.

**Answer: B**

### NEW QUESTION # 128

Your company is developing a new global transactional application that must be ACID-compliant and have 99.999% availability. You are responsible for selecting the appropriate Google Cloud database to serve as a datastore for this new application. What should you do?

- A. Use Bigtable.

- B. Use Cloud Spanner.
- C. Use Cloud SQL.
- D. Use Firestore.

**Answer: B**

#### NEW QUESTION # 129

You are writing an application that will run on Cloud Run and require a database running in the Cloud SQL managed service. You want to secure this instance so that it only receives connections from applications running in your VPC environment in Google Cloud. What should you do?

- A. 1. Create your instance with a specified external (public) IP address.  
2. Choose the VPC and create firewall rules to allow only connections from Cloud Run into your instance.  
3. Connect to the instance using a connection pool to best manage connections to the instance.
- B. 1. Create your instance with a specified external (public) IP address.  
2. Choose the VPC and create firewall rules to allow only connections from Cloud Run into your instance.  
3. Use Cloud SQL Auth proxy to connect to the instance.
- C. 1. Create your instance with a specified internal (private) IP address.  
2. Choose the VPC with private service connection configured.  
3. Configure the Serverless VPC Access connector in the same VPC network as your Cloud SQL instance.  
4. Connect to the instance using a connection pool to best manage connections to the instance.
- D. 1. Create your instance with a specified internal (private) IP address.  
2. Choose the VPC with private service connection configured.  
3. Configure the Serverless VPC Access connector in the same VPC network as your Cloud SQL instance.  
4. Use Cloud SQL Auth proxy to connect to the instance.

**Answer: C**

Explanation:
