New CV0-004 Study Materials, Reliable CV0-004 Test Syllabus

The BraindumpStudy CompTIA CV0-004 online practice exam is browser-based and accessible via any browser including Firefox, MS Edge, Safari, Opera, Chrome, and Internet Explorer. This format is also embedded with multiple CompTIA CV0-004 Practice Exam and all specs of the desktop software. You can easily adjust time and questions in all CompTIA Cloud+ (2025) online Practice Exam.

CompTIA Cloud+ (2025) Sample Questions (Q240-Q245):

NEW QUESTION # 240

The project manager must create a project charter. Which of the following should be included in the charter?

- A. Resource allocation
- **B. Stakeholder identification**
- C. Project schedule
- D. Risk plan

Answer: B

Explanation:

The project charter is a high-level authorization document that outlines the purpose, objectives, and identifies key stakeholders. It does not contain detailed schedules, risk management plans, or resource allocation - those come later in the planning process.

Reference: CompTIA Project+ PK0-005 - Project Initiation & Charter Development; CompTIA Cloud+ CV0-004 Governance & Compliance domain.

NEW QUESTION # 241

A cloud developer needs to update a REST API endpoint to resolve a defect. When too many users attempt to call the API

simultaneously, the following message is displayed:

Error: Request Timeout - Please Try Again Later

Which of the following concepts should the developer consider to resolve this error?

- A. Server patch
- **B. Rate limiting**
- C. TLS encryption
- D. Permission issues

Answer: B

Explanation:

To resolve the issue of a REST API endpoint timing out when too many users attempt to call the API simultaneously, the developer should consider implementing rate limiting. Rate limiting controls the number of requests a user can submit in a given amount of time, preventing overuse of the API resources and ensuring availability for all users. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Service Maintenance and Management

NEW QUESTION # 242

The performance of an e-commerce website decreases dramatically during random periods. The IT team is evaluating available resources to mitigate the situation. Which of the following is the best approach to effectively manage this scenario'?

- **A. Configuring automatic elasticity**
- B. Migrating to a dedicated host
- C. Scheduling resource allocation
- D. Purchasing additional servers

Answer: A

Explanation:

Configuring automatic elasticity is the best approach to manage an e-commerce website that experiences random performance drops due to variable traffic. Automatic elasticity enables the cloud resources to scale up or down automatically based on the current load, ensuring consistent performance even during unexpected traffic surges.

NEW QUESTION # 243

A log-parsing application requires significant processing power to ingest the logs streaming from web servers.

The engineering team presents the cloud architect with four proposals

using the same underlying hardware. Which of the following should the cloud architect select in order to minimize the impact of an instance failure while keeping the cost as low as possible?

- A. Two instances of 8vCPU, 16GB RAM, 80GB SSD
- B. Two instances of 8vCPU, 16GB RAM, 80GB HDD
- C. Four instances of 4vCPU, 8GB RAM, 80GB HDD
- **D. Four instances of 4vCPU, 8GB RAM, 80GB SSD**

Answer: D

Explanation:

Choosing four instances with the given specifications would distribute the load and reduce the impact of any single instance failure. Using SSDs over HDDs would provide faster data processing capabilities which is crucial for a log-parsing application. This setup also retains cost efficiency by not over-provisioning resources. References: CompTIA Cloud+ Certification Study Guide (Exam CV0-004) by Scott Wilson and Eric Vanderburg.

NEW QUESTION # 244

A cloud administrator is working in a secure government environment. The administrator needs to implement corrective action due to recently identified security issue on the OS of a VM that is running a facility-management application in a cloud environment. The administrator needs to consult the application vendor, so it might take some time to resolve the issue. Which of the following is the FIRST action the administrator should take while working on the resolution?

- A. Upgrade the OS
- B. Shut down the server.
- **C. Raise a problem ticket.**
- D. Update the risk register.

Answer: C

Explanation:

The first action the administrator should take while working on the resolution is to raise a problem ticket. This will ensure that the issue is properly documented, tracked, and communicated with the appropriate stakeholders. It also helps in prioritizing and managing the issue until it is resolved. In the meantime, the administrator can consult the application vendor for guidance on resolving the security issue.

NEW QUESTION # 245

.....

Every working person knows that CV0-004 is a dominant figure in the field and also helpful for their career. If CV0-004 reliable exam bootcamp helps you pass exams and get a qualification certificate you will obtain a better career even a better life. Our study CV0-004 Guide materials cover most of latest real CV0-004 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career, so why not try our product?
