As a result, there are no place and time limits on your ability to go through Google Google-Workspace-Administrator real exam questions pdf.

## Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q45-Q50):

### NEW QUESTION # 45

Your organization has a strict requirement that your temporary employees can only send emails to and receive emails from specific external domains. You must define a policy in Google Workspace that meets this requirement for users in the temporary employee organizational unit (OU). What should you do?

- **A. Add the allowed domains when configuring the restrict delivery setting in Gmail settings, and select the box to bypass for internal emails**
- B. Configure the restrict delivery setting to limit domains that the temporary employees can communicate with Allow Google Docs sharing
- C. Create a policy in Gmail settings that rewrites the recipient for outbound messages and quarantines incoming messages to review before delivery

- D. Restrict sending and receiving to Google Groups, and carefully curate the temporary employees' memberships

**Answer: A**

Explanation:

- \* Access the Admin Console: Sign in to your Google Admin console.
- \* Navigate to Apps: Click on "Apps" and then "Google Workspace."
- \* Select Gmail: In the Google Workspace section, click on "Gmail."
- \* Gmail Settings: Click on "Compliance" under the "Advanced settings" section.
- \* Restrict Delivery Setting: Scroll down to the "Restrict delivery" section and click "Configure."
- \* Define Policy: Enter the specific external domains you want to allow the temporary employees to communicate with.
- \* Bypass for Internal Emails: Make sure to select the option to bypass the restriction for internal emails, ensuring internal communication is not affected.
- \* Apply to OU: Apply this setting to the organizational unit (OU) containing the temporary employees.
- \* Save the Configuration: Save the changes and ensure the policy is active.

#### NEW QUESTION # 46

Your company maintains a strict privacy policy regarding the external sharing of certain information. You need to scan and block any outgoing email that contains certain sensitive data, such as credit card and national ID numbers. What should you do?

- A. Create a Drive Data Loss Prevention (DLP) rule that blocks content with sensitive data.
- **B. Create a content compliance rule that blocks any outbound email that contains sensitive data.**
- C. Create a content compliance rule that warns the user when they're sending any outbound email that contains sensitive data but still allows sending with proper justification.
- D. Create a new Activity rule that sends a High severity alert for any outbound email that contains sensitive data.

**Answer: B**

#### NEW QUESTION # 47

You need to track all Google Workspace launch announcements and rollout dates and access related assets and resources to manage change in your organization. Where will you find this information?

- **A. Google Workspace Release Calendar**
- B. G Suite support articles
- C. Google Workspace Feature Ideas
- D. Google Workspace Updates Blog

**Answer: A**

Explanation:

A is correct because the G Suite Release Calendar is where you can view the launch announcements and rollout dates.

B is not correct because it does not contain all announcements and rollout dates.

C is not correct because these aren't released features, just a forum for feature suggestions.

D is not correct because it does not contain all announcements and rollout dates.

#### NEW QUESTION # 48

Your business partner requests that a new custom cloud application be set up to log in without having separate credentials. What is your business partner required to provide in order to proceed?

- A. Identity Provider URL
- **B. Service provider ACS URL**
- C. Service provider logout URL
- D. Service provider certificate

**Answer: B**

Explanation:

In order to set up a new custom cloud application to log in without having separate credentials, you need to configure Single Sign-On (SSO) using SAML (Security Assertion Markup Language). The Assertion Consumer Service (ACS) URL is a critical piece of information required for this configuration. It is the endpoint on the service provider's system that receives the authentication assertions from the identity provider (Google Workspace in this case).

Service Provider ACS URL: The ACS URL is necessary for the SSO configuration because it is the URL to which the identity provider will send the SAML assertion after authentication. This URL tells the identity provider where to send the SAML response after the user has been authenticated.

Configuration Steps:

In Google Admin console, navigate to Apps > Web and mobile apps.

Add a custom SAML app.

Enter the ACS URL provided by the service provider in the appropriate field.

Complete the configuration by providing other necessary information such as the Entity ID and Name ID format.

Importance: Without the ACS URL, the identity provider will not know where to send the authentication tokens, making SSO impossible.

#### NEW QUESTION # 49

Your company operates several primary care clinics where employees routinely work with protected health information (PHI). You are in the process of transitioning the organization to Google Workspace from a legacy communication and collaboration system. After you sign the Business Associate Agreement (BAA), you need to ensure that data is handled in compliance with regulations when using Google Workspace. What should you do?

- A. Create a label for Google Drive content to help employees identify sensitive data.
- B. Disable integrations with third-party apps and turn off non-core Google services.
- C. Implement a third-party backup service that is also compliant with Google Workspace core services.
- D. Instruct the staff to not store any PHI in Google Workspace core services, including Google Drive, Docs, Sheets, and Keep.

**Answer: A**

Explanation:

To ensure compliance with regulations when handling protected health information (PHI) in Google Workspace, creating labels for sensitive data, such as PHI, helps employees identify and manage this information properly. Labels can be used to mark files that contain sensitive data, providing an additional layer of organization and protection. This approach aligns with regulatory requirements by ensuring that employees can easily distinguish PHI from other data and apply the necessary policies and security measures.

#### NEW QUESTION # 50

.....

With the help of Google-Workspace-Administrator study materials, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam.
