In the era of information explosion, people are more longing for knowledge, which bring up people with ability by changing their thirst for knowledge into initiative and "want me to learn" into "I want to learn". As a result thousands of people put a premium on obtaining Information-Technology-Management certifications to prove their ability. With the difficulties and inconveniences existing for many groups of people like white-collar worker, getting a Information-Technology-Management Certification may be draining. Therefore, choosing a proper Information-Technology-Management exam guide can pave the path for you which is also conducive to gain the certification efficiently. So why should people choose us? There are several advantages about our Information-Technology-Management latest practice dumps for your reference.

The WGU Information Technology Management QGC1 Information-Technology-Management exam questions are the real Information-Technology-Management Exam Questions that will surely repeat in the upcoming Information-Technology-Management exam and you can easily pass the challenging WGU Information Technology Management QGC1 Information-Technology-Management certification exam. The Information-Technology-Management dumps are designed and verified by experienced and qualified WGU Information Technology Management QGC1 Information-Technology-Management certification exam trainers. They strive hard and utilize all their expertise to make sure the top standard of Information-Technology-Management Exam Practice test questions all the time. So you rest assured that with Information-Technology-Management exam real questions you can not only ace

your entire WGU Information Technology Management QGC1 Information-Technology-Management exam preparation process but also feel confident to pass the WGU Information Technology Management QGC1 Information-Technology-Management exam easily.

WGU Information Technology Management QGC1 Sample Questions (Q172-Q177):

NEW QUESTION # 172

Which process involves the use of monitoring tools to detect and respond to unauthorized access attempts in real time?

- A. Intrusion detection
- B. Log review
- C. Penetration testing
- D. Access control

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Intrusion detection is the process of using monitoring tools and systems to identify and alert on unauthorized or suspicious activities on networks or hosts, often in real time. Intrusion Detection Systems (IDS) analyze traffic or system events to detect:

Unauthorized access attempts

Malicious or abnormal behavior

Known attack signatures or anomalies

When potential intrusions are detected, these systems can generate alerts, and in some configurations (IDS/IPS), they may also help automate responses or integrate with other security tools.

Why the other options are incorrect:

A . Penetration testing - Simulates attacks to find vulnerabilities but is periodic and manual, not continuous real-time monitoring.

B . Access control - Governs who is allowed to access what (through authentication and authorization). It is preventive, not primarily focused on real-time detection of unauthorized attempts once they occur.

C . Log review - Involves analyzing stored logs, often after the fact, for auditing or investigation. It is not necessarily real-time detection.

Therefore, the correct answer is D. Intrusion detection, because it is the process that specifically uses monitoring tools to detect and respond to unauthorized access attempts in real time.

NEW QUESTION # 173

How might global population growth impact IT leaders?

- A. By supporting the rapid expansion of digital infrastructures
- B. By delaying upgrades until population trends stabilize
- C. By focusing on routine system upkeep instead of expanding
- D. By restricting access to conserve existing resources

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Global population growth increases the number of people who need access to technology, communication, data, and digital services. For IT leaders, this trend translates into a need to expand digital infrastructures quickly and strategically to support more users, more devices, and more data.

Key implications of population growth for IT leadership include:

Planning for greater capacity in networks, storage, and computing power.

Scaling systems to support increased internet usage, online services, and applications.

Extending digital access to new regions, communities, and markets.

Ensuring infrastructure can handle greater demand, traffic, and load while maintaining performance and reliability.

Why the other options are not aligned with typical IT leadership responses:

B . By restricting access to conserve existing resources - Limiting access conflicts with organizational and societal goals to expand connectivity and inclusion.

C . By delaying upgrades until population trends stabilize - Waiting would create capacity shortfalls and service issues; IT leaders typically plan ahead of demand.

D . By focusing on routine system upkeep instead of expanding - Routine maintenance remains important, but population growth pushes leaders to prioritize expansion and scalability, not just upkeep.

Therefore, global population growth most directly impacts IT leaders by supporting and driving the rapid expansion of digital infrastructures, making A the correct answer.

NEW QUESTION # 174

Which statement describes the development phase of the systems development life cycle (SDLC)?

- A. Performing corrections, additions, and upgrades to ensure the system continually meets business goals
- B. Placing the software or information system into production to allow users to perform business operations
- C. Bringing project pieces together, checking interoperability, and verifying functionality
- **D. Physically constructing software and information systems using programming languages**

Answer: D

Explanation:

* Understanding the Development Phase in SDLC:

* The development phase involves translating system design specifications into actual software.

* This includes coding the system using programming languages and integrating modules as per the design.

* Why Other Options Are Incorrect:

* Option B: Describes the maintenance phase, which focuses on updates and corrections post- deployment.

* Option C: Relates to the testing phase, where interoperability and functionality are verified.

* Option D: Refers to the implementation phase, where the system is deployed for user operations.

NEW QUESTION # 175

Which statement describes the planning phase of the systems development life cycle (SDLC)?

- A. Bringing project pieces together, checking interoperability, and verifying functionality
- B. Establishing full descriptions of the desired features and operations of the system
- **C. Establishing a high-level strategy and goals for an intended project**
- D. Performing corrections, additions, and upgrades to ensure the system continually meet business goals

Answer: C

NEW QUESTION # 176

What is a benefit of globalization?

- A. Adherence to regulatory requirements
- B. Increased competition
- C. Costs associated with operating in new geographic areas
- **D. Access to new talent pools**

Answer: D

Explanation:

Definition of Globalization Benefits:

Globalization allows organizations to expand their operations globally, gaining access to diverse markets and resources, including new talent pools from different regions.

Key Benefit:

Accessing new talent pools enables businesses to tap into a diverse workforce with varied skills, fostering innovation and improving operational efficiency.

Incorrect Options Analysis:

A . Costs associated with new geographic areas: This is a challenge, not a benefit.

B . Adherence to regulatory requirements: This is an obligation, not a benefit.

C . Increased competition: This is a consequence of globalization, but not a direct benefit.
