Salesforce Order Management Administrator Accredited Professional Sample Questions (Q13-Q18):

NEW QUESTION # 13

What is the required amount of test code coverage when deploying an Apex class?

- A. 0.65
- **B. 0.75**
- C. 0.55
- D. 0.85

Answer: B

Explanation:

The required amount of test code coverage when deploying an Apex class is 75%. This means that at least 75% of the Apex code must be covered by unit tests, and all of those tests must complete successfully. Verified Reference:

NEW QUESTION # 14

A company sells its products in kits. The company wants the kits to remain grouped together during returns in Order Management so that all parts of the kit are accounted for.

What should the administrator recommend?

- A. Add a custom attribute to the order header only
- **B. Track the individual kit items using custom attributes**
- C. Pass the data as is. Order Management will handle the kit.
- D. Add a suffix to the Stock Keeping Unit of the Product which represents Kit status

Answer: B

Explanation:

Explanation

The best way for the administrator to recommend tracking the kits so that they remain grouped together during returns in Order Management is to use custom attributes. Custom attributes are fields that can be added to objects to store additional information that is not available in standard fields. The administrator can create custom attributes for the Order Item Summary object to indicate whether an item is part of a kit, and what are the other items in the kit. This way, the kits can be easily identified and handled during

returns. Verified References:<https://documentation.b2c.commercecloud.salesforce.com/DOC2/topic/com.demandware.dochehelp/Or>

NEW QUESTION # 15

Universal Containers (UC) is evaluating Salesforce Order Management for managing its overarching process because their current system is written mostly in Apex code and has proved difficult to modify, deploy and debug. What are three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data?

- A. It will notify the admin before a third party integration's data interface has changed
- **B. The admin can attach a debugger to live customer sessions**
- **C. The admin can easily debug specific business cases visually.**
- **D. Because it is visual it is also self-documenting as changes are made**
- E. It allows for non-coding members of staff to contribute suggestions for optimizations and better overall customer experience

Answer: B,C,D

Explanation:

Three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data are:

The admin can attach a debugger to live customer sessions. This allows the admin to monitor and troubleshoot the flow execution in real time, without affecting the customer experience or data integrity.

The admin can easily debug specific business cases visually. This allows the admin to test the flow with different input values and see how the flow behaves in a graphical interface, without writing any code.

Because it is visual it is also self-documenting as changes are made. This allows the admin to easily understand and maintain the flow logic, as well as track the changes and versions of the flow.

NEW QUESTION # 16

Once the administrator has activated the integration between B2C Commerce and Order Management, orders being placed by customers will be sent to Order Management if the order status is set to which two values?

- **A. New**
- **B. Active**
- C. Drafted
- D. Open
- E. Created

Answer: A,B

Explanation:

Once the administrator has activated the integration between B2C Commerce and Order Management, orders being placed by customers will be sent to Order Management if the order status is set to Active or New. These are the two order statuses that indicate that an order has been created or confirmed by a customer, and that it needs to be processed by Order Management.

NEW QUESTION # 17

How can an administrator localize screens in the Order Management flows?

- A. Add the Language Selector component at the start of the flow so users can change the language
- B. Enable localization for the flow and modify the label's value to match the desired language
- C. Create a copy of the flow with hard-coded text in the desired language
- **D. Create text localization variables in the flow**

Answer: D
