Citrix 1Y0-231 Dumps PDF And Practice Test Software

GuideTorrent is working on providing most helpful the real test questions answer in certification exams many years especially for 1Y0-231. It provide 100% real test exam materials to help you clear exam surely. If you find some mistakes in other sites, you will know how the important the site have certain power. Choosing good Citrix 1Y0-231 Exam Materials, we will be your only option.

Citrix Deploy and Manage Citrix ADC 13 with Citrix Gateway Sample Questions (Q59-Q64):

NEW QUESTION # 59

A Citrix Administrator needs to configure single sign-on to a StoreFront server using an external, secure single URL. Which type of virtual server can the administrator use to meet this requirement?

- A. VPN
- **B. Unified Gateway**
- C. Content Switching
- D. Load Balancing

Answer: B

NEW QUESTION # 60

Scenario: A Citrix Administrator configured Citrix ADC load balancing to send requests to one of three identical backend servers. Each server handles multiple protocols, and load balancing is set up in round-robin mode. The current load-balancing setup on the Citrix ADC is:

- * One load-balancing virtual server with one externally accessible VIP
- * One service created for each protocol type
- * One server entity for each backend resource

During business hours, the administrator wants to make changes to one backend server without affecting the other servers. What is the most efficient way for the administrator to ensure that all traffic is routed away from the server without impeding responses from other resources?

- **A. Unbind the correct server entity from the load-balancing virtual server.**
- B. Disable the backend service entity targeted for change.
- C. Disable the backend server entity targeted for change.
- D. Disable the load-balancing virtual server.

Answer: A

NEW QUESTION # 61

Scenario: After deploying a Citrix ADC in production, a Citrix Administrator notices that client requests are NOT being evenly distributed among backend resources. The administrator wants to change from the default load-balancing method to one that will help distribute the load more evenly.

Which load-balancing method would ensure that the server with the least amount of network utilization is receiving new connections?

- A. Least packets
- **B. Least bandwidth**
- C. Least connection
- D. Least response time

Answer: B

NEW QUESTION # 62

Scenario: A Citrix Administrator deployed a Citrix ADC in one-arm mode. Currently, the VLANs 20, 30, and 40

are tagged on the interface with the option of 'tagall'.

What is true regarding the VLANs, when 'tagall' is enabled on the interface?

- **A. VLANs 1, 20, 30, and 40 are tagged on the interface.**
- B. VLANs 20, 30, 40, and HA packets are tagged on the interface.
- C. VLANs 1, 20, 30, 40, and HA packets are tagged on the interface.
- D. VLANs 20, 30, and 40 are tagged on the interface.

Answer: A

NEW QUESTION # 63

A Citrix Administrator needs to integrate an existing certification-based authentication policy into an existing Citrix Gateway virtual server.

Which three steps can the administrator take to accomplish this? (Choose three.)

- **A. Enable client authentication on the SSL parameters of the virtual server.**
- **B. Create a CERT authentication policy and bind it to the Citrix Gateway virtual server.**
- **C. Change the client certificate to mandatory on the SSL parameters of the virtual server.**
- D. Bind the existing CERT authentication policy to the Citrix Gateway virtual server.
- E. Enable the two-factor option on the existing CERT authentication profile.

Answer: A,B,C
