

100% Pass Quiz 2026 CompTIA - DA0-002 - Latest CompTIA Data+ Exam (2025) Exam Pattern

DOWNLOAD the newest VCEdumps DA0-002 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1DoeEB3BqOISKPfQ563RJRbB3otrZwWyyw>

As we all know that if you can obtain the DA0-002 certification, your life will change from now on. There will be various opportunities waiting for you. You take the initiative. It is up to you to make a decision. We only live once. Don't postpone your purpose and dreams. Our DA0-002 Real Exam will escort your dreams. You will get better jobs as well as higher salaries to lead a better life. Come to fight for your bright future and buy our DA0-002 practice braindumps right now!

DA0-002 test guide is not only the passbooks for students passing all kinds of professional examinations, but also the professional tools for students to review examinations. In the past few years, DA0-002 question torrent has received the trust of a large number of students and also helped a large number of students passed the exam smoothly. That is to say, there is absolutely no mistake in choosing our DA0-002 Test Guide to prepare your exam, you will pass your exam in first try and achieve your dream soon.

Latest DA0-002 Exam Pattern - Realistic CompTIA Latest CompTIA Data+ Exam (2025) Exam Pattern

Whereas the CompTIA Data+ Exam (2025) (DA0-002) PDF dumps file offered by the VCEdumps is simply a collection of real CompTIA Data+ Exam (2025) (DA0-002) exam questions that prepare you quickly for the final DA0-002 certification exam. Choose the right VCEdumps DA0-002 Exam Questions formats and start this journey as soon as possible and become a certified CompTIA DA0-002 exam expert. Best of luck in exams and career!!

CompTIA Data+ Exam (2025) Sample Questions (Q106-Q111):

NEW QUESTION # 106

Which of the following file types separates data using a delimiter?

- A. HTML
- B. CSV
- C. XML
- D. JSON

Answer: B

Explanation:

This question falls under the Data Concepts and Environments domain, focusing on understanding file formats and their structures. The task is to identify a file type that uses delimiters to separate data.

* XML (Option A): XML uses tags to structure data, not delimiters.

* HTML (Option B): HTML is a markup language for web pages, not a data file format using delimiters.

* JSON (Option C): JSON uses key-value pairs and nested structures, not delimiters like commas.

* CSV (Option D): CSV (Comma-Separated Values) uses delimiters (typically commas) to separate data fields, making it the correct choice.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," such as file formats like CSV that use delimiters.

NEW QUESTION # 107

A data analyst encounters an issue with new software and a code that they are using. The analyst includes print statements in the code to try to identify the issue, without success. An informal peer review of the code also produces the same result. The analyst confirms that the software is updated to the latest version and compatible with the code. Which of the following troubleshooting steps should the analyst take next?

- A. Research the issue online and see if a solution is available.
- B. Use the old software and preexisting code, since both were functional.
- C. Contact the IT department and inform them that the software has a bug.
- D. Escalate to the department manager and ask for assistance.

Answer: A

Explanation:

This question pertains to the Data Governance domain, focusing on troubleshooting and maintaining data quality in software processes. The analyst has already tried basic debugging and confirmed compatibility, so the next step involves seeking external resources.

* Use the old software and preexisting code, since both were functional (Option A): Reverting to old software avoids solving the issue and may introduce other risks (e.g., security vulnerabilities).

* Contact the IT department and inform them that the software has a bug (Option B): Assuming a bug without further investigation is premature, especially since compatibility was confirmed.

* Escalate to the department manager and ask for assistance (Option C): Escalation is a later step after exhausting technical troubleshooting options.

* Research the issue online and see if a solution is available (Option D): Researching online (e.g., forums, documentation) is a logical next step to find solutions or identify known issues, especially after local debugging fails.

The DA0-002 Data Governance domain includes "data quality control concepts," and researching online is a standard troubleshooting step to maintain data process integrity.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

NEW QUESTION # 108

Which of the following data repositories stores unstructured and structured data?

- A. Data silo
- B. Data mart
- C. Data lake
- D. Data store

Answer: C

Explanation:

This question falls under the Data Concepts and Environments domain of CompTIA Data+ DA0-002, which involves understanding different types of data repositories and their characteristics. The task is to identify a repository that can store both unstructured and structured data.

* Data store (Option A): A data store is a general term for any data repository, but it's not specific enough to confirm it stores both unstructured and structured data.

* Data silo (Option B): A data silo is an isolated data repository, often structured, and not typically designed for unstructured data.

* Data mart (Option C): A data mart is a subset of a data warehouse, focused on structured data for specific business areas, not unstructured data.

* Data lake (Option D): A data lake is a centralized repository that stores raw data in its native format, including both structured (e.g., tables) and unstructured (e.g., text, images) data, making it the correct choice.

The DA0-002 Data Concepts and Environments domain includes understanding "different types of databases and data repositories," and a data lake is specifically designed to handle both unstructured and structured data.

NEW QUESTION # 109

A data analyst wants to use the following tables to find all the customers who have not placed an order:

Customers table

ID

Name

Address

Products table

ID

Name

Customer_ID

Which of the following SQL statements is the best way to accomplish this task?

- A. **SELECT * FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.Customer_ID WHERE P.Customer_ID IS NULL**
- B. SELECT * FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.ID WHERE COUNT(P.) = 0
- C. SELECT * FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.Customer_ID = C.ID WHERE P.Customer_ID IS NOT NULL
- D. SELECT * FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.Customer_ID = C.ID WHERE (SELECT COUNT(P.) = 0)

Answer: A

Explanation:

This question pertains to the Data Analysis domain, focusing on SQL queries to analyze data relationships.

The task is to find customers who have not placed an order, meaning customers in the Customers table without a matching Customer_ID in the Products table.

* Option A: SELECT * FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.

Customer_ID WHERE P.Customer_ID IS NULL A LEFT JOIN includes all customers, even those without orders (where Products columns are NULL). Filtering with WHERE P.Customer_ID IS NULL selects only customers without a match in Products, correctly identifying those who haven't ordered.

* Option B: SELECT * FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.

ID WHERE COUNT(P.*) = 0 An INNER JOIN only includes matching records, so it won't return customers without orders. The join condition C.ID = C.ID is also incorrect, and COUNT requires a GROUP BY, making this invalid.

* Option C: SELECT * FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.

Customer_ID = C.ID WHERE (SELECT COUNT(P.*) = 0) An INNER JOIN excludes customers without orders, and the subquery syntax is incorrect (COUNT needs a GROUP BY or to be part of a HAVING clause).

* Option D: SELECT * FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.

Customer_ID = C.ID WHERE P.Customer_ID IS NOT NULL This starts with Products and joins Customers, returning only records with orders (opposite of the task), and IS NOT NULL further excludes non-ordering customers.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods using SQL queries," and a LEFT JOIN with a NULL check is the standard method for finding non-matching records.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

NEW QUESTION # 110

A report triggers an error that prevents information from being displayed. However, the report was functional before a database upgrade. Which of the following should a data analyst do first to troubleshoot the problem?

- A. **Verify the connection to the database.**
- B. Change the report's refresh rate.
- C. Check whether the data structures were modified.
- D. Ensure the system has permissions for the report service.

Answer: A

Explanation:

This question falls under the Data Concepts and Environments domain, which in DA0-002 involves understanding database environments, connections, and troubleshooting issues related to data access. The scenario describes a report failing after a database upgrade, indicating a potential issue with the database environment or connectivity.

- * Ensure the system has permissions for the report service (Option A): While permissions issues can cause report failures, they are less likely to be the first issue after a database upgrade unless explicitly mentioned.
- * Change the report's refresh rate (Option B): Refresh rate adjustments might address performance issues but won't resolve a fundamental error preventing data display.
- * Verify the connection to the database (Option C): A database upgrade often involves changes to connection strings, drivers, or network configurations. Verifying the connection ensures the report can access the database, making this the most logical first step.
- * Check whether the data structures were modified (Option D): While possible, checking data structures (e.g., schema changes) is a deeper troubleshooting step that should follow after confirming basic connectivity.

The DA0-002 Data Concepts and Environments domain includes understanding database connectivity, similar to DA0-001's focus on "data schemas and dimensions" and environments (web ID: 1). Verifying the connection is the first recommended step in troubleshooting post-upgrade issues.
