Latest Data-Architect Exam Experience | Test Data-Architect Price

We are not satisfied with that we have helped more candidates pass Data-Architect exam, because we know that the IT industry competition is intense, we must constantly improve our dumps so that we cannot be eliminated. So our technical teams continue to renew the Data-Architect Study Materials in time, in order to let the examinee using our products to keep up with the Data-Architect exam reform tightly.

Salesforce Data-Architect Certification Exam consists of multiple-choice questions and scenarios that test candidates on their ability to apply their knowledge to real-world situations. Data-Architect exam covers a wide range of topics, including data modeling, data integration, data governance, data security, and data quality. Candidates must have a strong understanding of all these areas to succeed in the exam.

Salesforce Certified Data Architect Sample Questions (Q259-Q264):

NEW QUESTION # 259

Universal Containers (UC) owns several Salesforce orgs across a variety of business units. UC management has declared that it needs the ability to report on Accounts and Opportunities from each org in one place. Once the data is brought together into a global view, management would like to use advanced AI-driven analytics on the dataset.

Which tool should a data architect recommend to accomplish this reporting requirement?

- A. Run standard reports and dashboards.
- B. Install a third-party AppExchange tool for multi-org reporting.
- C. Write a Python script to aggregate and visualize the data.
- **D. Use Einstein Analytics for multi-org.**

Answer: D

NEW QUESTION # 260

Universal Containers (UC) has a complex system landscape and is implementing a data governance program for the first time. Which two first steps would be appropriate for UC to initiate an assessment of data architecture? Choose 2 answers.

- **A. Engage with executive sponsorship to assess enterprise data strategy and goals.**
- **B. Engage with business units and IT to assess current operational systems and data models.**
- C. Engage with IT program managers to assess current velocity of projects in the pipeline.
- D. Engage with database administrators to assess current database performance metrics.

Answer: A,B

Explanation:

Engaging with executive sponsorship to assess enterprise data strategy and goals, and engaging with business units and IT to assess current operational systems and data models are two first steps that would be appropriate for UC to initiate an assessment of data architecture. These steps will help to understand the current state of data management, the business needs and expectations, and the gaps and opportunities for improvement. Engaging with IT program managers to assess current velocity of projects in the pipeline, and engaging with database administrators to assess current database performance metrics are not relevant steps for assessing data architecture, as they are more related to project management and technical performance.

NEW QUESTION # 261

UC has the following systems:

Billing system

Customer support system

CRM system

US has been having trouble with business intelligence across the different systems. Recently US implemented a master data management (MDM) solution that will be the system of truth for the customer records.

Which MDM data element is needed to allow reporting across these systems?

- A. Email address.
- B. Full name.
- **C. Global unique customer number.**
- D. Phone number.

Answer: C

NEW QUESTION # 262

A casino is implementing salesforce and is planning to build a customer 360 view for a customer who visits its resorts. The casino currently maintained the following systems that records customer activity:

1. Point of sales system: All purchases for a customer.
2. Salesforce: All customer service activity and sales activity for a customer.
3. Mobile app: All bookings, preferences and browser activity for a customer.
4. Marketing: All email, SMS and social campaigns for a customer.

Customer service agents using salesforce would like to view the activities from all system to provide supports to customers. The information has to be current and real time.

What strategy should the data architect implement to satisfy this requirement?

- A. Use a customer data mart to view the 360 view of customer.
- B. Periodically upload summary information in salesforce to build 360 view.
- **C. Explore external data sources in salesforce to build 360 view of customer.**
- D. Migrate customer activities from all 4 systems into salesforce.

Answer: C

Explanation:

Exploring external data sources in Salesforce to build 360 view of customer is the best strategy to satisfy the requirement, as it allows real-time access to data from other systems without storing it in Salesforce. Using a customer data mart may not provide real-time information or may require additional integration efforts. Migrating customer activities from all 4 systems into Salesforce may exceed the storage limits or cause data quality issues. Periodically uploading summary information in Salesforce may not provide current or detailed information.

NEW QUESTION # 263

UC has millions of case records with case history and SLA data.

a. UC's compliance team would like historical cases to be accessible for 10 years for Audit purpose.

What solution should a data architect recommend?

- A. Purchase more data storage to support case object
- **B. Use a custom Big object to store archived case data.**
- C. Use a custom object to store archived case data.
- D. Archive Case data using Salesforce Archiving process

Answer: B
