## UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q236-Q241):

### NEW QUESTION # 236

Which of the following file types are supported for the DocumentPath property in the Classify Document Scope activity?

- A. .bmp, .pdf, .jpe, .psd
- B. .pdf, .jpeg, .raw, tif
- C. .jpe, .eps, .jpg, .tiff
- D. .png, .gif, .jpe, .tiff

**Answer: D**

Explanation:

According to the UiPath documentation portal, the DocumentPath property in the Classify Document Scope activity accepts the path to the document you want to validate. This field supports only strings and String variables. The supported file types for this property field are .png, .gif, .jpe, .jpg, .jpeg, .tiff, .tif, .bmp, and .pdf.

Therefore, option B is the correct answer, as it contains four of the supported file types. Option A is incorrect, as .psd is not a supported file type. Option C is incorrect, as .raw is not a supported file type. Option D is incorrect, as .eps is not a supported file type.

#### NEW QUESTION # 238

Which filter option should be used for the For Each File in Folder activity to iterate through all the Microsoft Word documents in a local folder?

- **A. ".doc"**
- B. "\* doc, \*docx"
- C. "\* doc"
- D. Microsoft Word

**Answer: A**

Explanation:

To iterate through all Microsoft Word documents in a local folder using the For Each File in Folder activity, you should use the filter option "\*.doc\*". This filter utilizes the asterisk (\*) wildcard to match any number of characters, effectively capturing both .doc and .docx file extensions.

UiPath Documentation

In the Filter by field of the activity, entering "\*.doc\*" ensures that the iteration includes all files with names ending in .doc or .docx, which are standard extensions for Microsoft Word documents.

Other options are incorrect because:

B: Microsoft Word: This is not a valid filter pattern.

\*C. " doc"\*: This pattern looks for files with names ending in " doc" and does not account for file extensions.

\*D. " doc, \*docx"\*: This is not a valid filter pattern; multiple patterns should be separated by semicolons (e.g., "\*.doc;\*.docx").

Therefore, the correct filter to use is "\*.doc\*".
