

Analytics-Admn-201 Certification Test Answers | Analytics-Admn-201 Sample Exam

P.S. Free 2026 Salesforce Analytics-Admn-201 dumps are available on Google Drive shared by PDFVCE:
<https://drive.google.com/open?id=1-WZmdXVzWhYjKlh73ptpnwIBwUIEM2hn>

Generally speaking, a satisfactory Analytics-Admn-201 study material should include the following traits. High quality and accuracy rate with reliable services from beginning to end. As the most professional group to compile the content according to the newest

information, our Analytics-Admn-201 Practice Questions contain them all, and in order to generate a concrete transaction between us we take pleasure in making you a detailed introduction of our Analytics-Admn-201 exam materials.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server’s interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	<ul style="list-style-type: none"> Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 4	<ul style="list-style-type: none"> Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 5	<ul style="list-style-type: none"> Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau’s security model at different levels from sites to workbooks.

2026 Unparalleled Analytics-Admn-201 Certification Test Answers & Salesforce Certified Tableau Server Administrator Sample Exam

You know, the Analytics-Admn-201 certification is tough and difficult IT certification. In order to get a better life, many people as you still want to chase after it. There is a useful and reliable study material of Salesforce Analytics-Admn-201 actual test for you. The Analytics-Admn-201 Pdf Dumps will teach you the basic technology and tell you how to affectively prepare for the Analytics-Admn-201 real test. In a word, Analytics-Admn-201 updated dumps is the best reference for you preparation.

Salesforce Certified Tableau Server Administrator Sample Questions (Q12-Q17):

NEW QUESTION # 12

What is the minimum required free hard disk space recommended for a Tableau Server installation in production?

- A. 50 GB

- B. 64 GB
- C. 32 GB
- D. 15 GB

Answer: A

Explanation:

Tableau Server has specific hardware requirements for production environments to ensure stability and performance. The minimum recommended free disk space for a production installation is 50 GB. This accounts for:

- * The installation itself (approximately 1-2 GB).
- * Space for log files, temporary files, and extracts managed by the File Store and Data Engine.
- * Room for backups and operational overhead.

The full minimum hardware recommendations for a single-node production deployment are:

- * 8 CPU cores (2.0 GHz or faster).
- * 32 GB RAM.
- * 50 GB free disk space (on the system drive, typically C: on Windows).
- * Option A (32 GB): Incorrect. While 32 GB is the minimum RAM requirement, it's insufficient for disk space in production.
- * Option B (50 GB): Correct. This matches Tableau's official recommendation for production environments.
- * Option C (15 GB): Incorrect. 15 GB is the minimum for a non-production or trial installation, not production.
- * Option D (64 GB): Incorrect. While 64 GB exceeds the minimum, it's not the specified requirement-50 GB is sufficient.

Reference: Tableau Server Documentation - "Minimum Hardware Recommendations" (<https://help.tableau.com/current/server/en-us/requirements.htm>).

NEW QUESTION # 13

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on number of users
- B. Language and locale
- C. Limitation on storage space
- D. Ability to embed credentials

Answer: B,C

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

- * Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.
- * Option B (Limitation on storage space): Correct.
- * Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.
- * How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.
- * Impact: Prevents one site from monopolizing resources in multi-site deployments.
- * Option D (Language and locale): Correct.
- * Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).
- * How: Site settings UI-e.g., "Language: French, Locale: France."
- * Impact: Tailors the user experience per site's audience.
- * Option A (Ability to embed credentials): Incorrect.
- * Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.
- * Option C (Limitation on number of users): Incorrect.
- * Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.

Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 14

Several Tableau Server users published workbooks that have large extracts. After several weeks of use, the users abandoned the workbooks. What should you do to identify the abandoned workbooks?

- A. View all workbooks, and sort by the Modified date
- B. Delete all extracts and allow them to be re-generated automatically if they are still in use
- **C. Use the Stale Content administrative view**
- D. Examine the extract files in ProgramData/Tableau/Tableau Server/data/tabsvc/dataengine/extract

Answer: C

Explanation:

Abandoned workbooks-those no longer actively used-can clutter Tableau Server and consume resources (e.g., disk space for extracts). Identifying them efficiently requires leveraging built-in administrative tools rather than manual or destructive methods. Let's explore this in depth:

* Tableau Server Admin Views: Tableau provides pre-built administrative views to monitor server health, usage, and content. The Stale Content view, accessible under Server > Status > Administrative Views, is specifically designed to identify content (workbooks, data sources) that hasn't been viewed or modified recently. It shows:

* Content name, owner, and project.

* Last viewed date and last modified date.

* View count over a period. This view uses Repository data to track usage metrics, making it ideal for spotting abandoned workbooks.

* Option A (Use the Stale Content administrative view): Correct. This is the most efficient and non-invasive method. You can filter by last viewed date (e.g., >30 days ago) to identify workbooks with large extracts that users have stopped accessing. From there, you can contact owners or delete the content if policy allows. It's a server administrator's go-to tool for content management.

* Option B (Examine extract files in ProgramData/.../extract): Incorrect and impractical. The ProgramData/Tableau/Tableau Server/data/tabsvc/dataengine/extract directory stores .hyper extract files, but:

* File names are cryptic (e.g., GUIDs), not tied directly to workbook names.

* It doesn't indicate usage or abandonment-only file presence and size.

* Manual inspection is time-consuming and error-prone compared to the Stale Content view.

* Option C (Delete all extracts and allow them to be re-generated): Incorrect and risky. Deleting extracts (e.g., via tsm maintenance cleanup) removes them without identifying usage. Regeneration only occurs if a schedule or user triggers it, potentially disrupting active users and losing historical data unnecessarily.

* Option D (View all workbooks, and sort by the Modified date): Partially effective but inefficient. In the Tableau Server UI (e.g., under Content > Workbooks), you can sort by "Last Modified," but:

* It doesn't show viewership (a workbook might be modified recently but unused).

* It's manual and doesn't scale for large deployments compared to the Stale Content view.

Why This Matters: The Stale Content view leverages Tableau's metadata to provide actionable insights, saving time and reducing risk compared to manual or destructive alternatives. It's part of Tableau's governance toolkit.

Reference: Tableau Server Documentation - "Administrative Views" (https://help.tableau.com/current/server/en-us/adminview_stale_content.htm).

NEW QUESTION # 15

If a user already exists as part of a group in Tableau Server, and Active Directory synchronization then applies a minimum site role to the group, what will happen to the existing user's site role?

- A. It will change to the minimum site role only if the minimum site role provides more access
- **B. It will change to the minimum site role only if the minimum site role reduces access**
- C. It will always change to the minimum site role
- D. It will never change as a result of synchronization

Answer: B

Explanation:

When Tableau Server uses Active Directory (AD) for authentication, group synchronization imports AD groups and assigns a minimum site role (e.g., Viewer, Explorer) to users in that group. This ensures users meet a baseline access level. The behavior for existing users during sync is:

* If the user's current site role provides more access than the minimum (e.g., Explorer vs. Viewer), their role remains unchanged.

* If the user's current role provides less access than the minimum (e.g., Unlicensed vs. Viewer), their role is upgraded to the minimum.

This preserves higher privileges while enforcing a floor. "Reduces access" means the minimum role is lower than the current role (e.g., Viewer vs. Explorer), in which case the existing role stays.

* Option A (It will change to the minimum site role only if the minimum site role reduces access):

Correct. The user's role changes only if the minimum increases access (e.g., Unlicensed to Viewer); otherwise, it stays higher.

* Option B (It will change only if the minimum provides more access): Incorrect wording. This is the inverse of the actual behavior-change occurs when needed to meet the minimum, not to exceed it.

* Option C (It will always change): Incorrect. Existing higher roles are preserved.

* Option D (It will never change): Incorrect. It changes if the current role is below the minimum.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 16

What are two features of the Tableau Server user-based license? (Choose two.)

- A. A perpetual license
- B. Restricts the number of machine cores you can deploy
- C. A subscription license
- D. Enables distinct user roles

Answer: C,D

Explanation:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

* Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.

* Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.

* Option A (A perpetual license): Correct. User-based licenses are subscription-based by default.

* Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.

* Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.

* Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 17

.....

Every one, please pay attention to PDFVCE platform. Salesforce Analytics-Admn-201 exam training is completely designed for the Analytics-Admn-201 examination with the high-quality and best accuracy. The questions of the Analytics-Admn-201 almost mirror the actual test and cover all most the main contents. Besides, the cost of the Analytics-Admn-201 Exam PDF is reasonable and affordable. With the help of the Salesforce Analytics-Admn-201 study material, your study will be efficiency. 100% pass is a little case for you.
