71301T Exam Score & Valid Test 71301T Braindumps

Our 71301T test torrent is of high quality, mainly reflected in the pass rate. As for our 71301T study tool, we guarantee our learning materials have a higher passing rate than that of other agency. Our 71301T test torrent is carefully compiled by industry experts based on the examination questions and industry trends in the past few years. More importantly, we will promptly update our 71301T exam materials based on the changes of the times and then send it to you timely. 99% of people who use our learning materials have passed the exam and successfully passed their certificates, which undoubtedly show that the passing rate of our 71301T Test Torrent is 99%. If you fail the exam, we promise to give you a full refund in the shortest possible time. So our product is a good choice for you. Choosing our 71301T study tool can help you learn better. You will gain a lot and lay a solid foundation for success.

Avaya Aura Communication Applications Implement Sample Questions (Q41-Q46):

NEW QUESTION # 41

A field engineer runs the Installation Wizard during the deployment of the Avaya Session Border Controller for Enterprise (ASBCE). Which statement about configuring Domain Name System (DNS) server address during the Installation Wizard is true?

- A. A DNS server address is not required.
- B. A DNS server address should not be configured during the Installation Wizard.
- **C. A Primary DNS server address needs to be configured.**
- D. Both the Primary and the Secondary DNS server addresses must be configured, even if only one DNS server is available.

Answer: C

Explanation:

When deploying an Avaya Session Border Controller for Enterprise (ASBCE), providing a DNS server is a mandatory step in the Installation Wizard.

Necessity: The ASBCE requires DNS resolution to correctly identify and communicate with other components in the Avaya Aura ecosystem (such as the Avaya Aura System Manager (SMGR), WebLM servers, and external SIP trunks).

Minimum Requirement: While the wizard allows for the configuration of a primary, secondary, and tertiary DNS server, only the Primary DNS server is strictly required for the initial network configuration and service activation.

NEW QUESTION # 42

To allow trust between Avaya Aura System Manager (SMGR) and Avaya Aura Messaging (AAM), there is a password set when you add the Trusted Server on AAM.

This password must match with the password also configured in SMGR.

Which statement about the password in SMGR is true?

- **A. It needs to match the Attributes of the Messaging Managed Element in the Inventory.**
- B. It needs to match the Enrollment Password.
- C. It needs to match the admin password used to login to SMGR using a web browser.
- D. It needs to match the root password used to login to SMGR command line.

Answer: A

Explanation:

Configuring Messaging in the normal operational mode

Before you begin

* Add both the primary and secondary servers as Trusted Servers in the Messaging system.

* Update the Login, Password, and Confirm Password fields with the appropriate trusted server defined on the Messaging system.

Procedure

1. Log on to the Messaging system that System Manager manages.
2. Add the secondary System Manager server as Trusted Servers in the Messaging system.
3. Log on to the secondary System Manager server.
4. On the System Manager web console, click Services > Inventory.
5. In the left navigation pane, click Manage Elements.
6. On the Manage Elements page, select the Messaging system that you want to change to the secondary System Manager server.
7. Click Edit.
8. On the Attributes tab, fill the Login, Password, and Confirm Password fields with the corresponding name and password of the Messaging trusted server.
9. Click Commit.
10. Click Inventory > Synchronization > Messaging System, and select the required Messaging element.
11. Click Now.

The secondary System Manager server retrieves all data from Messaging and is now ready to administer and manage Messaging.

NEW QUESTION # 43

You are creating a SIP Entity for Avaya Aura Engagement Development Platform?EDP / Avaya Breeze™. What do you have to enter in the field labeled FQDN or IP Address?

- A. the SM100 IP-address or FQDN of the Avaya Breeze™ platform
- **B. the Management IP-Address or FQDN of the Avaya Breeze™ platform.**

- C. the IP-Address or FQDN of Core Platform Cluster
- D. the IP-Address or FQDN of general Purpose Cluster

Answer: B

Explanation:

Administering an Avaya Breeze instance

Before you begin

To complete this task you will need:

* The IP address of the Avaya Breeze Management Network Interface. This is the same IP address you used when deploying the Virtual Machine (VM).

* The IP address including the network mask, and default gateway for the Avaya Breeze Security Module.

Procedure (see step 6 below)

1. On System Manager, in Elements, click Avaya Breeze.
2. Click Server Administration.
3. In the Avaya Breeze Server Instances list, click New.
4. In the SIP Entity field, select the SIP Entity that you created.
5. Ensure that the value in the UCID Network Node ID field is unique across the solution deployment so that it does not conflict with other UCID-generating entities like Avaya Aura Communication Manager or Avaya Aura Experience Portal.
6. In the Management Network Interface FQDN or IP Address field, type the IP address of the Avaya Breeze Management Network Interface.

NEW QUESTION # 44

What are the three components of Avaya Aura Messaging (AAM)? (Choose three.)

- A. Messaging Distributor
- **B. AxC/Directory**
- **C. Messaging Store**
- **D. Application Server**
- E. SM100 Module

Answer: B,C,D

Explanation:

The AXC connector is always co-resident with the Avaya message store.

□

NEW QUESTION # 45

After running the Install wizard on Avaya Session Border Controller for Enterprise (SBCE), you added a Public Outside IP address to the B1 interface. You try to ping this IP address from a PC in the same subnet but it fails. What would you do first to resolve the issue?

- A. Reboot SBCE.
- **B. Navigate to Device Specific Settings > Network Management > Interfaces and Enable the B1 interface.**
- C. Restart Applications.
- D. Set the Default Gateway router IP address, navigate to the Interfaces and Enable the B1 Interface.

Answer: B

Explanation:

1. The interface might need to be enabled.

□

2. Click on the Interface Configuration tab.

□

3. Click the Toggle link for both the A1 and the B1 interfaces.

The Administrative Status for both A1 and B1 changes to Enabled

NEW QUESTION # 46
