CompTIA Linux+ Certification Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

A systems administrator is deploying a web server using the following code:

```
Name "Web Server"
description "The role contain Nodes, which act as a web server"
run_List "Recipe[ntp]"
default_attributes "ntp" => {
  'ntpdate'=> {
    'disable' => true
  }
}
```

Which of the following technologies is the administrator using to create this web server?

- A. Ansible
- B. Chef
- C. Puppet

- D. Terraform

Answer: B

Explanation:

The code uses Chef's Ruby DSL for defining a role with name, description, run_list, and default_attributes, which are constructs specific to Chef.

NEW QUESTION # 21

SIMULATION 3

You are a systems administrator and have created an uncompressed backup of the application directory. Several hours later, you must restore the application from backup.

INSTRUCTIONS

Within each tab, click on an object to form the appropriate command used to create the backup and restore the application.

Command objects may only be used once, but the spacebar _ object may be used multiple times.

Not all objects will be used. Click the arrow to remove any unwanted objects from your command.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

-cvf creates (-c) a verbose (-v) archive file (-f) named /backups/application.tar.
 -C /opt/ application changes to /opt/ so only the relative application directory is saved, avoiding absolute paths.
 -xvf extracts (-x) the same archive, and -C /opt/ restores the contents back into the original location.

NEW QUESTION # 22

Which of the following is the main reason for setting up password expiry policies?

- A. To mitigate the use of exposed passwords
- B. To avoid using the same passwords repeatedly
- C. To force usage of passwordless authentication
- D. To increase password strength and complexity

Answer: A

Explanation:

Password expiry policies ensure that even if a password has been compromised, its period of validity is limited, reducing the risk of long-term unauthorized access.

NEW QUESTION # 23

Users connecting to a MySQL database on a Linux system report frequent errors. An administrator reviews the following partial output of the /proc/meminfo and freecommands:

	total	used	free
Mem:	1011966	151930	860036
Swap:	1191972	1181716	10256
MemTotal:	1011966 kB		
MemFree:			
...			
SwapTotal:	1191972 kB		
SwapFree:	10256 kB		

Which of the following should the administrator do to ensure that the MySQL service will continue to run even if the system runs out of swap space? (Choose two.)

- A. Issue the sysctl -w vm.overcommit_memory=2 command. (Invalid key)
- B. Issue the sysctl -w vm.overcommit_ratio=100 command.

- C. Issue the `dd if=/dev/zero of=/swapfile bs=1024 count=65536` command.
- D. Issue the `mkswap /dev/sda2; swapon -v /dev/sda2` command.
- E. Reload the `/etc/fstab` file by issuing the `mount -a` command.(Not sufficient alone)
- F. Use disk quotas on the swap space to prevent MySQL from overutilizing the swap partition.

Answer: C,D

Explanation:

Creating a swap file with `dd if=/dev/zero of=/swapfile bs=1024 count=65536` allocates additional swap space that MySQL can use when RAM is exhausted.

Formatting and enabling a swap partition with `mkswap /dev/sda2; swapon -v /dev/sda2` brings another swap device online, further increasing the system's swap capacity.

NEW QUESTION # 24

A Linux user frequently tests shell scripts located in the `/home/user/scripts` directory. Which of the following commands allows the user to run the program by invoking only the script name?

- A. `export alias /home/user/scripts='/bin'`
- B. `export SHELL=$SHELL=/home/user/scripts`
- C. `export PATH=$PATH:/home/user/scripts`
- D. `export TERM=$TERM=/home/user/scripts`

Answer: C

Explanation:

By appending `/home/user/scripts` to the `PATH` environment variable, the user can execute scripts from that directory by simply typing the script name without specifying the full path.
