## Authorized ZDTA Exam Dumps & ZDTA Test Questions

Even in a globalized market, the learning material of similar ZDTA doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the ZDTA learning questions can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we ZDTA Exam Material provideds by the questions and answers are all in the past.it is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all ZDTA practice materials are high accuracy.

## Zscaler Digital Transformation Administrator Sample Questions (Q113-Q118):

### NEW QUESTION # 113

When configuring Zscaler Private Access, what is the function of the Server Group?

- A. Maps App Connector Groups to Application Segments
- **B. Maps FQDNs to IP Addresses**
- C. Maps Applications to Application Groups
- D. Maps Applications to FQDNs

**Answer: B**

Explanation:

A Server Group holds the actual backend endpoints - defined by FQDNs (or IPs) and ports - and effectively maps those FQDNs

to their IP addresses so ZPA knows which hosts to steer traffic toward.

#### NEW QUESTION # 114

What does an Endpoint refer to in an API architecture?

- A. Zscaler API gateway providing access to various components
- **B. A URL providing access to a specific resource**
- C. Zscaler public service edges
- D. An end-user device like a laptop or an OT/IoT device

**Answer: B**

Explanation:

In API architecture, an Endpoint is defined as a URL or URI that provides access to a specific resource or service within the API. It acts as a point of interaction where clients send requests and receive responses. This is a standard definition across API implementations, including Zscaler's API framework, where each endpoint represents a distinct function or data resource accessible via the API.

Option A refers to physical devices, which are not considered endpoints in API terms. Option C describes network infrastructure components but not API endpoints. Option D describes an API gateway, which manages API traffic but is not itself an endpoint. This explanation is consistent with the Zscaler Digital Transformation study guide's section on Integration and APIs, which clarifies that API endpoints are URLs pointing to specific resources or services within the API framework.

#### NEW QUESTION # 115

A user is accessing a private application through Zscaler with SSL Inspection enabled. Which certificate will the user see on the browser session?

- **A. Zscaler generated MITM Certificate**
- B. Real Server Certificate
- C. A self-signed certificate from Zscaler
- D. No certificate, as the session is decrypted by the Service Edge

**Answer: A**

Explanation:

When SSL Inspection is enabled and a user accesses a private application through Zscaler, the user will see a Zscaler generated MITM (Man-In-The-Middle) Certificate on their browser session. Zscaler intercepts and decrypts SSL/TLS traffic at the Service Edge and then re-encrypts it before forwarding it to the client, presenting its own certificate to maintain the security of the connection while enabling inspection.

This allows Zscaler to inspect encrypted traffic for threats and policy enforcement transparently without exposing the original server's certificate. The study guide clarifies this mechanism under SSL Inspection details.

#### NEW QUESTION # 116

During the authentication process while accessing a private web application, how is the SAML assertion delivered to the service provider?

- **A. Form POST via the browser**
- B. HTTP Redirect on the browser
- C. API request/response sequence
- D. Through the client connector

**Answer: A**

Explanation:

During authentication to a private web application, the SAML assertion is delivered to the service provider via a Form POST through the browser. This standard SAML mechanism involves the browser receiving the assertion from the IdP and then POSTing it to the service provider to complete the authentication flow.

### NEW QUESTION # 117

Which Zscaler forwarding mechanism creates a loopback address on the machine to forward the traffic towards Zscaler cloud?

- A. ZTunnel - Packet Filter Based
- B. Enforced PAC mode
- C. ZTunnel - Route Based
- **D. ZTunnel with Local Proxy**

**Answer: D**

Explanation:

The forwarding mechanism called ZTunnel with Local Proxy creates a loopback address on the machine to forward traffic to the Zscaler cloud. This local proxy intercepts client traffic on the loopback interface and securely forwards it through the Zscaler cloud, providing flexibility and control over traffic forwarding.

### NEW QUESTION # 118

.....

A lot of our new customers don't know how to buy our ZDTA exam questions. In fact, it is quite easy. You just need to add your favorite ZDTA exam guide into cart. When you finish shopping, you just need to go back to the shopping cart to pay money for our ZDTA Study Materials. The whole process is quickly. And you have to remember that we only accept payment by credit card. And you will find that you can receive the ZDTA learning prep in a few minutes.
