Salesforce Certified MuleSoft Developer II Sample Questions (Q19-Q24):

NEW QUESTION # 19
Refer to the exhibit.
What action must be performed to log all the errors raised by the VM Connector?

- A. Add <AsyncLOgger name='orgroute.extensions vm' level=ERROR'I> inside the Logger tag
- B. Nothing, as error-level events are automatically logged
- C. Add <AsyncLOgger name='orgroute.extensions vm' level=ERROR'/> inside the Appenders tag
- D. Configure <Logger level-'ERROR'/> inside the VM Connector configuration

Answer: C

Explanation:
To log all the errors raised by the VM Connector, the developer needs to add an async logger with the name 'org.mule.extension.vm' and the level 'ERROR' inside the appenders tag of the log4j2.xml file. This will enable logging all error-level events generated by the VM Connector to the console appender. Reference: https://docs.mulesoft.com/mule-runtime/4.3/logging-in-mule#configuring-custom-logging-settings

NEW QUESTION # 20
A Mule implementation uses a HTTP Request within an Unit Successful scope to connect to an API.
How should a permanent error response like HTTP:UNAUTHORIZED be handle inside Until Successful to reduce latency?

- A. Put the HTTP Request inside a try scope in Unit Successful.
  In the error handler, use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED.
- B. Put the HTTP Request inside a try scope in Unit Successful.
  In the error handler, use On Error Propagate to catch permanent errors like HTTP UNAUTHORIZED.
- C. In Until Successful configuration, set the retry count to 1 for error type HTTP: UNAUTHORIZED.
- D. Configure retrying until a MULERETRY_EXHAUSTED error is raised or the API responds back with a successful response.

Answer: A

Explanation:
To handle a permanent error response like HTTP:UNAUTHORIZED inside Until Successful, the developer should put the HTTP Request inside a try scope in Unit Successful, and use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED in the error handler. This way, the developer can avoid retrying requests that will always fail due to a permanent error, and reduce latency. On Error Continue allows the flow to continue processing after handling the error. Reference: https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept

NEW QUESTION # 21
Refer to the exhibit.
What is the result if "Insecure" selected as part of the HTTP Listener configuration?

- A. The HTTP listener will only accept HTTP requests
- B. The HTTP Listener will trust any certificate presented by the HTTP client
- C. The HTTP Lister will accept any unauthenticated request
- D. Mutual TLS authentication will be enabled between this HTTP Listener and an HTTP client

Answer: A

Explanation:
Based on the exhibit below, if 'Insecure' is selected as part of the HTTP Listener configuration, the HTTP listener will only accept HTTP requests. This means that no TLS context will be configured for this listener and no encryption or authentication will be applied to incoming requests. The protocol attribute of this listener will be set to HTTP instead of HTTPS. Reference: https://docs.mulesoft.com/http-connector/1.6/http-listener-ref#insecure

NEW QUESTION # 22
Multiple individual Mute application need to use the Mule Maven plugin to deploy to CloudHub.
The plugin configuration should .. reused where necessary and anything project, specific should be property-based.
Where should the Mule Maven details be configured?

- A. Settings, xml
- B. Pom, xml
- C. A parent pom.xml
- D. A Bill of Materials (BOM) parent pm

Answer: C

Explanation:
To reuse Mule Maven plugin configuration across multiple individual Mule applications, the developer should use a parent pom.xml file. A parent pom.xml file defines common configuration for one or more child projects that inherit from it. The developer can specify common properties and dependencies for all child projects in the parent pom.xml file, such as Mule Maven plugin configuration, and then reference them in each child project's pom.xml file using placeholders. Reference: https://docs.mulesoft.com/mule-runtime/4.3/mmp-concept#parent-pom https://maven.apache.org/guides/introduction/introduction-to-the-pom.html#Project_Inheritance

NEW QUESTION # 23
Which properties are mandatory on the HTTP Connector configuration in order to use the OAuth 2.0 Authorization Code grant type

for authentication?

- A. External callback URL, access token URL, client ID, response refresh token
- B. External callback URL, access token URL, client ID response access token
- C. Token URL, authorization URL, client ID, client secret local callback URL
- D. External callback URL, access token URL, local authorization URL, authorization URL, client ID, client secret

Answer: D

Explanation:
To use the OAuth 2.0 Authorization Code grant type for authentication, the HTTP Connector configuration requires the following properties: token URL, authorization URL, client ID, client secret, and local callback URL. The token URL is the endpoint of the authorization server that provides access tokens. The authorization URL is the endpoint of the authorization server that initiates the user consent flow. The client ID and client secret are the credentials of the Mule application registered with the authorization server. The local callback URL is the endpoint of the Mule application that receives the authorization code from the authorization server.
