# VCE ARA-C01 Exam Simulator | ARA-C01 Latest Exam Simulator

P.S. Free & New ARA-C01 dumps are available on Google Drive shared by PracticeTorrent: https://drive.google.com/open?id=1kF1k02ZOdyygAm3cCBrbhIMLH7Xmsi36

The SnowPro Advanced Architect Certification certification has become very popular to survive in today's difficult job market in the technology industry. Every year, hundreds of Snowflake aspirants attempt the ARA-C01 exam since passing it results in well-paying jobs, salary hikes, skills validation, and promotions. Lack of Real ARA-C01 Exam Questions is their main obstacle during ARA-C01 certification test preparation.

The PracticeTorrent is one of the top-rated and leading platforms that offer real and exam trainers verified SnowPro Advanced Architect Certification ARA-C01 practice test questions. These SnowPro Advanced Architect Certification ARA-C01 exam questions are designed after deep research and verified by qualified Snowflake ARA-C01 exam preparation experts. So rest assured that you will get the top-notch PracticeTorrent ARA-C01 exam questions. These PracticeTorrent ARA-C01 exam questions are the ideal SnowPro Advanced Architect Certification ARA-C01 exam preparation material that will prepare you to perform well for the final SnowPro Advanced Architect Certification ARA-C01 Certification Exam. So rest assured that with the PracticeTorrent ARA-C01 exam questions you will get everything that is necessary for ARA-C01 exam preparation and success. Take a decision right now and just get registered in Snowflake ARA-C01 certification exam and start preparation with PracticeTorrent ARA-C01 exam questions. The PracticeTorrent is committed since the beginning to offer the top-notch SnowPro Advanced Architect Certification ARA-C01 exam questions to SnowPro Advanced Architect Certification ARA-C01 exam candidates.

Useful Snowflake VCE ARA-C01 Exam Simulator Are Leading Materials & First-Grade ARA-C01 Latest Exam Simulator

Do you have tried the ARA-C01 online test engine? Here we will recommend the ARA-C01 online test engine offered by PracticeTorrent for all of you. Firstly, ARA-C01 online training can simulate the actual test environment and bring you to the mirror scene, which let you have a good knowledge of the actual test situation. Secondly, the ARA-C01 online practice allows self-assessment, which can bring you some different experience during the preparation. You can adjust your ARA-C01 study plan

according to the test result after each practice test.

Snowflake ARA-C01 (SnowPro Advanced Architect Certification) Exam is a certification exam that validates the skills and knowledge required to design and implement complex Snowflake solutions. It is a professional-level certification that is designed for architects who have extensive experience working with Snowflake and want to demonstrate their expertise in the field. ARA-C01 Exam Tests the aspirant's ability to design, architect, and implement Snowflake solutions that meet complex business requirements.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q144-Q149):

NEW QUESTION # 144
Is it possible for a data provider account with a Snowflake Business Critical edition to share data with an Enterprise edition data consumer account?

- A. If a user in the provider account with role authority to create or alter share adds an Enterprise account as a consumer, it can import the share.
- B. If a user in the provider account with a share owning role which also has override share restrictions privilege share_restrictions set to False when adding an Enterprise consumer account, it can import the share.
- C. If a user in the provider account with a share owning role sets share_restrictions to False when adding an Enterprise consumer account, it can import the share.
- D. A Business Critical account cannot be a data sharing provider to an Enterprise consumer. Any consumer accounts must also be Business Critical.

Answer: B

NEW QUESTION # 145
When a cloned table is replicated to a secondary database, the data also gets replicated in the secondary database

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 146
Assuming all Snowflake accounts are using an Enterprise edition or higher, in which development and testing scenarios would be copying of data be required, and zero-copy cloning not be suitable? (Select TWO).

- A. Developers create their own copies of a standard test database previously created for them in the development account, for their initial development and unit testing.
- B. Production and development run in different databases in the same account, and Developers need to see production-like data but with specific columns masked.
- C. Data is in a production Snowflake account that needs to be provided to Developers in a separate development/testing Snowflake account in the same cloud region.
- D. The release process requires pre-production testing of changes with data of production scale and complexity. For security reasons, pre-production also runs in the production account.
- E. Developers create their own datasets to work against transformed versions of the live data.

Answer: C,E

Explanation:
Zero-copy cloning is a feature that allows creating a clone of a table, schema, or database without physically copying the data. Zero-copy cloning is suitable for scenarios where the cloned object needs to have the same data and metadata as the original object, and where the cloned object does not need to be modified or updated frequently. Zero-copy cloning is also suitable for scenarios where the cloned object needs to be shared within the same Snowflake account or across different accounts in the same cloud region2 However, zero-copy cloning is not suitable for scenarios where the cloned object needs to have different data or metadata than the original object, or where the cloned object needs to be modified or updated frequently.
Zero-copy cloning is also not suitable for scenarios where the cloned object needs to be shared across different accounts in different cloud regions. In these scenarios, copying of data would be required, either by using the COPY INTO command or by using data sharing with secure views3 The following are examples of development and testing scenarios where copying of data would be

required, and zero-copy cloning would not be suitable:
* Developers create their own datasets to work against transformed versions of the live data. This scenario requires copying of data because the developers need to modify the data or metadata of the cloned object to perform transformations, such as adding, deleting, or updating columns, rows, or values. Zero-copy cloning would not be suitable because it would create a read-only clone that shares the same data and metadata as the original object, and any changes made to the clone would affect the original object as well4
* Data is in a production Snowflake account that needs to be provided to Developers in a separate
* development/testing Snowflake account in the same cloud region. This scenario requires copying of data because the data needs to be shared across different accounts in the same cloud region. Zero-copy cloning would not be suitable because it would create a clone within the same account as the original object, and it would not allow sharing the clone with another account. To share data across different accounts in the same cloud region, data sharing with secure views or COPY INTO command can be used5 The following are examples of development and testing scenarios where zero-copy cloning would be suitable, and copying of data would not be required:
* Production and development run in different databases in the same account, and Developers need to see production-like data but with specific columns masked. This scenario can use zero-copy cloning because the data needs to be shared within the same account, and the cloned object does not need to have different data or metadata than the original object. Zero-copy cloning can create a clone of the production database in the development database, and the clone can have the same data and metadata as the original database. To mask specific columns, secure views can be created on top of the clone, and the developers can access the secure views instead of the clone directly6
* Developers create their own copies of a standard test database previously created for them in the development account, for their initial development and unit testing. This scenario can use zero-copy cloning because the data needs to be shared within the same account, and the cloned object does not need to have different data or metadata than the original object. Zero-copy cloning can create a clone of the standard test database for each developer, and the clone can have the same data and metadata as the original database. The developers can use the clone for their initial development and unit testing, and any changes made to the clone would not affect the original database or other clones7
* The release process requires pre-production testing of changes with data of production scale and complexity. For security reasons, pre-production also runs in the production account. This scenario can use zero-copy cloning because the data needs to be shared within the same account, and the cloned object does not need to have different data or metadata than the original object. Zero-copy cloning can create a clone of the production database in the pre-production database, and the clone can have the same data and metadata as the original database. The pre-production testing can use the clone to test the changes with data of production scale and complexity, and any changes made to the clone would not affect the original database or the production environment8

NEW QUESTION # 147
The insertReport endpoint can be thought of like the UNIX command tail

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 148

A user, analyst_user has been granted the analyst_role, and is deploying a SnowSQL script to run as a background service to extract data from Snowflake.

What steps should be taken to allow the IP addresses to be accessed? (Select TWO).

- A. ALTERUSERANALYST_USERSETNETWORK_POLICY='10.1.1.20';
- B. USE ROLE USERADMIN;
  CREATE OR REPLACE NETWORK POLICY ANALYST_POLICY
  ALLOWED_IP_LIST = ('10.1.1.20');
- C. ALTERROLEANALYST_ROLESETNETWORK_POLICY='ANALYST_POLICY';
- D. ALTERUSERANALYSTJJSERSETNETWORK_POLICY='ANALYST_POLICY';
- E. USE ROLE SECURITYADMIN;
  CREATE OR REPLACE NETWORK POLICY ANALYST_POLICY ALLOWED_IP_LIST =
  ('10.1.1.20');

Answer: D,E

Explanation:
To ensure that an analyst_user can only access Snowflake from specific IP addresses, the following steps are required:
* Option B: This alters the network policy directly linked to analyst_user. Setting a network policy on the user level is effective and ensures that the specified network restrictions apply directly and exclusively to this user.
* Option D: Before a network policy can be set or altered, the appropriate role with permission to manage network policies must be used. SECURITYADMIN is typically the role that has privileges to create and manage network policies in Snowflake. Creating a network policy that specifies allowed IP addresses ensures that only requests coming from those IPs can access Snowflake under this policy.
After creation, this policy can be linked to specific users or roles as needed.
Options A and E mention altering roles or using the wrong role (USERADMIN typically does not manage network security settings), and option C incorrectly attempts to set a network policy directly as an IP address, which is not syntactically or functionally valid.References: Snowflake's security management documentation covering network policies and role-based access controls.

NEW QUESTION # 149
......

ARA-C01 real dumps revised and updated according to the syllabus changes and all the latest developments in theory and practice, our SnowPro Advanced Architect Certification real dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of ARA-C01 Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario.
