PEGACPRSA22V1資格取得講座 & PEGACPRSA22V1復習対策書

当社のWebサイトにある優れたPEGACPRSA22V1学習教材の助けを借りてPEGACPRSA22V1試験を受ける準備ができている場合、選択は素晴らしいものになります。PEGACPRSA22V1トレーニング資料は優れた選択肢であり、特にPEGACPRSA22V1試験に時間をかけずに合格し、成功することに熱心な方に役立ちます。それに加えて、PEGACPRSA22V1の調査問題には3つのバージョンがあります。PDFバージョン、ソフトバージョン、およびAPPバージョンです。これらは興味深く、選択するのに役立ちます。

Pegasystems Certified Pega Robotics System Architect 22 認定 PEGACPRSA22V1 試験問題 (Q50-Q55):

質問 # 50

Deploying a robotic project to Pega Robot Manager requires configuring the Pega server and credentials.

The server connectivity settings can be set up or adjusted in several ways.

Which three of the following options are methods to set up or adjust the Pega Server settings? (Choose Three)

- A. Edit the Server Connectivity settings in the Tools menu in Pega Robot Studio.
- B. Edit the Change Server fields during the deployment process.
- C. Rerun the Pega Robot Studio installation and configure the server settings.
- D. Manually edit the PegaStudioConfig.xml file from the Tools menu in Pega Robot Studio.
- E. Configure the server settings during the initial installation of Pega Robot Studio.

正解: A、B、E

解説:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

Pega Robot Studio provides multiple ways to configure or modify Pega Server connectivity settings used for Robot Manager deployment. These settings define the server URL, operator credentials, and authentication method.

According to the Pega Robotics System Design and Implementation Guide, section "Configuring Pega Server Connectivity":

"Server connectivity settings can be specified in multiple ways within Pega Robot Studio:

- * During the initial installation process, when prompted to enter Robot Manager URL and credentials.
- * By navigating to the Tools # Options # Server Connectivity menu to edit or test server details.
- * By adjusting the Change Server fields that appear during the deployment process to override existing configurations. Manual editing of XML files is not recommended for changing server connectivity settings." Detailed Reasoning:
- * A. Edit the Change Server fields during the deployment process - Correct. The deployment wizard allows adjusting or overriding existing server settings.
- * B. Configure the server settings during the initial installation of Pega Robot Studio - Correct. The installation wizard prompts for server setup.
- * C. Rerun the Pega Robot Studio installation and configure the server settings - Not necessary unless reinstallation is required.
- * D. Manually edit the PegaStudioConfig.xml file - Not recommended or supported for changing connectivity.
- * E. Edit the Server Connectivity settings in the Tools menu in Pega Robot Studio - Correct. This is the standard interface to modify or test connection settings.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Server Connectivity and Deployment Configuration section (Pega Robotics 19.1 and later).

質問 # 51

When interrogating an application in a Chrome or Edge browser without X-ray Vision enabled, Pega Robot Studio uses only three match rules to uniquely identify the control. Which three match rules does Pega Robot Studio use when interrogating Chrome or Edge? (Choose Three)

- A. Web Control Children match rule
- B. Attribute Value match rule
- C. Property Value match rule
- D. Native Control match rule
- E. Control Children match rule
- F. Element Path match rule

正解: B、C、F

解説:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

According to the Pega Robotics Interrogation and Matching Engine Documentation:

"When you interrogate controls in a web application using Chrome or Edge browsers without X-ray Vision, Pega Robot Studio utilizes a simplified set of match rules because these browsers do not expose a full DOM structure with automation identifiers." The documentation specifies:

"In non-X-ray Vision interrogation mode, the following three match rules are applied automatically to identify a control:

- * Attribute Value Match Rule - Matches a control by its defined attribute (such as 'id', 'name', or 'class').
- * Property Value Match Rule - Matches the control based on its property values exposed during interrogation (for example, 'InnerText' or 'TagName').
- * Element Path Match Rule - Matches the control by its relative position in the DOM hierarchy." It also states:

"Without X-ray Vision, browser-specific identifiers and deep hierarchical context are not available; therefore, only the Attribute Value, Property Value, and Element Path rules are utilized for Chrome and Edge interrogation." References (Exact Extract Source):

- * Pega Robotics Studio User Guide - Web Adapter and Match Rules Section
- * Pega Academy - Robotics System Architect Course (Interrogation in Web Applications)
- * Pega Robotics Help - Interrogation with and without X-ray Vision

Final Verified answer: B, C, F

質問 # 52

The business requirements states that the login automation creates a Success or Failed response when attempting to log in to the finance application. If a failure occurs, the automation should pass a message code with the Message Manifest before exiting the automation.

Which image represents the exit logic?

□

- A. Exhibit D
- B. Exhibit B
- C. Exhibit A
- D. Exhibit C

正解: D

質問 # 53

While setting up Start My Day, the user makes some changes in the Manage Applications window to prioritize and manage the applications that are configured to launch using the Start My Day functionality.

Which of the following applications does the user see on the desktop after using the Start My Day functionality?

- A. CRM, BankerInsight
- B. CRM, Notepad, BankerInsight
- C. Pega Finance, CRM, Notepad, BankerInsight
- D. Pega Finance, Notepad, BankerInsight

正解: D

解説:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, the Start My Day (SMD) functionality allows a user to define and launch all required applications at once when starting work. The configuration of these applications is performed in the Manage Applications window, where each application can be individually enabled or disabled for automatic startup.

According to the Pega Robotics System Design and Implementation Guide, in the section "Start My Day Configuration and Manage Applications", the documentation specifies the following:

"Applications configured for Start My Day will launch automatically when the Start My Day feature is invoked.

The Manage Applications dialog lists all project applications and determines which ones are launched using the 'Enabled' checkbox. Only applications marked as enabled will be started when the user initiates Start My Day. Applications that are listed but not enabled remain closed." The screenshot in the question shows the following configuration under the Manage Applications window:

Application

Enabled

Type

Path

Pega Finance

Yes

Adapter

BankerInsight

Yes

Adapter

C:\Program Files (x86)\CRM Setup\CRM.exe

CRM

No

Exe

C:\Program Files (x86)\CRM Setup\CRM.exe

Notepad

Yes

Exe

C:\Windows\notepad.exe

From this configuration, the Enabled column indicates that the following applications will start automatically when Start My Day is triggered:

- * Pega Finance
- * BankerInsight
- * Notepad

The CRM application is not enabled and therefore will not launch.

Option Analysis:

- * Option A (Pega Finance, Notepad, BankerInsight): Correct, as these are the enabled applications.
- * Option B (CRM, BankerInsight): Incorrect, because CRM is not enabled.
- * Option C (CRM, Notepad, BankerInsight): Incorrect, because CRM is not enabled.
- * Option D (Pega Finance, CRM, Notepad, BankerInsight): Incorrect, because CRM is not enabled.

Therefore, the correct answer is A. Pega Finance, Notepad, BankerInsight.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Start My Day (SMD) Configuration and Application Management section (Pega Robotics 19.1 and later).

質問 # 54

While interrogating a web application, you discover a hidden menu item: AddressType. The AddressType menu item activates when the pointer hovers over the control, and the menu displays a drop-down list.

Which two options can you use to interrogate this hidden drop-down list control? (Choose Two)

- A. On the Application tab, click the Virtual Controls tab.
- **B. Use the Delay option on the Interrogation Form.**
- **C. On the Interrogation Form, select Select Element.**
- D. In the Interrogation Form dialog box, select HTML Table Editor.
- E. On the Web Controls tab, select the page, and then click List Web Controls.

正解: B、C

解説:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

During interrogation of web applications, developers often encounter dynamic or hidden controls - such as drop-down menus or hover-triggered lists - that do not immediately appear on the page.

To successfully interrogate these elements, Pega Robot Studio provides two essential tools:

- * The Delay option on the Interrogation Form, which allows the developer time to trigger the hidden control before capture.
- * The Select Element option, which enables precise selection of an element directly from the DOM, even if it is not immediately visible.

According to the Pega Robotics System Design and Implementation Guide, section "Interrogating Dynamic and Hidden Web Controls":

"When interrogating hidden or dynamically rendered controls:

- * Use the Delay option on the Interrogation Form to give yourself time to hover over or activate a hidden control before Robot Studio attempts to capture it.
- * Use the Select Element option to manually highlight and select a control from the web application's DOM, even when it is displayed only after an interaction such as mouse hover. These methods are particularly effective for controls that expand or render asynchronously, such as drop-down menus or tooltip-triggered elements." Detailed Step Reasoning:
- * C. Use the Delay option on the Interrogation Form
- * Correct.
- * The Delay setting pauses the interrogation process for a specified number of seconds, allowing you to hover over the hidden element (e.g., AddressType menu) and make it visible before capture.
- * Once the menu appears, Pega Robot Studio can detect and interrogate it.
- * D. On the Interrogation Form, select Select Element.
- * Correct.
- * The Select Element tool allows manual selection of an element directly from the web page's HTML DOM structure.
- * This is especially useful for hidden or dynamically rendered elements like the AddressType dropdown that may not be visible until hovered over.

Incorrect Options Explained:

- * A. In the Interrogation Form dialog box, select HTML Table Editor.
- * Incorrect.
- * The HTML Table Editor is used to inspect and modify HTML table-based controls (grid or table structures), not dynamic menus.
- * B. On the Web Controls tab, select the page, and then click List Web Controls.
- * Incorrect.
- * The List Web Controls option lists already recognized controls in the DOM but cannot reveal or capture hidden dynamic elements.

* E. On the Application tab, click the Virtual Controls tab.

* Incorrect.

* Virtual Controls are used for defining custom controls when the default adapter cannot identify one, not for capturing hidden menu elements.

Final Correct answer:

C). Use the Delay option on the Interrogation Form.

D). On the Interrogation Form, select Select Element.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Interrogating Dynamic, Hidden, and Hover-Activated Controls section (Pega Robotics 19.1 and later).

質問 #55
