Constant learning is necessary in modern society. If you stop learning new things, you cannot keep up with the times. Our SC-401 study materials cover all newest knowledge for you to learn. In addition, our SC-401 learning braindumps just cost you less time and efforts. And we can claim that if you prepare with our SC-401 Exam Questions for 20 to 30 hours, then you are able to pass the exam easily. What are you looking for? Just rush to buy our SC-401 practice engine!

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 2	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 3	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 4	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.

Administering Information Security in Microsoft 365 Clear Exam

Each format of the Microsoft Certification Exams not only offers updated exam questions but also additional benefits. A free trial of the Administering Information Security in Microsoft 365 (SC-401) exam dumps prep material before purchasing, up to 1 year of free updates, and a money-back guarantee according to terms and conditions are benefits of buying Administering Information Security in Microsoft 365 (SC-401) real questions today. A support team is also available 24/7 to answer any queries related to the Administering Information Security in Microsoft 365 (SC-401) exam dumps.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q93-Q98):

NEW QUESTION # 93

You have a Microsoft 365 ES subscription that contains two Windows devices named Device1 and Device2. Device1 has the default browser set to Microsoft Edge. Device2 has the default browser set to Google Chrome.

You need to ensure that Microsoft Purview Insider Risk Management can collect signals when a user copies files to a USB device by using their default browser.

What should you deploy to each device? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Step 1 - Scenario

The requirement is to ensure Microsoft Purview Insider Risk Management can collect signals when a user copies files to a USB device using their default browser. The devices differ by browser type:

Device1 # Default browser = Microsoft Edge

Device2 # Default browser = Google Chrome

Step 2 - Signal collection methods in Insider Risk Management

Insider Risk Management uses Microsoft Purview Information Protection client and Purview browser extensions to collect activity signals.

For Microsoft Edge (Chromium-based), insider risk signals are collected via the Microsoft Purview Information Protection client.

For Google Chrome, signals are collected through the Microsoft Purview extension (available in the Chrome Web Store).

The Microsoft Defender Browser Protection extension is for web protection against malicious sites, not for insider risk activity signals, so it is irrelevant here.

Step 3 - Microsoft Reference

Microsoft documentation:

"For insider risk signals collection in Microsoft Edge, the Microsoft Purview client must be deployed. For Google Chrome, the Microsoft Purview extension is required." Reference: Insider risk management activity signals

NEW QUESTION # 94

Hotspot Question

You have a Microsoft 365 subscription that contains the sensitive information types (SITs) shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: all of the SITs

There are two methods for creating a new SIT:

Create a new SIT from scratch

Copy and modify an existing SIT

Copy and modify an existing SIT

These SITs can't be copied:

Canada driver's license number

EU driver's license number
EU national identification number
EU passport number
EU social security number or equivalent identification
EU tax identification number
International classification of diseases (ICD-10-CM)
International classification of diseases (ICD-9-CM)
U.S. driver's license number
Box 2: Adatum document patterns and Adatum numbers only

NEW QUESTION # 95

You have a Microsoft 365 subscription that contains a sensitivity label named Contoso Confidential. You publish Contoso Confidential to all users. Contoso Confidential is configured as shown in the Configuration exhibit. (Click the Configuration tab.)

The Access control settings of Contoso Confidential are configured as shown in the Access control exhibit. (Click the Access control tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 96

You have a Microsoft 365 subscription. You plan to retain the following audit log record types and activities for the next three years.

* CopilotInteraction: All activities selected (1/1)

Interacted with Copilot

* Compliance DLP endpoint: All activities selected (2/2)

Matched DIP rule

Removed DIP rule from document

* AzureActiveDirectory 2 of 25 activities selected (2/25)

Reset user password Changed user password

What is the minimum number of audit retention policies you should create to retain only the selected record types and activities?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
Step 1 - Understanding the requirement
You want to retain specific audit log record types and activities for 3 years:
CopilotInteraction # All activities (1/1)
Compliance DLP endpoint # All activities (2/2)
Azure Active Directory # Only 2 out of 25 activities selected (Reset user password, Changed user password) The goal is to minimize the number of audit retention policies while meeting the requirement to store only the selected record types and activities.
Step 2 - Audit retention policies in Microsoft Purview
Audit retention policies let you define which activities and record types are retained and for how long. A single retention policy can include multiple record types and multiple activities.
Limitation: Each policy can only define one set of retention settings per included record types/activities.
If you want to retain different subsets of activities (e.g., only 2 out of 25 in Azure AD), you must create a separate policy for that.

Reference: Set up audit (Premium) retention policies in Microsoft Purview Step 3 - Applying to the scenario CopilotInteraction: Since you need all activities, you can include them in one policy.

Compliance DLP endpoint: Since you also need all activities, they can be added to the same policy as CopilotInteraction.

These two can be covered by 1 policy.

Azure Active Directory: You only need 2 out of 25 activities. Since this requires activity-level filtering, it must be placed in a separate policy.

Thus:

Policy 1 # CopilotInteraction (all) + Compliance DLP endpoint (all)

Policy 2 # Azure AD "Reset user password"

Policy 3 # Azure AD "Changed user password"

That equals 3 total policies.

NEW QUESTION # 97

You have a Microsoft 365 alert named Alert2 as shown in the following exhibit.

□ You need to manage the status of Alert? To which status can you change Alette?

- A. The status cannot be changed.
- B. Investigating, Active, or Dismissed
- C. Active or Investigating only
- D. Investigating only
- E. Dismissed only

Answer: C

NEW QUESTION # 98
