Pass Guaranteed Quiz Nutanix - NCP-MCA - Perfect Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Valid Dumps Free

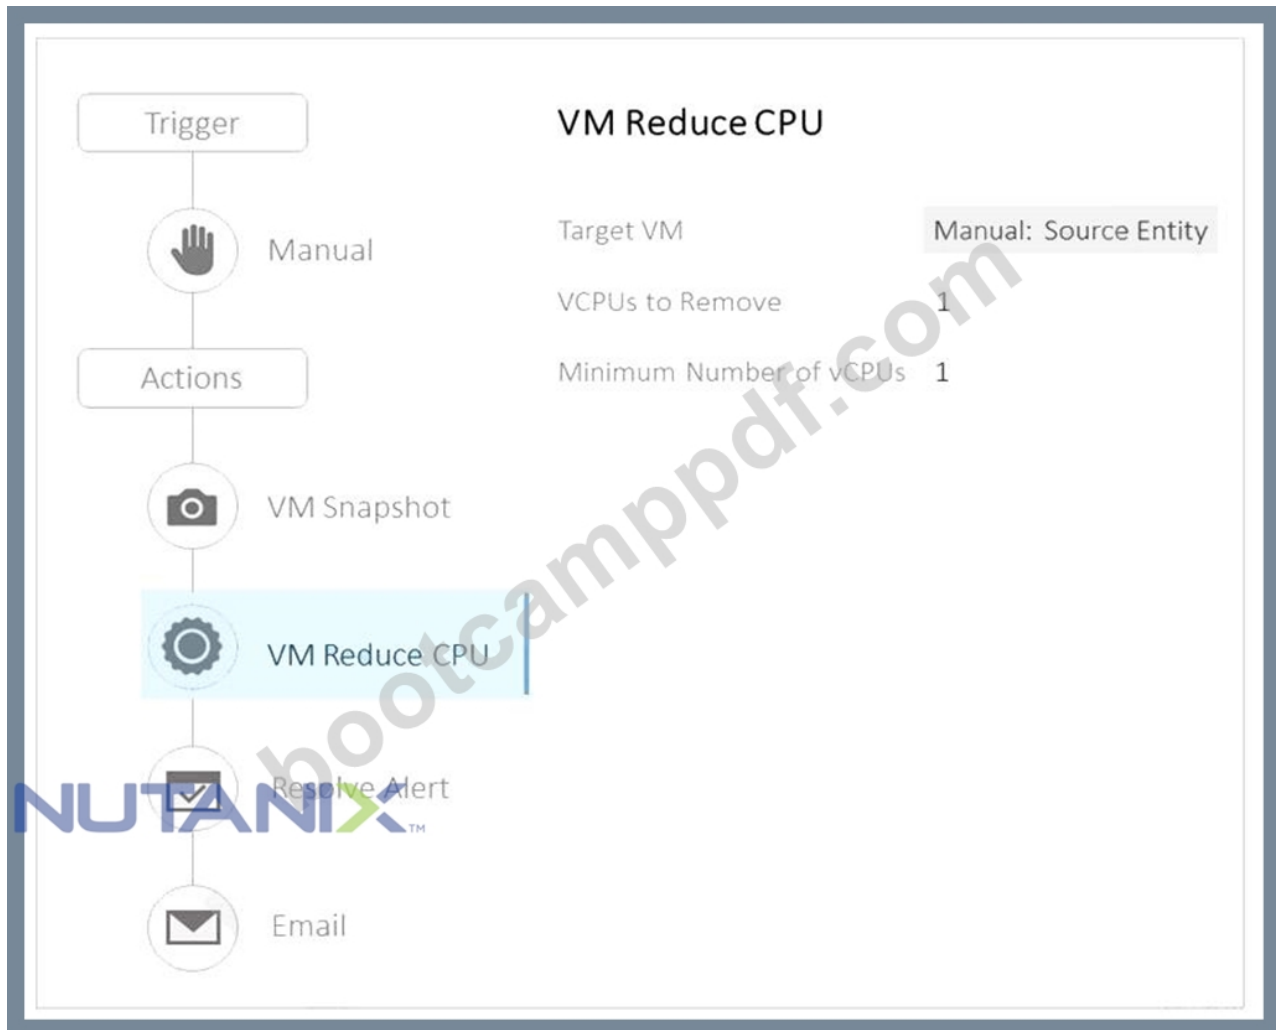

These formats are Nutanix PDF Questions and practice test software. The Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) NCP-MCA practice exam software is further divided into two formats. The name of these two formats is Nutanix NCP-MCA desktop practice test software and web-based Nutanix NCP-MCA practice test software. Both Nutanix NCP-MCA practice test software is the NCP-MCA Practice Exam that will give you a real-time NCP-MCA exam preparation environment to solve all Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) NCP-MCA questions. With the Nutanix NCP-MCA practice test software you can understand your weak topic areas. Later on, working on these Nutanix NCP-MCA weak topic areas you can make it perfect.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10)

Sample Questions (Q52-Q57):

NEW QUESTION # 52

Refer to the exhibit.

An administrator created the Playbook shown in the exhibit to allow for manual reduction of vCPU count on any selected VM within their environment. During a test run of the play on one of the VMs running in development, the administrator ran into an error that the Playbook cannot be completed against the selected VM.

Here are the details of the affected VM:

VM Name: VM2

vCPU: 4

RAM: 8 GB

OS: Windows 2016

Hypervisor: AHV

What caused this Playbook to fail?

- A. Reduction of vCPU cannot be done on a VM with a running snapshot.
- B. The play will cause the VM to go below the minimum vCPU.
- C. This play cannot be executed against a VM on AHV.
- D. The VM needs to be powered off before vCPU can be reduced.

Answer: A

NEW QUESTION # 53

An administrator needs to ensure Self-Service tracks IP address changes, disk resizing, and unavailability of VMs. The administrator wants to ensure this information is reported in a timely fashion.

Which providers are able to leverage Self-Service platform sync capabilities to ensure changes are reported within 20 minutes?

- A. Nutanix, Azure and AWS
- B. Nutanix, Hyper-V and Azure
- C. Nutanix, VMware and Hyper-V
- **D. Nutanix, VMware and AWS**

Answer: D

Explanation:

Comprehensive and Detailed Explanation

Self-Service platform sync allows Prism Central to periodically collect updates from external providers.

Nutanix documentation states that the providers supporting platform sync with a 20-minute update window are:

- * Nutanix (AHV)
- * VMware (vSphere)
- * AWS

These environments support the metadata collection necessary for tracking:

- * IP changes
- * Disk resizing
- * VM availability

Thus, the valid set is Nutanix, VMware, and AWS, making Option C correct.

NEW QUESTION # 54

When creating a playbook, which statement is true?

- **A. When using the trigger of Event, multiple actions can be added to the playbook.**
- B. When using the trigger of Webhook, multiple scriptable tasks can be added to the playbook.
- C. When using the trigger of Branch, multiple actions can be added to the playbook.
- D. When using the trigger of Alert, multiple alerts can be added to the playbook.

Answer: A

NEW QUESTION # 55

An application team wants faster releases and starts an initiative to automate the entire database and application deployments.

The current manual process involves:

Creating virtual machines to host the databases and applications

Allocate right amount of storage for the database and applications

Deploy database software and create database

Schedule backup and recovery process for the database

Deploy applications

How can application releases be repeatedly deployed in the least amount of time?

- A. Deploy databases through Era and create a Calm blueprint to automate application deployment
- **B. Create a Calm blueprint deploying applications and calling Era APIs to automate database deployments**
- C. Deploy databases manually and create a Calm blueprint to automate application deployment
- D. Create a Calm blueprint calling Calm APIs for both database and applications deployments

Answer: B

Explanation:

The best way to automate the entire database and application deployments is to use a combination of Nutanix Calm and Nutanix Era. Nutanix Calm is a multicloud automation platform that allows you to create blueprints to deploy and manage infrastructure and applications across different cloud environments. Nutanix Era is a database management platform that allows you to provision, clone, patch, refresh, and restore databases in a simplified and automated way. By creating a Calm blueprint that deploys applications and calls Era APIs to automate database deployments, you can achieve faster and consistent releases, as well as reduce the manual effort and complexity involved in the process. You can also leverage the features of Calm and Era, such as self-service, governance, showback, backup, and recovery, to enhance the efficiency and security of your deployments. Reference:

NEW QUESTION # 56

An administrator needs to send a notification to the on-call administrator if a specific mission-critical VM is rebooted after hours, as well as send an email to the Operations team for any other VMS that reboot.

What two actions should the administrator take to accomplish this task? (Choose two.)

- A. Use Branch Action
- B. use Conditional Playbook
- C. Create Playbook using Alert.
- D. Create Playbook using Manual Trigger

Answer: B,C

Explanation:

The administrator should use a conditional playbook and create a playbook using alert to accomplish this task. A conditional playbook is a type of playbook that allows the administrator to define different actions based on certain conditions or criteria¹. A playbook using alert is a type of playbook that is triggered by an alert policy that monitors the VM status². By using these two features, the administrator can create a playbook that checks if the rebooted VM is the mission-critical VM and sends a notification to the on-call administrator, or else sends an email to the Operations team.
