HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q50-Q55):

NEW QUESTION # 50

What information does the public Terraform Module Registry automatically expose about published modules?

- A. None of the above
- B. Required input variables
- C. Outputs
- D. Optional inputs variables and default values
- E. All of the above

Answer: E

Explanation:

Explanation

The public Terraform Module Registry automatically exposes all the information about published modules, including required input variables, optional input variables and default values, and outputs. This helps users to understand how to use and configure the modules.

NEW QUESTION # 51

terraform init creates an example main.tf file in the current directory.

- A. True
- B. False

Answer: B

Explanation:

Comprehensive and Detailed in-Depth Explanation: terraform init does not create a main.tf file.

* It initializes the Terraform working directory, downloads provider plugins, and configures the backend.

* Terraform does not generate an example configuration (main.tf); users must create it manually.

Official Terraform Documentation Reference: terraform init - HashiCorp Documentation

NEW QUESTION # 52

What feature stops multiple users from operating on the Terraform state at the same time?

- A. Remote backends
- **B. State locking**
- C. Version control
- D. Provider constraints

Answer: B

Explanation:

State locking prevents other users from modifying the state file while a Terraform operation is in progress. This prevents conflicts and data loss.

NEW QUESTION # 53

You are using a networking module in your Terraform configuration with the name label my-network. In your main configuration you have the following code:

When you run terraform validate, you get the following error:

What must you do to successfully retrieve this value from your networking module?

- **A. Define the attribute vnet_id as an output in the networking module**
- B. Change the reference value to my-network,outputs,vnet_id
- C. Define the attribute vnet_id as a variable in the networking module
- D. Change the reference value module.my-network,outputs,vnet_id

Answer: A

Explanation:

Explanation

This is what you must do to successfully retrieve this value from your networking module, as it will expose the attribute as an output value that can be referenced by other modules or resources. The error message indicates that the networking module does not have an output value named vnet_id, which causes the reference to fail.

NEW QUESTION # 54

You have never used Terraform before and would like to test it out using a shared team account for a cloud provider. The shared team account already contains 15 virtual machines (VM). You develop a Terraform configuration containing one VM. perform terraform apply, and see that your VM was created successfully.

What should you do to delete the newly-created VM with Terraform?

- A. The Terraform state file contains all 16 VMs in the team account. Execute terraform destroy and select the newly-created VM.
- **B. The Terraform state file only contains the one new VM. Execute terraform destroy.**
- C. Delete the VM using the cloud provider console and terraform apply to apply the changes to the Terraform state file.
- D. Delete the Terraform state file and execute terraform apply.

Answer: B

Explanation:

Explanation

This is the best way to delete the newly-created VM with Terraform, as it will only affect the resource that was created by your configuration and state file. The other options are either incorrect or inefficient.

NEW QUESTION # 55

.....

Whatever Terraform-Associate-003 Exam, you are taking; the study guides of ValidExam are there to help you get through the exam without any hassle.
