

Pass-Sure Reliable XDR-Analyst Dumps Ppt offer you accurate Exam Braindumps | Palo Alto Networks Palo Alto Networks XDR Analyst

Namirial solution	PSR SCA relevance	Key detail
Namirial Wallet (EUDI Wallet SCA)	Wallet Gateway + App + Studio enables integration of EUDI Wallet credentials as high-assurance SCA instruments under eIDAS 2.0 Art. 5f. Mandatory for financial institutions from December 2027.	Active EUDI Wallet Large Scale Pilot participant (Potential consortium); WaaS offering in development
QES via Namirial Sign Enterprise	Certificate-based authentication backed by a qualified certificate issued after rigorous identity proofing. Satisfies the SCA inheritance + possession combination for mandate setup, SEPA authorisations, and high-value payment actions. Disposable (single-use) certificates eliminate permanent storage overhead.	Multi-QTSP: Namirial S.p.A. (IT), Uanataka (ES) — cross-border SCA coverage
Namirial Archive (SCA compliance evidence)	PSR expands fraud liability: PSPs must retain tamper-proof SCA evidence per transaction. Qualified long-term archiving (QPRES / eArchiving) preserves audit trails with full legal validity for the retention period required by supervisors.	NF 461 certified (AFNOR, France); SAE QC2 qualified (ACN, Italy); eIDAS eArchiving compliant

2026 Latest BraindumpsIT XDR-Analyst PDF Dumps and XDR-Analyst Exam Engine Free Share: <https://drive.google.com/open?id=1hf07IXOQqbTL3jBgB2STcCC7IZAtUwcS>

If you want to become a future professional person in this industry, getting qualified by Palo Alto Networks certification is necessary. Now, pass your XDR-Analyst actual exam in your first time by the help of BraindumpsIT study material. Our XDR-Analyst pdf torrent contains the best relevant questions and verified answers which exactly matches with the XDR-Analyst Actual Exam and surely helps you to pass the exam. Besides, one year free update of XDR-Analyst practice torrent is available after purchase.

In order to meet different needs for candidates, we offer you three versions for XDR-Analyst exam cram, and you can choose the one you like. XDR-Analyst PDF version is printable, and you can print them into hard one if you like, you can learn them anywhere and anyplace. XDR-Analyst Soft test engine can simulate the real exam environment, so that you can know the process of the exam, and your confidence will be strengthened. XDR-Analyst Online Test engine support Android and iOS etc. You can have a general review since this version has testing history and performance review. All three versions have free update for one year, and the update version will be sent to you automatically.

Palo Alto Networks XDR-Analyst Exam Braindumps | XDR-Analyst Practice Test Fee

The browser-based version has all features of the desktop XDR-Analyst practice exam. You don't need special plugins or software installations to operate the web-based Palo Alto Networks XDR Analyst (XDR-Analyst) practice exam. This Palo Alto Networks XDR Analyst (XDR-Analyst) practice test is compatible with every browser such as MS Edge, Chrome, Internet Explorer, Firefox, Opera, and Safari. BraindumpsIT's web-based XDR-Analyst practice exam promotes self-assessment and self-study.

Palo Alto Networks XDR Analyst Sample Questions (Q37-Q42):

NEW QUESTION # 37

Cortex XDR Analytics can alert when detecting activity matching the following MITRE ATT&CKTM techniques.

- A. Exfiltration, Command and Control, Impact
- B. Exfiltration, Command and Control, Privilege Escalation
- **C. Exfiltration, Command and Control, Lateral Movement**
- D. Exfiltration, Command and Control, Collection

Answer: C

Explanation:

Cortex XDR Analytics is a feature of Cortex XDR that leverages machine learning and behavioral analytics to detect and alert on

malicious activity across the network and endpoint layers. Cortex XDR Analytics can alert when detecting activity matching the following MITRE ATT&CKTM techniques: Exfiltration, Command and Control, Lateral Movement, Execution, Persistence, Privilege Escalation, Defense Evasion, Credential Access, Discovery, and Collection. However, among the options given in the question, the correct answer is D, Exfiltration, Command and Control, Lateral Movement. These are three of the most critical techniques that indicate an advanced and persistent threat (APT) in the environment. Exfiltration refers to the technique of transferring data or information from the compromised system or network to an external location controlled by the adversary. Command and Control refers to the technique of communicating with the compromised system or network to provide instructions, receive data, or update malware. Lateral Movement refers to the technique of moving from one system or network to another within the same environment, usually to gain access to more resources or data. Cortex XDR Analytics can alert on these techniques by analyzing various data sources, such as network traffic, firewall logs, endpoint events, and threat intelligence, and applying behavioral models, anomaly detection, and correlation rules. Cortex XDR Analytics can also map the alerts to the corresponding MITRE ATT&CKTM techniques and provide additional context and visibility into the attack chain¹²³⁴ Reference:

NEW QUESTION # 38

Where would you view the WildFire report in an incident?

- A. under the gear icon --> Agent Audit Logs
- B. under Response --> Action Center
- C. on the HUB page at apps.paloaltonetworks.com
- D. next to relevant Key Artifacts in the incidents details page

Answer: D

Explanation:

To view the WildFire report in an incident, you need to go to the incident details page and look for the relevant key artifacts that are related to the WildFire analysis. A key artifact is a piece of evidence that is associated with an alert or an incident, such as a file hash, a registry key, an IP address, a domain name, or a full path. If a key artifact is related to a WildFire analysis, you will see a WildFire icon next to it, indicating that there is a WildFire report available for that artifact. You can click on the WildFire icon to view the report, which will show you the detailed information about the artifact, such as the verdict, the behavior, the severity, the signatures, and the screenshots¹².

Let's briefly discuss the other options to provide a comprehensive explanation:

B . under Response --> Action Center: This is not the correct answer. The Action Center is a feature that allows you to create and manage actions that you can perform on your endpoints, such as isolating, scanning, collecting files, or executing scripts. The Action Center does not show you the WildFire reports for the incidents, but it can help you to remediate the incidents by applying the appropriate actions³.

C . under the gear icon --> Agent Audit Logs: This is not the correct answer. The Agent Audit Logs are logs that show you the activities and events that occurred on the Cortex XDR agents, such as installation, upgrade, connection, policy update, or prevention. The Agent Audit Logs do not show you the WildFire reports for the incidents, but they can help you to troubleshoot the agent issues or verify the agent status⁴.

D . on the HUB page at apps.paloaltonetworks.com: This is not the correct answer. The HUB page is a web portal that allows you to access and manage your Palo Alto Networks applications, such as Cortex XDR, Cortex XSOAR, Prisma Cloud, or AutoFocus. The HUB page does not show you the WildFire reports for the incidents, but it can help you to navigate to the different applications or view the notifications and alerts⁵.

In conclusion, to view the WildFire report in an incident, you need to go to the incident details page and look for the relevant key artifacts that are related to the WildFire analysis. By viewing the WildFire report, you can gain more insights and context about the incident and the artifact.

NEW QUESTION # 39

What does the following output tell us?

- A. There is one low severity incident.
- B. Host shpapy_win10 had the most vulnerabilities.
- C. This is an actual output of the Top 10 hosts with the most malware.
- D. There is one informational severity alert.

Answer: C

Explanation:

The output shows the top 10 hosts with the most malware in the last 30 days, based on the Cortex XDR data. The output is sorted by the number of incidents, with the host with the most incidents at the top. The output also shows the number of alerts, the number of endpoints, and the percentage of endpoints for each host. The output is generated by using the ACC (Application Command Center) feature of Cortex XDR, which provides a graphical representation of the network activity and threat landscape. The ACC allows you to view and analyze various widgets, such as the Top 10 hosts with the most malware, the Top 10 applications by bandwidth, the Top 10 threats by count, and more .

Reference:

Use the ACC to Analyze Network Activity

Top 10 Hosts with the Most Malware

NEW QUESTION # 40

In the deployment of which Broker VM applet are you required to install a strong cipher SHA256-based SSL certificate?

- A. Agent Installer and Content Caching
- B. CSV Collector
- C. Agent Proxy
- D. Syslog Collector

Answer: A

Explanation:

The Agent Installer and Content Caching applet of the Broker VM is used to download and cache the Cortex XDR agent installation packages and content updates from Palo Alto Networks servers. This applet also acts as a proxy server for the Cortex XDR agents to communicate with the Cortex Data Lake and the Cortex XDR management console. To ensure secure communication between the Broker VM and the Cortex XDR agents, you are required to install a strong cipher SHA256-based SSL certificate on the Broker VM. The SSL certificate must have a common name or subject alternative name that matches the Broker VM FQDN or IP address. The SSL certificate must also be trusted by the Cortex XDR agents, either by using a certificate signed by a public CA or by manually installing the certificate on the endpoints. Reference:

Agent Installer and Content Caching

Install an SSL Certificate on the Broker VM

NEW QUESTION # 41

To create a BIOC rule with XQL query you must at a minimum filter on which field in order for it to be a valid BIOC rule?

- A. threat_event
- B. causality_chain
- C. event_type
- D. endpoint_name

Answer: C

Explanation:

To create a BIOC rule with XQL query, you must at a minimum filter on the event_type field in order for it to be a valid BIOC rule. The event_type field indicates the type of event that triggered the alert, such as PROCESS, FILE, REGISTRY, NETWORK, or USER_ACCOUNT. Filtering on this field helps you narrow down the scope of your query and focus on the relevant events for your use case. Other fields, such as causality_chain, endpoint_name, threat_event, are optional and can be used to further refine your query or display additional information in the alert. Reference:

Palo Alto Networks Certified Detection and Remediation Analyst (PCDRA) Study Guide, page 9 Palo Alto Networks Cortex XDR Documentation, BIOC Rule Query Syntax

NEW QUESTION # 42

.....

The content of our XDR-Analyst practice engine is chosen so carefully that all the questions for the XDR-Analyst exam are contained. And our XDR-Analyst study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently and at the same time you will get 100% success for sure. If you desire a XDR-Analyst Certification, our products are your best choice.

XDR-Analyst Exam Braindumps: https://www.braindumpsit.com/XDR-Analyst_real-exam.html

We offer you free demos under each version of XDR-Analyst practice materials, Grab the opportunity to learn, pass the XDR-Analyst Exam Braindumps - Palo Alto Networks XDR Analyst exam, and grow your career, The XDR-Analyst exam Dumps is compiled by IT Expert, BraindumpsIT offers a full refund guarantee according to terms and conditions if you are not satisfied with our Palo Alto Networks XDR Analyst (XDR-Analyst) product, Palo Alto Networks Reliable XDR-Analyst Dumps Ppt At the same time, we will give back your money once you fail.
