

주제	소개
주제 1	• Omniscripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.

주제 2	• Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.
주제 3	• Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
주제 4	• Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
주제 5	• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

시험패스에 유효한 Plat-Dev-210퍼펙트 최신버전 덤프자료 최신버전 공부자료

PassTIP에서 Salesforce인증 Plat-Dev-210덤프를 구입하시면 퍼펙트한 구매후 서비스를 제공해드립니다. Salesforce인증 Plat-Dev-210덤프가 업데이트되면 업데이트된 최신버전을 무료로 서비스로 드립니다. 시험에서 불합격성적표를 받으시면 덤프구매시 지불한 덤프비용은 환불해드립니다.

최신 Salesforce Developer Plat-Dev-210 무료샘플문제 (Q88-Q93):

질문 # 88

Refer to the exhibit below.

What is the reason that the fields fail to display the fetched data?

- A. The typeHead key is not in the correct format.
- B. Lookup Mode is selected in the properties of the Type Ahead Block.
- C. Use Data JSON is Not selected in the properties of the Type Ahead Block.
- D. FirstName, LastName, and BirthDate are not placed inside the Type Ahead Block.

정답: C

설명:

The Use Data JSON property must be selected in the properties of the Type Ahead Block in order to display the fetched data in the fields. The Lookup Mode property is used to specify the type of lookup to perform. The FirstName, LastName, and BirthDate fields can be placed inside or outside the Type Ahead Block. The typeHead key is in the correct format.

질문 # 89

A developer is troubleshooting an Integration Procedure with two elements: A Remote Action named FetchCart and a Response Action named ResponseCart.

In Preview, what JSON node shows the data sent to the Response Action?

- A. Response
- B. ResponseCartDebug
- C. FetchCart
- **D. ResponseCart**

정답: D

설명:

In Preview, the JSON node that shows the data sent to the Response Action is the name of the Response Action itself. In this case, it is ResponseCart. The other nodes show either the input data or the output data of the Integration Procedure.

질문 # 90

A developer configures a Flexcard with a DataRaptor data source that uses the params.id as an. When the developer clicks Views Data on the FlexCard, valid data displays. However, when the developer previews the layout, the FlexCard does not display. What could cause this error?

Choose 2 answers

- **A. The Data Node field for the FlexCard is empty.**
- **B. There is not Salesforce record for the FlexCard based on the Record Id in the layout's Test Data Source Settings.**
- C. The Record Id in the Test Data Source settings ins for the wrong record type.
- D. The attribute hasn't been configured to pass the data to the fields.

정답: A,B

설명:

The Data Node field for the FlexCard is required to specify which data source will be used to populate the FlexCard. If it is empty, the FlexCard will not display any data. The Record Id in the Test Data Source settings is used to preview the layout with a specific record. If there is no Salesforce record for that Record Id, the FlexCard will not display any data either.

질문 # 91

On a FlexCard canvas, several fields display with Salesforce data, but one of the fields shows only the label. What could cause this?

- A. In the FlexCard state, the Field type for the field does not match the type in the Salesforce record.
- B. There are No test Data test Parameters configured.
- **C. The field name in the FlexCard state does not match the DataRaptorExtract's Output JSON Path name.**
- D. In the Setup Pabel, {recordId} is misspelled in the Data Source Input Map.

정답: C

설명:

According to the FlexCard Designer Overview page, one possible cause of a field showing only the label is that "the field name in the FlexCard state does not match the DataRaptor Extract's Output JSON Path name".

질문 # 92

An integration Procedure uses an HTTP action to makea REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external wen service.

How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a Remote Action that calls the XMLStreamWriter class
- **B. Use a DataRaptor Transform to convert JSON to XML**
- C. Use a Remote Action that calls the XMLStreamReader class
- D. Use a DataRaptor Extract and check the XML checkbox on the Output JSON Path.

정답: B

설명:

According to the OmniStudio Developer Guide, "DataRaptor Transform actions can convert JSON to XML and vice versa."
Therefore, the correct answer is C.

질문 # 93
