

# Exam NCP-DB-6.10 Flashcards - NCP-DB-6.10 Latest Exam Online

You can easily get Nutanix NCP-DB-6.10 certified if you prepare with our Nutanix NCP-DB-6.10 questions. Our product contains everything you need to ace the NCP-DB-6.10 certification exam and become a certified professional. So what are you waiting for? Purchase this updated Nutanix NCP-DB-6.10 Exam Practice material today and start your journey to a shining career.

Getting the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) certification is the way to go if you're planning to get into Nutanix or want to start earning money quickly. Success in the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam of this credential plays an essential role in the validation of your skills so that you can crack an interview or get a promotion in an Nutanix company. Many people are attempting the Nutanix NCP-DB-6.10 test nowadays because its importance is growing rapidly.

## 100% Pass Quiz Nutanix - NCP-DB-6.10 - Valid Exam Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Flashcards

BraindumpsVCE Nutanix NCP-DB-6.10 practice test software is the answer if you want to score higher in the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam and achieve your academic goals. Don't let the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) certification exam stress you out! Prepare with our Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps and boost your confidence in the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam. We guarantee your road toward success by helping you prepare for the Nutanix NCP-DB-6.10 certification exam. Use the best BraindumpsVCE Nutanix NCP-DB-6.10 practice questions to pass your Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam with flying colors!

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q210-Q215):

### NEW QUESTION # 210

A database administrator logged into their NDB dashboard notices the Savings over traditional cloning metric in the Data Usage widget.

What does this number represent?

- A. The amount of disk space saver from compression
- B. The amount of disk space saved from deduplication
- C. The amount of disk space saved with near-zero byte clones
- D. The amount of disk space saved with shadow clones

**Answer: C**

Explanation:

The "Savings over traditional cloning" metric in the Data Usage widget on the NDB dashboard reflects the efficiency of NDB's

cloning technology compared to traditional full-copy cloning methods. NDB leverages Nutanix's near-zero byte cloning capability, which creates lightweight clones by sharing base data and only storing changes (deltas). This metric specifically quantifies the disk space saved by using these efficient clones instead of duplicating entire datasets, as would occur in traditional cloning. It highlights NDB's storage optimization for database provisioning and management.

#### NEW QUESTION # 211

Which two methods can be used to upgrade Era? (Choose two.)

- A. One-click Upgrade
- B. Offline Upgrade
- C. Nutanix LCM
- D. Rolling Upgrade

**Answer: A,B**

Explanation:

Nutanix Era can be upgraded using the Offline Upgrade and One-click Upgrade methods. The Offline Upgrade method involves manually downloading the software update and applying it to the Era instance. The One-click Upgrade method allows you to upgrade Era directly from the Era management console with a single click, provided that the Era instance has internet connectivity and can reach the Nutanix software update portal.

#### NEW QUESTION # 212

A DBA team needs to release PostgreSQL HA instances using a dedicated subnet. Which action is mandatory before creating the network profile?

- A. Configure Network Segmentation.
- B. The DB VMs must be registered first.
- C. A VLAN must be added to NDB networks.
- D. The subnet in Prism Element must be iPAM configured.

**Answer: C**

Explanation:

To release PostgreSQL HA instances using a dedicated subnet in Nutanix Database Service (NDB), the administrator must create a network profile that defines the subnet and its associated VLAN. Before creating this network profile, it is mandatory to add a VLAN to the NDB Networks configuration. This VLAN ensures that the dedicated subnet is recognized and manageable within NDB, allowing the HA instances to be provisioned with isolated network connectivity. The VLAN must be configured in the NDB Networks page to be available for selection during network profile creation.

#### NEW QUESTION # 213

When performing a SQL Server Restore Source Database operation, what is a valid reason an administrator would choose the Restore Location as New Location?

- A. The log files are needed to perform the point in time restore.
- B. The database files are on a disk with other database files and the administrator wants to get the database restored as quickly as possible.
- C. The administrator wants to keep the original schema in place.
- D. The administrator wants to restore to a new location and have Era apply Nutanix best practices.

**Answer: D**

Explanation:

When performing a SQL Server Restore Source Database operation in Nutanix Database Automation (NCP-DB), an administrator might choose the Restore Location as New Location if they want to restore to a new location and have Era apply Nutanix best practices. This is because Nutanix Era automates and simplifies database management, allowing the administrator to manage databases at scale, and it applies Nutanix best practices during the restore process. This ensures optimal performance and reliability of the restored database.

### NEW QUESTION # 214

For supported Linux based database VM's managed by NDB, how would an administrator keep software profiles updated for provisioning new database VMs?

- A. Create a Maintenance window under the policy menu, then under Database VM, add the database VMs to that maintenance window and check both Database and Operating system updates.
- B. Associate the newly provisioned database VMs with a maintenance window so they are keep updated.
- C. Apply patches to a database VM for each supported database engine, then create a new software profile version for each supported database VM for each one using the updated database VM as the source.
- D. In the Administrator menu drop down, go the Maintenance tab and choose Download Upgrade

**Answer: C**

Explanation:

For supported Linux-based database VMs managed by NDB, keeping software profiles updated for provisioning new database VMs requires a structured process. The administrator must first apply the necessary patches (e.g., OS updates and database engine patches) to an existing database VM for each supported database engine (e.g., PostgreSQL, Oracle). Then, a new software profile version must be created using the updated VM as the source. This new version captures the patched configuration and can be used to provision new VMs, ensuring they are deployed with the latest updates.

### NEW QUESTION # 215

.....

In this way, you can achieve your career objectives. Before this, you have to pass the Nutanix NCP-DB-6.10 exam which is not an easy task. The NCP-DB-6.10 certification exam is a difficult and competitive exam that always gives a tough time to NCP-DB-6.10 Exam holders. However, with the assistance of NCP-DB-6.10 Questions, you can prepare well and later on pass the Nutanix NCP-DB-6.10 exam easily.
