## Updated Google Associate-Cloud-Engineer Practice Exams for Self-Assessment (Web-Based and Desktop)

Passing the test Associate-Cloud-Engineer certification can prove you are that kind of talents and help you find a good job with high pay and if you buy our Associate-Cloud-Engineer guide torrent you will pass the exam successfully. Our product boosts many merits and useful functions to make you to learn efficiently and easily. Our Associate-Cloud-Engineer guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our Associate-Cloud-Engineer Torrent

question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time.

The Google Associate Cloud Engineer certification is designed to measure the candidates' fundamental skills required to perform the deployment, monitoring, and maintenance of projects on Google Cloud. This certificate is a good starting point for those individuals who are new to Cloud and can be used as a stepping stone to the professional-level certifications of this vendor. To get certified, the applicants are required to complete one exam. The qualifying test measures the ability of the specialists to perform the following tasks: setting up the Cloud solution environment; planning and configuring Cloud solutions; deploying and implementing Cloud solutions; ensuring the effective operation of Cloud solutions; and configuring access & security.

To take the ACE exam, candidates should have a good understanding of the fundamentals of cloud computing and GCP. This includes knowledge of GCP products and services, such as Compute Engine, App Engine, and Kubernetes Engine, as well as experience in deploying applications and managing solutions in cloud environments. Candidates should also be familiar with GCP security features and best practices for managing data and resources on GCP.

## Google Associate Cloud Engineer Exam Sample Questions (Q296-Q301):

### NEW QUESTION # 296

You are hosting an application on bare-metal servers in your own data center. The application needs access to Cloud Storage. However, security policies prevent the servers hosting the application from having public IP addresses or access to the internet. You want to follow Google-recommended practices to provide the application with access to Cloud Storage. What should you do?

- A. 1. Use nslookup to get the IP address for storage.googleapis.com.2. Negotiate with the security team to be able to give a public IP address to the servers.3. Only allow egress traffic from those servers to the IP addresses for storage.googleapis.com.
- **B. 1. Use Migrate for Compute Engine (formerly known as Velostrata) to migrate those servers to Compute Engine.2. Create an internal load balancer (ILB) that uses storage.googleapis.com as backend.3. Configure your new instances to use this ILB as proxy.**
- C. 1. Using Cloud VPN or Interconnect, create a tunnel to a VPC in GCP.2. Use Cloud Router to create a custom route advertisement for 199.36.153.4/30. Announce that network to your on-premises network through the VPN tunnel.3. In your on-premises network, configure your DNS server to resolve \*.googleapis.com as a CNAME to restricted.googleapis.com
- D. 1. Using Cloud VPN, create a VPN tunnel to a Virtual Private Cloud (VPC) in Google Cloud Platform (GCP).2. In this VPC, create a Compute Engine instance and install the Squid proxy server on this instance.3. Configure your servers to use that instance as a proxy to access Cloud Storage.

**Answer: B**

### NEW QUESTION # 297

You are hosting an application from Compute Engine virtual machines (VMs) in us-central1-a. You want to adjust your design to support the failure of a single Compute Engine zone, eliminate downtime, and minimize cost. What should you do?

- A. - Create Compute Engine resources in us-central1-b.  
- Balance the load across both us-central1-a and us-central1-b.
- B. - Perform regular backups of your application.  
- Create a Cloud Monitoring Alert and be notified if your application becomes unavailable.  
- Restore from backups when notified.
- C. - Create an HTTP(S) Load Balancer.  
- Create one or more global forwarding rules to direct traffic to your VMs.
- **D. - Create a Managed Instance Group and specify us-central1-a as the zone.  
- Configure the Health Check with a short Health Interval.**

**Answer: D**

### NEW QUESTION # 298

You are using Data Studio to visualize a table from your data warehouse that is built on top of BigQuery. Data is appended to the data warehouse during the day. At night, the daily summary is recalculated by overwriting the table. You just noticed that the charts in Data Studio are broken, and you want to analyze the problem. What should you do?

- A. Review the Error Reporting page in the Cloud Console to find any errors.
- **B. Use the BigQuery interface to review the nightly Job and look for any errors**
- C. In Cloud Logging create a filter for your Data Studio report
- D. Use Cloud Debugger to find out why the data was not refreshed correctly

**Answer: B**

Explanation:

Cloud Debugger is for inspecting apps: <https://cloud.google.com/debugger/docs>.

### NEW QUESTION # 299

You need a dynamic way of provisioning VMs on Compute Engine. The exact specifications will be in a dedicated configuration file. You want to follow Google's recommended practices. Which method should you use?

- A. Unmanaged Instance Group
- B. Cloud Composer
- C. Deployment Manager
- **D. Managed Instance Group**

**Answer: D**

Explanation:

### NEW QUESTION # 300

You keep attempting to execute a command, and while there's no error being thrown, you suspect something is going wrong. You want to check out the gcloud logs. However, you can't recall in which directory they're located. Your script skills are not what they could be, so you can't rely on using those fancy command line skills.

Which command could you run to show you where the log directory is located?

- A. gcloud logging
- B. gcloud
- **C. gcloud info**
- D. google logs

**Answer: C**
