A 2x2 video wall was sold with each display being Full HD resolution. Now the client wants to show live content at the best possible quality over the complete wall. Which resolution must the camera provide?

- A. 4096 x 2160
- B. 3840 x 2160
- C. 7680 x 4320
- D. 1920 x 1080

**Answer: C**

Explanation:

Each display in a 2x2 video wall setup at Full HD resolution (1920 x 1080) requires a total resolution of 3840 x 2160 for two displays horizontally and 2160 x 2 vertically, which equals 7680 x 4320. This resolution ensures each display shows content at the highest quality without scaling down.

- B. Drawing change to document CAD details
- C. Price change to a vendor purchase order
- D. Change to the technician's salary

**Answer: A**

### NEW QUESTION # 177

As the height of a character increases on a display.

- A. brightness increases.
- B. brightness decreases.
- C. legibility decreases.
- D. legibility increases.

**Answer: D**

Explanation:

Legibility of text on a display is directly related to the height of the characters. As the height increases, the text becomes easier to read from a distance because the characters are larger and more distinct. This is a fundamental principle in design and ergonomics, ensuring that text is easily readable for users in various viewing conditions. This is particularly important in contexts such as digital signage, user interfaces, and public information displays. References:

### NEW QUESTION # 178

Which of the following is an EQ type?

- A. gate

- B. parametric
- C. compressor
- D. limiter

**Answer: B**

Explanation:

In audio technology, EQ (equalization) refers to the process of adjusting the balance between different frequency components of an audio signal. EQ types are specifically designed tools that allow sound engineers to manipulate frequencies in different ways. The types of EQ generally fall into categories like graphic, parametric, shelving, and band-pass, among others.

A parametric EQ is a type of equalizer that offers control over three primary parameters:

- \* Frequency - the specific frequency to be adjusted.
- \* Gain - the amount of boost or cut applied to the selected frequency.
- \* Q (Quality Factor) - the bandwidth or range of frequencies affected around the selected frequency.

Unlike other choices, a parametric EQ provides precise control over these settings, making it highly versatile in audio production. The other options are not types of EQ but rather different types of audio processing tools:

- \* Gate: Used to control the amplitude of an audio signal, often to suppress noise below a certain threshold.
- \* Limiter: A dynamics processor that prevents a signal from exceeding a set level.
- \* Compressor: Reduces the dynamic range of an audio signal by attenuating louder parts above a threshold.

CTS Technology Specialist Reference

The use of parametric EQ is a standard practice in AV system design, as outlined in the CTS (Certified Technology Specialist) training materials, which discuss various EQ types and their applications in optimizing audio fidelity. Parametric EQs are favored in professional settings for their flexibility and control over specific frequencies, as compared to fixed-frequency or limited-band EQs.

**NEW QUESTION # 179**

Which of the following is the MOST SUITABLE security method for a small portable projector?

- A. cable lock
- B. adjustable mount
- C. security screws
- D. Nylock nuts and bolts

**Answer: A**

Explanation:

The most suitable security method for a small portable projector is a cable lock. Cable locks are specifically designed to secure portable devices like projectors by attaching them to a fixed object, preventing unauthorized removal. This method is both practical and effective for portable devices, as it provides a good balance of security and ease of use without requiring permanent installation or modifications to the device.

Reference: Security guidelines for portable devices, such as those provided by leading security accessory manufacturers like Kensington, highlight the effectiveness of cable locks in securing portable electronics.
