Reliable ISTQB-CTFL Hot Spot Questions Offers Candidates 100% Pass-Rate Actual ISTQB ISTQB Certified Tester Foundation Level (CTFL v4.0) Exam Products

With all the above merits, the most outstanding one is 100% money back guarantee of your success. Our ISTQB experts deem it impossible to drop the ISTQB-CTFL exam, if you believe that you have learnt the contents of our ISTQB-CTFL study guide and have revised your learning through the ISTQB-CTFL Practice Tests. If you still fail to pass the exam, you can take back your money in full without any deduction. Such bold offer is itself evidence on the excellence of our ISTQB-CTFL study guide and their indispensability for all those who want success without any second thought.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q339-Q344):

NEW QUESTION # 339

Given the following state model of sales order software:

- * PLACED -> IN PRODUCTION
- * IN PRODUCTION -> CANCELLED
- * IN PRODUCTION -> SHIPPED
- * SHIPPED -> INVOICED
- * INVOICED -> CANCELLED
- * CANCELLED -> PLACED

Which of the following sequences of transitions provides the highest level of transition coverage for the model (assuming you can start in any state)?

- A. IN PRODUCTION -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED -> PLACED
- B. PLACED -> CANCELLED -> PLACED -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED
- C. PLACED -> IN PRODUCTION -> SHIPPED -> CANCELLED -> PLACED
- **D. IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION**

Answer: D

Explanation:

State transition testing is a black-box testing technique where test cases are designed to cover states and transitions of a state machine.

Given the state model with the following transitions:

- * PLACED -> IN PRODUCTION
- * IN PRODUCTION -> CANCELLED
- * IN PRODUCTION -> SHIPPED
- * SHIPPED -> INVOICED
- * INVOICED -> CANCELLED
- * CANCELLED -> PLACED

To cover all transitions at least once, we need to create a sequence that covers all six transitions.

Option A: IN PRODUCTION -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED -> PLACED- Misses SHIPPED -> INVOICED and INVOICED -> CANCELLED transitions.

Option B: IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION- Covers all transitions.

Option C: PLACED -> IN PRODUCTION -> SHIPPED -> CANCELLED (ISTQB not-for-profit association) (Udemy)sses INVOICED -> CANCELLED transition.

Option D: PLACED -> CANCELLED -> PLACED -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED- Misses SHIPPED -> INVOICED and INVOICED -> CANCELLED transitions.

Given these, Option B covers all the transitions.

NEW QUESTION # 340

A Static analysis tool analyzes a given program's CONTROL FLOW among other things. Which of the following options represents the most likely outcome of the control flow analysis:

- A. Number of comment lines
- B. Report on adherence to the coding standards
- C. Number of source code lines
- **D. Identification of unreachable code**

Answer: D

Explanation:

A static analysis tool is a tool that analyzes a given program's source code or executable code without executing it. A static analysis tool can perform various types of analysis on a program's code, such as syntax checking, data flow analysis, control flow analysis, complexity measurement, coding standards compliance checking, etc. Control flow analysis is a type of analysis that examines how a program's statements are executed in different paths or branches. One of the most likely outcomes of control flow analysis is identification of unreachable code, which is code that can never be executed due to logical errors or design flaws. Unreachable code can reduce readability and maintainability of the code, as well as increase complexity and size. The other options are not outcomes of control flow analysis, but rather outcomes of other types of analysis. Report on adherence to coding standards is an outcome of coding standards compliance checking. Number of comment lines and number of source code lines are outcomes of complexity measurement. NEW QUESTION # 341

In the newest version of payroll system number of changes were made. As a tester you got a task to perform regression and confirmation tests. Which of the following project activities are related to confirmation testing?

- A. Testing if a system still works after update of an operating system
- B. Testing to ensure the adding of a new functionalities haven't broken existing functions
- C. Testing that fixes resolved the defects in the search function
- D. Testing due to the application of a new version of the interface

Answer: C

Explanation:

Confirmation testing, also known as re-testing, is performed to verify that specific defects have been successfully fixed.

Option A: "Testing due to the application of a new version of the interface" would typically involve regression testing, not confirmation testing.

Option B: "Testing that fixes resolved the defects in the search function" fits the description of confirmation testing as it focuses on ensuring that specific issues have been addressed.

Option C: "Testing if a system still works after update of an operating system" is an example of regression testing, as it checks the overall system behavior after an update.

Option D: "Testing to ensure the adding of new functionalities haven't broken existing functions" is another example of re (ISTQB not-for-profit association) (Udeny) it checks for unintended consequences of new changes.

Therefore, the correct answer is B6†source9†source.

NEW QUESTION # 343

Which of the following statements about Experience Based Techniques (EBT) is correct?

- A. EBT is based on the ability of the test engineer to implement various testing techniques.
- **B. EBT use tests derived from the test engineers' previous experience with similar technologies.**
- C. EBT is done as a second stage of testing, after non-experienced-based testing took place.
- D. EBT require broad and deep knowledge in testing but not necessarily in the application or technological domain.

Answer: B

Explanation:

Experience based techniques (EBT) are techniques that use the knowledge, intuition and skills of the test engineers to design and execute tests. EBT use tests derived from the test engineers' previous experience with similar technologies, domains, applications or systems. EBT are not based on the ability of the test engineer to implement various testing techniques, but rather on their personal judgment and creativity. EBT are not done as a second stage of testing, after non-experience-based testing took place, but rather as a complementary or alternative approach to other techniques. EBT require broad and deep knowledge in both testing and the application or technological domain, as this can help the test engineer identify potential risks, scenarios or defects.
