- A. for (List L : AccountList) {...}

- B. `for(AccountList) {...}`
- C. `for (Integer i=0;`
- D. `i < AccountList.Size(); i++) {...}`

Answer: B,D

NEW QUESTION # 95

A developer is alerted to an issue with a custom Apex trigger that is causing records to be duplicated. What is the most appropriate debugging approach to troubleshoot the issue?

- A. Disable the trigger in production and test to see if the issue still occurs.
- B. Use the Apex Interactive Debugger to step through the code and identify the issue.
- C. Add `system.debug` statements to the code to track the execution flow and identify the issue.
- D. Review the Historical Event logs to identify the source of the issue.

Answer: C

NEW QUESTION # 96

A team of developers is working on a source-driven project that allows them to work independently, with many different org configurations. Which type of Salesforce orgs should they use for their development?

- A. Scratch orgs
- B. Developer orgs
- C. Full Copy sandboxes
- D. Developer sandboxes

Answer: A

Explanation:

Scratch orgs are short-term Salesforce environments that you can spin up to work on a feature. They are source-driven and disposable, meaning you can create and delete them as needed. They are fully configurable, allowing you to emulate different Salesforce editions with different features and settings. You can also install packages and deploy synthetic or dummy data for testing. Scratch orgs are ideal for developing in a source-driven way, as they enable source tracking, which keeps your local source files and the metadata in your org in sync. You can use Salesforce CLI or an IDE to create, open, and manage scratch orgs. Scratch orgs are different from other types of Salesforce orgs, such as Developer sandboxes, Full Copy sandboxes, and Developer orgs, which are long-term, persistent, and not source-driven. NEW QUESTION # 97

A change set deployment from a sandbox to production fails due to a failure in a managed package unit test. The developer spoke with the managed package owner and they determined it is a false positive and can be ignored. What should the developer do to successfully deploy?

- A. Select 'Run local tests' to run all tests in the org that are not in the managed package.
- B. Edit the managed package's unit test.
- C. Select 'Run local tests' to run only the tests that are in the change set.
- D. Select 'Fast Deploy' to run only the tests that are in the change set.

Answer: A

NEW QUESTION # 98

Universal Containers wants Opportunities to no longer be editable when it reaches the Closed/Won stage. Which two strategies can a developer use to accomplish this?

- A. Use a before-save Apex trigger.
- B. Use an automatically launched Approval Process.
- C. Use an auto-response rule.
- D. Use a validation rule.

Answer: A,D

Explanation:

Universal Containers wants to prevent Opportunities from being edited once they reach the Closed/Won stage. To achieve this, the developer can use the following strategies:

Option A: Use a validation rule.

Correct Approach.

A validation rule can be created on the Opportunity object to prevent users from editing records when the Stage is Closed/Won. The validation rule would evaluate whether the record's StageName is 'Closed Won' and, if so, display an error message when a user attempts to edit and save the record.

Example Validation Rule:

AND(

ISPICKVAL(StageName, 'Closed Won'),

ISCHANGED(ANYFIELD) // Replace ANYFIELD with specific fields if needed

)

Benefits:

Declarative Solution: No code required.

Consistent Enforcement: Applies across all user interfaces and API.

An Apex trigger can be written to check if an Opportunity record being modified has a StageName of 'Closed Won'.

In a before update trigger, the trigger can prevent the save operation by adding an error to the record.

Sample Apex Trigger:

```
trigger PreventOpportunityEdit on Opportunity (before update) {
```

```
for (Opportunity opp : Trigger.new) {
```

```
Opportunity oldOpp = Trigger.oldMap.get(opp.Id);
```

```
if (oldOpp.StageName == 'Closed Won' && opp != oldOpp) {
```

```
opp.addError('Closed Won Opportunities cannot be edited.');
```

```
}
```

```
}
```

```
}
```

Benefits:

Programmatic Control: Allows for complex logic.

Granular Enforcement: Can specify exact conditions under which edits are prevented.

Approval Processes are designed for record approval workflows.

They do not inherently prevent edits based on a field value like StageName.

Option D: Use an auto-response rule.

Incorrect.

Auto-response rules are used to send automated email responses to Leads or Cases.

They do not control record editability.

Conclusion:

The most appropriate strategies are A (Validation Rule) and B (Before-save Apex Trigger).

Both methods effectively prevent users from editing Opportunities in the Closed/Won stage.
