Microsoft AZ-800 certification is a valuable credential for IT professionals who are looking to advance their careers in cloud computing and hybrid infrastructure management. Administering Windows Server Hybrid Core Infrastructure certification demonstrates that the candidate has the skills and knowledge required to design, implement, and manage complex hybrid environments that can provide the best of both on-premises and cloud infrastructures. Administering Windows Server Hybrid Core Infrastructure certification also opens up new career opportunities for IT professionals and helps them stay relevant in a rapidly evolving IT landscape.

Earning the Microsoft AZ-800 Certification demonstrates to potential employers that an IT professional is proficient in administering Windows Server hybrid core infrastructure. Administering Windows Server Hybrid Core Infrastructure certification can help IT professionals advance their careers and increase their earning potential. Additionally, it can help organizations ensure that their IT staff have the necessary skills and knowledge to manage their hybrid infrastructure effectively.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q236-Q241):

NEW QUESTION # 236
You have an Azure subscription named sub1 and 500 on-premises virtual machines that run Windows Server.
You plan to onboard the on-premises virtual machines to Azure Arc by running the Azure Arc deployment script You need to create an identity that mil be used by the script to authenticate access to sub1. The solution must use the principle of least privilege.
How should you complete the command? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 237
You have an Active Directory Domain Services (AD DS) domain. The domain contains three servers named Server 1, Server2, and Server3 that run Windows Server.
You sign in to Server1 by using a domain account and start a remote PowerShell session to Server2. From the remote PowerShell session, you attempt to access a resource on Server3. but access to the resource is denied.
You need to ensure that your credentials are passed from Server1 to Server3. The solution must minimize administrative effort. What should you do?

- A. Configure Just Enough Administration (JEA).
- B. Disable the Enforce user logon restrictions policy setting for the domain.
- C. Configure selective authentication for the domain.
- D. Configure Kerberos constrained delegation.

Answer: A

NEW QUESTION # 238
Your network contains two VLANs for client computers and one VLAN for a datacenter Each VLAN is assigned an IPv4 subnet Currently, all the client computers use static IP addresses.
You plan to deploy a DHCP server to the VLAN in the datacenter.
You need to use the DHCP server to provide IP configurations to all the client computers.
What is the minimum number of scopes and DHCP relays you should create? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 239
You have an Azure virtual machine named VM1 that runs Windows Server.
You need to configure the management of VM1 to meet the following requirements:
Require administrators to request access to VM1 before establishing a Remote Desktop connection.
Limit access to VM1 from specific source IP addresses.
Limit access to VM1 to a specific management port.

What should you configure?

- A. Azure Front Door
- B. a network security group (NSG)
- C. Microsoft Defender for Cloud
- D. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)

Answer: C
