

Valid PAP-001 Exam Papers - PAP-001 Valid Test Objectives

One can start using product of Exams4Collection instantly after buying. The 24/7 support system is available for the customers so that they don't stick to any problems. If they do so, they can contact the support system, which will assist them in the right way and solve their issues. A lot of Certified Professional - PingAccess (PAP-001) exam applicants have used the Certified Professional - PingAccess (PAP-001) practice material. They are satisfied with it because it is updated.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.
Topic 2	<ul style="list-style-type: none">• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
Topic 3	<ul style="list-style-type: none">• Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.

PAP-001 Valid Test Objectives | Valid PAP-001 Dumps

The marketplace is competitive, especially for securing a well-paid job. Moving your career one step ahead with PAP-001 certification will be a necessary and important thing. How to get the PAP-001 exam dumps with 100% pass is also important. Ping Identity PAP-001 training topics will ensure you pass at first time. The experts who involved in the edition of PAP-001 questions & answers all have rich hands-on experience, which guarantee you the high quality and high pass rate.

Ping Identity Certified Professional - PingAccess Sample Questions (Q61-Q66):

NEW QUESTION # 61

An organization wants to take advantage of a new product feature that requires upgrading the PingAccess cluster from 7.3 to the current version. The administrator downloads the required files and places the files on the PingAccess servers. What should the administrator do next?

- **A. Upgrade the Admin Console.**
- B. Disable Key Rolling.
- C. Upgrade the Replica Admin.
- D. Disable cluster communication.

Answer: A

Explanation:

When upgrading a PingAccess cluster, the Admin Console node must always be upgraded first before any replica admin or engine nodes. This ensures that the configuration and schema changes introduced in the new version are properly applied and replicated.

Exact Extract (from PingAccess documentation):

"In a clustered environment, you must first upgrade the administrative console node before upgrading any replica administrative nodes or engine nodes." Why A is correct:

* A. Upgrade the Admin Console- This is correct because the admin console node acts as the configuration master in a PingAccess cluster. Upgrading it first ensures the new version schema is available to replicas and engines.

Why the other options are incorrect:

* B. Disable cluster communication- This is not required for standard upgrades. Cluster communication remains in place to synchronize changes after the upgrade.

* C. Disable Key Rolling- Key rolling is unrelated to the upgrade process. It is a feature used for key rotation, not version upgrades.

* D. Upgrade the Replica Admin- This is incorrect because upgrading a replica admin before the primary administrative console is against the documented procedure and would cause replication issues.

NEW QUESTION # 62

Which two protocols does PingAccess use for authentication and authorization? (Choose 2 answers.)

- **A. OAuth2**
- B. SAML
- C. WS-Trust
- D. WS-Fed
- **E. OIDC**

Answer: A,E

Explanation:

PingAccess is designed to work with modern identity protocols. It does not support legacy WS-* protocols directly.

Exact Extract:

"PingAccess integrates with OAuth 2.0 and OpenID Connect (OIDC) to provide authentication and authorization for web and API resources."

* Option A (SAML) is incorrect - PingAccess does not natively consume SAML assertions; SAML can be used indirectly via PingFederate.

* Option B (WS-Fed) is not supported.

- * Option C (WS-Trust) is not supported.
 - * Option D (OAuth2) is correct - used for authorization and token validation.
 - * Option E (OIDC) is correct - used for user authentication and sessions.
- Reference: PingAccess Administration Guide - Supported Protocols

NEW QUESTION # 63

An administrator is preparing to rebuild an unrecoverable primary console and must promote the replica admin node. Which two actions must the administrator take? (Choose 2 answers.)

- **A. Modify `bootstrap.properties` and set the `engine.admin.configuration.host` value to point at the replica admin node.**
- B. Restart all nodes in the cluster.
- C. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes.
- D. Restart the replica admin node.
- **E. Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.**

Answer: A,E

Explanation:

From the "Promoting the replica administrative node" documentation:

* Exact Extract:

"Open the `<PA_HOME>/conf/run.properties` file in a text editor. Locate the `pa.operational.mode` line and change the value from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. These properties are case-sensitive. Do not restart the replica node during the promotion process." Ping Identity Documentation

* Also from the documentation under "Next steps" / manual promotion / "Using the admin API ..." "When promoting the replica, there is also mention of setting the new host-port in the primary admin configuration so that engine nodes and configuration references now point to the promoted replica. One of the API properties is `editRunPropertyFile` (to flip the mode), another is `editPrimaryHostPort`, which causes the primary-admin host setting to be updated." Ping Identity Documentation Using those facts:

Why C is correct:

* Option C says: Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.

This directly matches the documented manual promotion step: `switchpa.operational.mode` from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. Ping Identity Documentation+1

* This is essential for promoting the replica to primary console.

Why E is correct:

* Option E: Modify `bootstrap.properties` and set the `engine.admin.configuration.host` value to point at the replica admin node. While the documentation doesn't always name the exact property `engine.admin.configuration.host`, the "promote via admin API" includes updating the "primary host:port" in the configuration so that engine nodes' configuration queries (or whatever is used by engines) point to the new primary. This maps to ensuring that engine nodes know that the promoted replica is now the administrative node. This requiring modifying the bootstrap or configuration that engine nodes use to find the administrative host is essential. Ping Identity Documentation Why the other options are incorrect:

* A. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes. No.

Engine nodes should have `pa.operational.mode = CLUSTERED_ENGINE`, not console modes.

`CLUSTERED_CONSOLE_REPLICA` is an admin/replica console mode, not applicable for engines.

docs.ping.directory+2 Ping Identity Documentation+2

* B. Restart all nodes in the cluster. The documentation explicitly says do not restart the replica node during the promotion process because restart can cause file corruption or failure to properly promote.

Only certain restarts are needed after configuration updates. So restarting all nodes is not a correct required action. Ping Identity Documentation

* D. Restart the replica admin node. As above, for manual promotion, a restart of the replica admin node is not required (and is even discouraged during the promotion process). The change in `run.properties` is detected without restarting. Ping Identity Documentation Reference: PingAccess Reference Guide - Promoting the replica administrative node / Manually promoting the replica administrative node Ping Identity Documentation+1

NEW QUESTION # 64

Where should an administrator adjust `SameSite Cookies` settings?

- **A. Web Sessions**
- B. Rules

- C. Applications
- D. Sites

Answer: A

Explanation:

TheSameSiteattribute is applied to session cookies to control cross-site behavior. In PingAccess, session cookie configuration (includingSameSite) is defined at theWeb Sessionlevel.

Exact Extract:

"Web session configuration includes cookie attributes such as name, domain, secure flag, HTTPOnly, and SameSite."

- * Option A (Rules)is incorrect - rules govern access control, not cookies.
- * Option B (Sites)defines backend connections, not session cookies.
- * Option C (Applications)ties resources to sessions but does not define cookie behavior.
- * Option D (Web Sessions)is correct - session cookie SameSite settings are configured here.

Reference:PingAccess Administration Guide -Web Session Cookies

NEW QUESTION # 65

What is the purpose of theadmin.authconfiguration setting?

- **A. To override the SSO configuration for the administrative user interface.**
- B. To enable automatic authentication to the PingAccess administrative console.
- C. To define the method to use for authenticating to the administrative API.
- D. To configure SSO for the administrative user interface.

Answer: A

Explanation:

Theadmin.authsetting in the`run.properties`file is used to specify a fallback authentication method for the administrative console.

Exact Extract from official documentation:

"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the `admin.auth=`native property in the `run.properties` file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose of`admin.auth`is tooverrideany configured SSO for the admin UI and enforce native (basic) authentication instead.

- * Option Ais incorrect because the`admin.auth`setting does not configure SSO. SSO for the admin UI is configured separately.
- * Option Bis incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.
- * Option Cis correct because it directly reflects the documented behavior:`admin.auth`overrides SSO configuration for the administrative UI and enables native authentication.
- * Option Dis incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.
