최신 SAP Certified Associate C-S4TM-2023 무료 샘플문제 (Q15-Q20):

질문 # 15

Which of the following driver management settings are maintained in freight order customization?

- A. Default truck handling
- B. Resource requirements
- C. Default driver
- D. Home location

정답: D

설명:

In SAP S/4HANA Transportation Management, driver management settings for freight orders are configured in the freight order type customization. According to the SAP documentation, the home location (C) is a key setting maintained in freight order customization, specifying the base location for drivers assigned to freight orders. This setting helps in planning and scheduling by considering the driver's starting point.

The other options are incorrect:

- * Default truck handling (A) is not a standard setting in freight order customization; it may relate to vehicle resource configuration.
- * Default driver (B) is assigned in vehicle resources or planning profiles, not directly in freight order type customization.
- * Resource requirements (D) (corrected from "Number of required drivers" in the original document for clarity) are defined in vehicle resources or planning settings, not freight order customization.
