

# Web-Based Practice Tests: The Key to VMware 2V0-15.25 Exam Success

P.S. Free 2026 VMware 2V0-15.25 dumps are available on Google Drive shared by CertkingdomPDF: [https://drive.google.com/open?id=1LdiPkTUCII6GwsqVG1v\\_GOq8OrJFcA99](https://drive.google.com/open?id=1LdiPkTUCII6GwsqVG1v_GOq8OrJFcA99)

If the user does not complete the mock test question in a specified time, the practice of all 2V0-15.25 learning materials previously done by the user will automatically uploaded to our database. The system will then generate a report based on the user's completion results, and a report can clearly understand what the user is good at. Finally, the transfer can be based on the 2V0-15.25 Learning Materials report to develop a learning plan that meets your requirements. With constant practice, users will find that feedback reports are getting better, because users spend enough time on our 2V0-15.25 learning materials.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>

## Reliable VMware 2V0-15.25 Exam Test & 2V0-15.25 Latest Exam Pdf

Even we have engaged in this area over ten years, professional experts never blunder in their handling of the 2V0-15.25 exam torrents. By compiling our 2V0-15.25 prepare torrents with meticulous attitude, the accuracy and proficiency of them is nearly perfect. As the leading elites in this area, our 2V0-15.25 prepare torrents are in concord with syllabus of the exam. They are

professional backup to this fraught exam. So by using our 2V0-15.25 Exam torrents made by excellent experts, the learning process can be speeded up to one week. They have taken the different situation of customers into consideration and designed practical 2V0-15.25 test braindumps for helping customers save time. As elites in this area they are far more proficient than normal practice materials' editors, you can trust them totally.

## VMware Cloud Foundation 9.0 Support Sample Questions (Q29-Q34):

### NEW QUESTION # 29

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- \* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
- \* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- **A. Add the SDDC Manager integration for the VCF instance.**
- B. Deploy an additional VCF workload domain cluster.
- C. Trigger an inventory synch in VCF Operations fleet management.
- D. Deploy a new VCF workload domain.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory-including NSX Managers, clusters, regions, vCenters, and SDDC Manager objects-before new regions can be created for Kubernetes-based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs when SDDC Manager is not integrated into VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

- \* NSX Manager inventory
- \* vCenter endpoints
- \* Workload domain topology
- \* Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary-inventory access is the problem, not resources.

Option B (triggering inventory sync) cannot work because no SDDC Manager integration exists.

### NEW QUESTION # 30

An administrator logs into the VMware NSX Manage UI and observes a "Remote Logging Not Configured" alarm for each NSX Management node. What is a possible reason for this issue?

- A. Update the NSX Uplink Profile to configure a remote logging server.
- **B. Update the NSX Node Profile to configure a remote logging server.**
- C. Update the NSX Edge Cluster Profile to configure a remote logging server.
- D. Update the NSX Configuration Profile to configure a remote logging server.

**Answer: B**

Explanation:

The "Remote Logging Not Configured" alarm in NSX Manager is a system-health alert indicating that one or more Transport Nodes (Edges or Hypervisors) or Management Nodes do not have a Syslog server defined.

\* NSX Node Profiles: In VMware NSX (and by extension VCF), the standard method to apply consistent administrative settings-such as Syslog Servers, NTP settings, and Core Dump configurations-across a fleet of nodes is to use an NSX Node Profile.

- \* Configuration Path: The administrator should navigate to System > Fabric > Profiles > Node Profiles. Here, they can create or edit a profile that specifies the remote syslog server's IP/FQDN, port, and protocol.
- \* Application: Once the Node Profile is applied to the NSX Management Cluster or Edge Clusters, the configuration is pushed to all respective appliances, clearing the alarm.
- \* Why not A/B: Edge Cluster Profiles manage networking/BFD settings; Uplink Profiles manage NIC teaming and MTU.

### NEW QUESTION # 31

An administrator is preparing to upgrade their VMware Cloud Foundation (VCF) management domain from VCF 5.0 to VCF 9.0. After configuring the online depot, they see the SDDC Manager 9.0 upgrade bundle is available. However, the 9.0 upgrade bundles for vCenter, ESX, and NSX are missing. How can the administrator resolve this issue?

- A. Use the VCF Offline Bundle Transfer Utility (OBTU) to download the missing 9.0 upgrade bundles.
- **B. Upgrade the SDDC Manager to 9.0.**
- C. Use the VCF Download Tool to download the missing 9.0 upgrade bundles.
- D. Upgrade the management domain from VCF 5.0 to VCF 5.2.

**Answer: B**

Explanation:

When upgrading from VCF 5.0 to VCF 9.0, the upgrade workflow requires that the SDDC Manager be upgraded first before any other component bundles (vCenter, ESX, NSX) become visible. This is explicitly stated in the VMware Cloud Foundation upgrade process: the upgrade bundles for the management domain components are dependent on the SDDC Manager version. The online depot will not present the 9.0 upgrade bundles for vCenter, ESX, or NSX until the SDDC Manager itself has reached the target major version (in this case, 9.0).

This is because SDDC Manager contains the updated Lifecycle Management (LCM) engine and updated bundle manifests, which are required to understand, download, and orchestrate the remaining component upgrades. Attempting to download the other bundles without upgrading SDDC Manager first is not supported.

Options B and D (download tools) are incorrect because the issue is not that the bundles are missing from the depot, but that SDDC Manager 5.x cannot interpret 9.0 component bundles. Option C (upgrade to 5.2 first) is also incorrect because the VCF 5.x to 9.x upgrade path is directly managed by the upgrade planner once SDDC Manager is upgraded.

Thus, the correct resolution is to upgrade the SDDC Manager to 9.0, after which the remaining component bundles will become available.

### NEW QUESTION # 32

An administrator creates a tag for a virtual machine (VM) in VMware Cloud Foundation (VCF) Operations. When assigning the tag to the virtual machine in vCenter, the tag was not found. What is the cause of this error?

- **A. The tag was not pushed to the vCenter instance.**
- B. The vCenter version is incorrect.
- C. The tag was not pushed to Custom Groups.
- D. VM Tools is not installed.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0 Operations, tags created inside VCF Operations do not automatically appear in vCenter. Tags must be explicitly synchronized ("pushed") to the selected vCenter instance before they become usable for VM tagging within vCenter. This is because VCF Operations maintains its own metadata store for tags, super metrics, groups, and policies.

The correct workflow is:

- \* Create the tag in VCF Operations.
- \* Push (synchronize) the tag to the appropriate vCenter instance.
- \* The tag then appears in vCenter's Tags & Custom Attributes section.
- \* Administrators can then assign the tag to VMs.

If the push step is skipped, the tag exists only inside VCF Operations and cannot be referenced by vCenter, which is exactly the symptom described: tag not found when attempting to assign it to a VM.

Option A is incorrect because Custom Groups do not affect vCenter tag visibility.

Option B is incorrect because tag synchronization is not tied to a specific vCenter version as long as the vCenter is officially

supported by VCF 9.x.

Option D is irrelevant-VMware Tools has nothing to do with tag visibility.

### NEW QUESTION # 33

After upgrading from VMware Cloud Foundation (VCF) 5.2 to VMware Cloud Foundation (VCF) 9.0 the administrator attempts to enable SSH access through the vCenter console to the newly upgraded VCF Ops instance and is not able to. They attempt to log in through SSH as the root user and they are unable to. What needs to be done to enable SSH access to the VCF Ops instance?

- A. Rollback to snapshot because the upgrade did not work as expected.
- B. Reset the root password.
- C. Reboot the appliance and enable SSH.
- **D. Use VCF Operations to remediate the password**

**Answer: D**

Explanation:

In VMware Cloud Foundation (VCF) 9.0, the management of appliance credentials and lifecycle operations is centralized within the VCF Operations Fleet Manager (which subsumes the roles of the legacy SDDC Manager Life Cycle Management).

\* **The Problem:** The administrator is unable to log in as root via the console or SSH. This indicates a credential synchronization issue or account lockout, which prevents them from manually enabling SSH via the console (the traditional method).

\* **The Solution (Remediate Password):** The "Remediate Password" workflow in VCF Operations allows the administrator to reset and synchronize the root password for VCF components (like the VCF Ops instance itself) directly from the management plane.

\* By navigating to Fleet Management > Passwords (or similar path in VCF 9.0), the administrator can select the affected instance and choose Remediate.

\* This process updates the password in the centralized database and on the appliance, restoring the ability to log in.

\* Once the root access is restored via remediation, the administrator can then proceed to enable SSH (either via the VCF Operations settings UI or the console). Without the correct password (which "Remediate" fixes), SSH cannot be enabled.

Note: Options A and B (Reset/Reboot) are legacy manual steps that do not ensure the VCF inventory database is updated, potentially leading to further "configuration drift" or sync errors. Option C is unnecessary for a credential issue.

### NEW QUESTION # 34

.....

Our 2V0-15.25 study materials are the product for global users. No matter which country you are in, you can buy and study our 2V0-15.25 exam questions to pass the exam. And the standards in all aspects about our 2V0-15.25 learning engine are also required by international standards. In terms of privacy that everyone values, we respect every user. Our company has always put the customer first as a development concept. It is very safe and easy to buy our 2V0-15.25 Practice Braindumps!
