素晴らしいCBCI模擬問題集一回合格-一番優秀なCBCI合格受験記

BCIのCBCIクイズトレントは無料の試用版を提供します。したがって、CBCIテスト準備についてより深く理解し、この種の学習教材が購入に適しているかどうかを推定するのに役立ちます。MogiExam試用版を使用すると、テストプラットフォームで利用可能な3つの異なるバージョンの選択からアフターサービスまで、さまざまな側面からのCBCI試験トレントについてより深く理解できます。CBCI試験問題を試してみたら、Certificate of the Business Continuity Institute (CBCI)購入するのが大好きです。

BCI CBCI 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Validation: This final module emphasizes testing and verifying the effectiveness of implemented plans through exercises and reviews—ensuring that what was designed and implemented actually performs as intended under real-world conditions.
トピック 2	• Design: Here, learners explore how to translate analysis into strategic plans by developing continuity designs that mitigate identified risks, ensuring critical operations remain functional or can be quickly restored during disruptions.
トピック 3	• Policy and Programme Management and Embedding: This part guides users through establishing a Business Continuity Management System (BCMS), including how to craft governance, define a policy, and embed these elements into the fabric of an organization for long-term sustainability.
トピック 4	• Implementation: This section covers putting the designed continuity strategies into action, including creating and deploying incident response and business continuity plans, structuring effective response teams, and ensuring operational readiness.

BCI Certificate of the Business Continuity Institute (CBCI) 認定 CBCI 試験問題 (Q42-Q47):

質問 # 42

In order to make it easier to manage risk, complexity and cost when establishing a Business Continuity Management System (BCMS), the initial scope of the BCMS should:

- A. Be limited to specific high-value areas of the organization
- B. Be limited to information technology disaster recovery plans
- C. Include as many of the organization's products and services as possible
- D. Focus on crisis management

正解: A

解説:

The CBCI 7.0 course advises that when establishing a BCMS, an initial focused scope limited to high-value or critical parts of the organization is practical to manage complexity and costs effectively. This allows targeted efforts on areas that pose the greatest risks or have the most significant impact on continuity. Over time, the scope can be expanded as maturity develops. Including everything initially or focusing only on IT disaster recovery limits effectiveness or overcomplicates early efforts, respectively. Crisis management is part of BCMS but not the sole focus of the initial scope.

質問 # 43

Strategic, tactical, and operational plans should always be activated:

- A. Simultaneously
- B. Based on the conditions or circumstances documented in the relevant team plan
- C. Only after it is determined that full activation of all teams is necessary
- D. When cascaded down from the strategic team

正解: B

解説:

The CBCI 7.0 course specifies that activation of strategic, tactical, and operational plans must be based on the conditions or triggering events detailed in each specific plan. Each plan type serves distinct purposes at different organizational levels and phases of incident response. Strategic plans set the overarching direction; tactical plans translate this into actions, and operational plans provide detailed task instructions. The triggering conditions—such as incident severity, scope, or impact—dictate when each plan should be activated to optimize resource use and response effectiveness. Simultaneous activation is neither practical nor efficient. Activation cascading from the strategic team is a controlled process, but ultimately depends on predefined triggers, ensuring an orderly and appropriate escalation.

質問 # 44

Which of the following is a factor that should be taken into consideration when developing an exercise program?

- A. It is necessary to carry out exercises for only a sample of the plans and recovery teams in place
- B. It is necessary to carry out exercises only once as initial tests will provide all of the required information
- **C. It requires a series of events and activities scheduled over a period of time**
- D. A single type of exercise should be used for all so that participants become familiar with the structure and approach of the exercise activities

正解: C

解説:

Developing an effective exercise program involves planning a series of varied events and activities over time to comprehensively test and validate different aspects of Business Continuity. The CBCI 7.0 course underlines that exercises should be progressive, increasing in complexity and scope, to build capability and confidence. Conducting exercises only once or relying on a single type of exercise limits effectiveness and can lead to gaps in readiness. Similarly, sampling plans restricts full organizational preparedness. A systematic, scheduled program ensures continuous improvement and coverage across plans and teams.

質問 # 45

In order to ensure that priority is given to activities with the shortest Recovery Time Objectives (RTOs), strategies can:

- A. Identify workarounds for all activities other than those with short RTOs
- B. Include relevant extracts from the Business Impact Analysis (BIA)
- C. Include a risk assessment to identify the best treatment option
- **D. Highlight activities with short RTOs by categorising strategies by timeframe**

正解: D

解説:

The CBCI 7.0 course highlights that categorizing strategies by timeframe is an effective method to ensure focus on activities with short RTOs. This approach visually and operationally segments recovery strategies, allowing the organization to prioritize resources and actions that address the most time-critical functions first.

Including BIA extracts supports understanding but is insufficient on its own. Risk assessments inform treatment choices but do not inherently prioritize by RTO. Workarounds for non-priority activities are useful but are a secondary measure after prioritization. Categorizing by recovery time frames aligns operational focus with impact tolerances.

Reference: CBCI 7.0 Study Guide, Module 5: Solutions Development, pages 91-94.

質問 # 46

Which of the following is NOT part of the process to implement solutions to resume business operations?

- A. Ensuring alignment with the response structure and plans
- B. Complying with the organization's project management procedures
- C. Providing training for users of solutions and support staff
- **D. Updating the Activities Business Impact Analysis (BIA) to take into account the effect of the solutions on priority activities**

正解: D

解説:

While the Activities BIA informs the development of solutions, updating the BIA is not part of the solution implementation process itself. The CBCI 7.0 course explains that implementing solutions focuses on ensuring that operational plans, training, and governance are aligned and effectively deployed. Training equips personnel to use and support new solutions properly. Compliance with project management processes ensures structured, controlled implementation. The BIA is a foundational analysis tool and is typically reviewed or updated separately during scheduled risk and impact assessments rather than during solution implementation. Conflating BIA updates with implementation may confuse strategic assessment with operational execution.
