## 真実的なEAEP2201資格認証攻略試験-試験の準備方法-便利なEAEP2201勉強時間

弊社のEAEP2201問題集のメリットはいろいろな面で記述できます。価格はちょっと高いですが、EAEP2201試験に最も有効な参考書です。EAEP2201問題集は便利で、どこでもいつでも勉強できます。また、時間を節約で

き、短い時間で勉強したら、EAEP2201試験に参加できます。

## Esri Enterprise Administration Professional 2201 認定 EAEP2201 試験問題 (Q40-Q45):

### 質問 # 40

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Run usage reports in Portal for ArcGIS to determine the effect on the organization.
- B. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- C. Open ArcGIS Server statistics to create a report for commonly used items.

正解: C

### 質問 # 41

A GIS administrator publishes a feature service that references user-managed data. The administrator wants users to add new features. Users should not make changes to attributes of existing features or delete features.

Which feature service operations should be set?

- A. Update and sync
- B. Extract and create
- C. Create and query

正解: C

解説:

To allow users to add new features without the ability to modify or delete existing ones, the feature service should have the "Create" and "Query" operations enabled. The "Create" operation permits users to add new features, while the "Query" operation allows them to view existing features. By not enabling the "Update" and

"Delete" operations, users are restricted from making changes to or removing existing features. This configuration is ideal for workflows where data integrity is crucial, and only the addition of new data is permitted.

Enabling "Update and sync" (Option A) would allow users to modify existing features and synchronize changes, which is not desired in this scenario. "Extract and create" (Option C) is not a standard combination of operations for controlling editing permissions in feature services.

Reference Source: ArcGIS Server documentation on editor permissions for feature services

### 質問 # 42

An organization has a requirement to geocode crime incidents from a CSV uploaded to the ArcGIS Enterprise portal. How should the organization configure their ArcGIS Server site to meet this requirement?

- A. With a registered geodatabase
- B. As an ArcGIS GeoEvent Server
- C. As the hosting server

正解: C

解説:

To enable geocoding of addresses from CSV files uploaded to the ArcGIS Enterprise portal, the organization must designate a federated ArcGIS Server site as the hosting server. This hosting server must have a relational data store configured. Once set up, the portal can utilize a geocode utility service to process the addresses. This configuration allows users to map addresses from CSV files added to the portal.

Reference Source: ArcGIS Enterprise documentation on configuring the portal to geocode addresses

### 質問 # 43

An organization must limit the users who can publish services that reference data in a user-managed database.

At the same time, all users must be able to access and edit the data in that user-managed data store.  
How should the database be registered?

- A. As a data store item in the ArcGIS Enterprise portal
- **B. As an ArcGIS-managed data store in Server Manager**
- C. As a relational data store in ArcGIS Data Store

**正解: B**

解説:

Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.

Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.

Reference Source: ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

#### 質問 # 44

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. 2443 and 6443
- B. 443 and 6443
- **C. 6443 and 7443**
- D. 80 and 443

**正解: C**

解説:

Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:

\* 7443 for Portal for ArcGIS

\* 6443 for ArcGIS Server

Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.

From ArcGIS Enterprise security documentation:

"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."

\* Option B is partially correct but leaves out Portal (7443).

\* Option C is for HTTP/HTTPS access from the public, not internal communications.

\* Option D includes the Data Store admin port (2443), which isn't required here.
