

Get Exam Ready with Real ISQI CTFL-AcT Questions Natural

Achieve success by using our corrected ISQI CTAL-TAE exam questions 2024. We offer success guarantee with our updated CTAL-TAE dumps.

iSQI CTAL-TAE Exam Questions [Rectified 2024] - Get Ready For The Exam

Are you taking the ISTQB Certified Tester Advanced Level, Test Automation Engineering Exam and want to ensure perfect preparation for the CTAL-TAE Advanced Level Test Automation Engineer exam? CertsLink [iSQI CTAL-TAE exam questions](#) preparation can help you get there with ease. CertsLink iSQI CTAL-TAE exam questions is a comprehensive learning package that offers the CTAL-TAE Advanced Level Test Automation Engineer exam real questions and answers with key features so that you can prepare for the CTAL-TAE ISTQB Certified Tester Advanced Level, Test Automation Engineering Exam smoothly.

Real iSQI CTAL-TAE Exam Questions In The PDF Format

The Advanced Level Test Automation Engineer CTAL-TAE exam questions are available in pdf format, which makes it convenient for you to save the iSQI CTAL-TAE pdf to any device such as desktop, mac, smartphone, laptop, and tablet. It also means that the iSQI CTAL-TAE exam questions is easily accessible no matter where you are, so you can prepare for your CTAL-TAE

P.S. Free 2026 ISQI CTFL-AcT dumps are available on Google Drive shared by ITCertMagic: <https://drive.google.com/open?id=1S8JEwpXQ5id0A9y6xTrZTpxUKX5SZpS7>

The ISQI CTFL-AcT certification exam is one of the top-rated and valuable credentials in the ISQI world. This ISQI CTFL-AcT certification exam is designed to validate a candidate's skills and knowledge. With ISQI CTFL-AcT Certification Exam everyone can upgrade their expertise and knowledge level.

Our website offer considerate 24/7 services with non-stopping care for you. Although we cannot contact with each other face to face, but there are no disparate treatments and we treat every customer with consideration like we are around you at every stage during your review process. We will offer help insofar as I can. Some company refused to rescind customers' money when they fail unfortunately at the end of the day. While our CTFL-AcT practice materials are beneficiary even you lose your chance of winning this time. Full refund or other version switch is accessible.

Reliable ISQI CTFL-AcT Test Online | CTFL-AcT Valid Exam Pdf

We declare that we can ensure you 100% pass, because we have the real exam questions for the CTFL-AcT actual test. All the questions of ISQI CTFL-AcT test pdf are taken from current pool of actual test, then after refined and checked, compiled into the complete dumps. Furthermore, the answers are correct and verified by our IT experts with decades of hands-on experience. So the high quality and accuracy of CTFL-AcT Cert Guide are without any doubt. With our 100 % pass rate history & money back guarantee, you can rest assured to choose our CTFL-AcT vce files.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which one of the following statements describes correctly how acceptance testing may be augmented with other test techniques or approaches?

- A. In a risk-based testing approach, acceptance criteria are derived from the tester's experience and intuition.
- B. In a priority-based testing approach, prioritization of acceptance tests depends on identified product risks.
- C. In a model-based testing approach, acceptance tests are generated from graphical or textual models.
- D. In a black-box testing approach, acceptance test scenarios follow the implemented sequence of function calls in the code.

Answer: C

NEW QUESTION # 43

Which TWO of the following statements about exploratory testing are most true?

- A. Exploratory testing implements time-boxed sessions to prioritize tests based on product risk analysis
- B. Exploratory testing is an experience-based test technique which refines acceptance criteria into acceptance test cases
- C. Exploratory testing is rather carried out by people with a good knowledge of the business domain, but not necessarily of the tested functionality
- D. Exploratory testing generally begins with the definition of the test charter that defines the detailed test L-' conditions
- E. Exploratory testing is achieved by combining product discovery, test design and execution, and results L- interpretation

Answer: D,E

Explanation:

Exploratory testing is a dynamic testing technique where learning, test design, execution, and interpretation occur simultaneously. It is especially useful when detailed requirements are unavailable or when testers rely on experience and intuition.

A is correct: Exploratory testing combines exploration, learning about the product, designing and executing tests on the fly, and interpreting the results - all within the same session.

E is also correct: Exploratory testing usually starts with a high-level test charter that defines the mission, objectives, or focus area for the session. It may not define specific test conditions, but it outlines the scope and intent.

Other options:

B: Not accurate - while timeboxing is used, exploratory testing typically relies on charters and experience rather than detailed product risk analysis to prioritize.

C: Incorrect - exploratory testing is not about refining acceptance criteria; that's part of ATDD.

D: Partially true but misleading - good business domain knowledge helps, but understanding the functionality is also important in exploratory testing.

NEW QUESTION # 44

Which one of the following statements describes an exploratory test charter BEST?

- A. Each exploratory test charter is based on a previously defined list of activities that would be interesting to test.
- B. Indicating that the tester should take the role of a novice user can be part of an exploratory test charter.
- C. The test charter is elaborated during the testing session according to test execution results.
- D. Acceptance testers use the exploratory test charter during the testing session to define the test oracle.

Answer: B

NEW QUESTION # 45

In Agile an exploratory test session is conducted. Which one of the following concepts applies BEST?

- A. refactoring
- B. planning poker
- C. pair programming
- D. timeboxing **Answer**

Answer: D

Explanation:

Exploratory testing in Agile projects is a structured but unscripted testing approach where learning, test design, and execution occur simultaneously. Timeboxing is a key practice in managing exploratory testing sessions effectively.

A timebox is a fixed duration (e.g., 60-90 minutes) within which testers explore specific functionalities or risks. It encourages focus, documentation of findings, and prevents overrun or testing fatigue. After the session, testers often hold debriefs to review findings and determine next steps.

Option D is correct because timeboxing is essential for exploratory testing management.

Incorrect options:

- A). Pair programming relates to development, not testing.
- B). Refactoring is a development technique focused on improving code without changing behavior.
- C). Planning poker is used in Agile for effort estimation, not directly related to exploratory testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 3.1):

"Exploratory testing is often conducted in time-boxed sessions, with a charter guiding the scope of the session."

NEW QUESTION # 46

As a part of a travel expense reimbursement management system, the following business process is defined:

* After receipt of the expense report, a new account must be created if the employee does not already have one. The report is then reviewed.

* Amounts less than \$200 are automatically approved, while amounts equal to or greater than \$200 must be approved by the supervisor. If the request is rejected, the employee is informed. The employee is reimbursed by payment to his or her bank account.

* If the request is not processed within 7 days, the employee receives an "ongoing" e-mail. If the request is not completed within 30 days, then the process is stopped, and the employee receives a cancellation e-mail asking her/him to resubmit the refund request. The following BPMN model has been submitted for review. Which of the following comments is MOST Likely to have been made on this BPMN model?

- **A. The second timing event should be "30 days" instead of "23 days"**
- B. This BPMN model is correct, so there should not be any review comments
- C. The "Supervisor Review" activity should be positioned after the "Send for Payment" activity
- D. After "Advise Employee to Start Again" the flow should go to an "end" event

Answer: A

Explanation:

Comprehensive Detailed Explanation:

According to the scenario described in the question, the business process for expense reimbursement includes two key timing constraints:

If the request is not processed within 7 days, an "ongoing" email is sent to the employee.

If the request is not completed within 30 days, the process is canceled and the employee is asked to resubmit the request.

However, in the BPMN model presented in the image, the second timing event (clock icon near "Approval in Progress") incorrectly shows 23 days instead of 30 days. This discrepancy misrepresents the actual business rule and violates the accuracy required in process modeling.

ISTQB Foundation Level Extension - Acceptance Testing syllabus and the Certified Tester Foundation Level Business Process Testing (CTFL-BAT) emphasize that a process model should correctly reflect the specified behavior, rules, and constraints of the business scenario. An incorrect timer can lead to miscommunication between stakeholders and incorrect automation or implementation logic.

Therefore, Option A is the most likely review comment since it directly points to this inconsistency in the model.
