And the PDF version of our XSOAR-Engineer exam questions can be noted when you want to memory something as well as to indicate the keypoints. Also, our XSOAR-Engineer Preparation exam is unlimited in number of devices, making it easy for you to learn anytime, anywhere.

Palo Alto Networks XSOAR Engineer Sample Questions (Q178-Q183):

NEW QUESTION # 178

A temporary integration issue causes a scheduled job to fail continuously. Which action will ensure the job continues to run after future failures?.

- A. Ensure the last playbook task runs closeInvestigation.
- B. Adjust the Role-Based Access Control (RBAC) of the incident type.
- C. Verify that the "Continue on Error" box is checked in the job.
- D. Edit Queue Handling settings of the job.

Answer: C

Explanation:

Jobs in XSOAR run playbooks or scripts automatically at scheduled intervals. According to the Job Execution section of the Admin Guide, if a job encounters an error during playbook execution, its continued operation depends on whether "Continue on Error" is

enabled. When this checkbox is selected, the job will not terminate due to an exception or integration failure. Instead, it logs the error and proceeds to the next scheduled execution as normal.

Queue handling settings (A) apply to indicators/job queues within feeds, not job failure behavior. RBAC changes (C) do not influence job execution continuity. Ensuring the last task closes the investigation (D) is unrelated and may even disrupt job workflows, since jobs often do not require incident-based models.

By contrast, enabling Continue on Error is the documented mechanism that prevents scheduled jobs from halting due to transient or recurring errors. It ensures operational resilience, especially during integration outages or API rate limits.

Thus, option B is the correct and fully documented answer.

NEW QUESTION # 179

Which three support types are included in the Marketplace Content Packs? (Choose three.)

- A. Partner supported
- B. Customer supported
- C. Cortex XSOAR supported
- D. Prisma Cloud supported
- E. Community supported

Answer: A,C,E

Explanation:

NEW QUESTION # 180

Based on the integration and classifier configuration images below,

which incident type will be created for incidents ingested using this integration when the incoming "type" field is set to "url allowed"?

- A. Case.
- B. Access.
- C. URL Allowed.
- D. XSOAR ENGINEER- URL Alerts.

Answer: D

NEW QUESTION # 181

Management would like to get an incident report automatically following an incident's closure. How would this be accomplished?

- A. Manually create an 'Incident Report'
- B. Create an 'Incident Report' from the Reports page
- C. Define a task in a playbook to generate an incident report before the closure occurs
- D. Configure post-processing using a script

Answer: D

NEW QUESTION # 182

Which two options will troubleshoot an integration's fetch incidents command? (Choose two.)

- A. Create a one task playbook with a fetch-incident command
- B. execute `!<integration_instance_name>-fetch`
- C. In the instance settings, enable the fetch incidents parameter and wait for one minute
- D. execute `!<integration_name>-fetch`

Answer: B,C

Explanation:
