Microsoft certification DP-600 exam has become a very popular test in the IT industry, but in order to pass the exam you need to spend a lot of time and effort to master relevant IT professional knowledge. In such a time is so precious society, time is money. ExamDiscuss provide a training scheme for Microsoft Certification DP-600 Exam, which only needs 20 hours to complete and can help you well consolidate the related IT professional knowledge to let you have a good preparation for your first time to participate in Microsoft certification DP-600 exam.

High quality practice materials like our DP-600 learning dumps exert influential effects which are obvious and everlasting during your preparation. The high quality product like our DP-600 real exam has no need to advertise everywhere, the exam candidates are the best living and breathing ads. Our DP-600 Exam Questions will help you you redress the wrongs you may have and will have in the DP-600 study guide before heads. Just come and try!

## **Test DP-600 Simulator & Reliable DP-600 Test Syllabus**

When it comes to a swift DP-600 exam preparation with the best reward, nothing compares ExamDiscuss DP-600 dumps. They are made with an aim to provide you the most relevant information and knowledge within a few days and ensure you a brilliant success. Each DP-600 Exam Dumps is unique and vitally important for your preparation. The work you are supposed to do have already been done by our highly trained professionals.

## **Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q122-Q127):**

**NEW QUESTION # 122**

You have a Fabric tenant that uses a Microsoft tower BI Premium capacity. You need to enable scale-out for a semantic model. What should you do first?

- A. At the tenant level, set Data Activator to Enabled.
- B. At the semantic model level, set Large dataset storage format to Off.
- **C. At the semantic model level, set Large dataset storage format to On.**
- D. At the tenant level, set Create and use Metrics to Enabled.

**Answer: C**

#### **NEW QUESTION # 123**

You have a Fabric tenant that contains a lakehouse named Lakehouse1.

You need to prevent new tables added to Lakehouse1 from being added automatically to the default semantic model of the lakehouse.

What should you configure? (5)

- A. the semantic model settings
- B. the Lakehouse1 settings
- **C. the SQL analytics endpoint settings**
- D. the workspace settings

**Answer: C**

Explanation:

To prevent new tables added to Lakehouse1 from being automatically added to the default semantic model, you should configure the semantic model settings. There should be an option within the settings of the semantic model to include or exclude new tables by default. By adjusting these settings, you can control the automatic inclusion of new tables.

#### **NEW QUESTION # 124**

You have a Fabric workspace that uses the default Spark starter pool and runtime version 1,2.

You plan to read a CSV file named Sales.raw.csv in a lakehouse, select columns, and save the data as a Delta table to the managed area of the lakehouse. Sales\_raw.csv contains 12 columns.

You have the following code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

\* The Spark engine will read only the 'SalesOrderNumber', 'OrderDate', 'CustomerName', 'UnitPrice' columns from Sales\_raw.csv.

- Yes

\* Removing the partition will reduce the execution time of the query. - No

\* Adding inferSchema='true' to the options will increase the execution time of the query. - Yes The code specifies the selection of certain columns, which means only those columns will be read into the DataFrame. Partitions in Spark are a way to optimize the execution of queries by organizing the data into parts that can be processed in parallel. Removing the partition could potentially increase the execution time because Spark would no longer be able to process the data in parallel efficiently. The inferSchema option allows Spark to automatically detect the column data types, which can increase the execution time of the initial read operation because it requires Spark to read through the data to infer the schema.

#### **NEW QUESTION # 125**

You have a KQL database that contains a table named Readings.

You need to query Readings and return the results shown in the following table.

How should you complete the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

**NEW QUESTION # 126**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Fabric tenant that contains a new semantic model in OneLake.

You use a Fabric notebook to read the data into a Spark DataFrame.

You need to evaluate the data to calculate the min, max, mean, and standard deviation values for all the string and numeric columns.

Solution: You use the following PySpark expression: df.show()

Does this meet the goal?

- **A. No**
- B. Yes

**Answer: A****NEW QUESTION # 127**

.....

ExamDiscuss offers a free demo of Microsoft DP-600 exam dumps before the purchase to test the features of the products.

ExamDiscuss also offers 12 months of free Microsoft DP-600 Exam Questions updates if the DP-600 certification exam content changes after purchasing our DP-600 exam dumps.
