Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q23-Q28):

NEW QUESTION # 23
An administrator needs to move infrequently accessed data to lower-cost storage based on file type and owner, and automatically recall data if data access frequency has increased.
What should administrator do to satisfy these requirements?

- A. Configure Advanced tiering in Data Lens.
- B. Configure Smart tiering in Files.
- C. Create an SSR-enabled share in Files.
- D. Create a Lifecycle Rule in Objects Buckets tab.

Answer: B

NEW QUESTION # 24
The exhibit shows a Prism Pro scenario result created by an administrator for a Nutanix cluster.
The physical nodes in the cluster include these characteristics:
144 GHz CPU power
3 Tib RAM
41.63 TiB storage
The total target workload requests are:
5 Ghz CPU
10 GB RAM
40 TiB storage
What should be changed to have a good capacity runway at least for the next 6 months?

- A. Review storage capacity requested by the workload.
- B. Add new physical node to the configuration.
- C. Increase the storage capacity for physical nodes.
- D. Change the date of physical rode availability.

Answer: A

Explanation:
According to the Nutanix Support & Insights website1, capacity runway is an estimate of how long your cluster can support its current workload before running out of resources2. The exhibit shows that your cluster has a storage runway of only 1 month, which means you will run out of storage space soon. However, your CPU and memory runways are much longer (more than 2 years), which means you have plenty of CPU and memory resources available. Therefore, it might be possible to reduce the storage capacity requested by your workload or optimize your storage utilization to extend your storage runway. Alternatively, you could also increase the storage capacity for physical nodes or add new physical nodes to the configuration, but these options might be more costly and complex.

NEW QUESTION # 25
Which setting should the administrator apply to a newly-created Objects bucket to ensure the requirements are met?

- A. Apply a bucket Lifecycle Policy with a one-year expiration.
- B. Configure a Lifecycle Policy to overwrite one-year old data in the bucket.
- C. Configure the bucket WORM policy with a one-year retention,
- D. Apply an Object versioning policy with one-year retention.
