

# Why Practicing With Dupleader AIP-210 Dumps is Necessary?

BONUS!!! Download part of Dupleader AIP-210 dumps for free: <https://drive.google.com/open?id=1hpIPDDch4kUGBoIQ7lH2OzWgSwxK77H->

Our experts make these demos very clearly to demonstrate the content in our AIP-210 torrent prep. For those customers who are not acquainted with our products, these demos can help you familiarize yourself with what our materials contain and they will give you a frank appraisal of our official AIP-210 Exam Questions. All wordings cannot describe the procession of our products, but if you get them and after checking the content, you will be determined to place order. What are you waiting for?

Our AIP-210 training materials are of high quality, and we also have free demo to help you know the content of the AIP-210 exam dumps. Free update for 365 days after purchasing is available, and the update version will be sent to you timely. If you fail to pass the exam, we will return your money into the payment account. All we do is for your interest, and we also accept your suggestion and advice for AIP-210 Training Materials.

>> **AIP-210 Latest Braindumps Ppt** <<

## 100% Pass Quiz CertNexus - Pass-Sure AIP-210 Latest Braindumps Ppt

Though the content of our AIP-210 practice guide is the same, the varied formats indeed bring lots of conveniences to our customers. The PDF version of AIP-210 exam materials can be printed so that you can take it wherever you go. And the Software version can simulate the real exam environment and support offline practice. Besides, the APP online can be applied to all kind of electronic devices. No matter who you are, I believe you can do your best to achieve your goals through our AIP-210 Preparation questions!

### CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Recognize relative impact of data quality and size to algorithms</li><li>Engineering Features for Machine Learning</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Train, validate, and test data subsets</li><li>Training and Tuning ML Systems and Models</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Address business risks, ethical concerns, and related concepts in training and tuning</li><li>Work with textual, numerical, audio, or video data formats</li></ul>

- Design machine and deep learning models
- Explain data collection
- transformation process in ML workflow

## CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q90-Q95):

### NEW QUESTION # 90

In which of the following scenarios is lasso regression preferable over ridge regression?

- A. There is high collinearity among some of the features associated with the dependent variable.
- B. The number of features is much larger than the sample size.
- C. There are many features with no association with the dependent variable.
- D. The sample size is much larger than the number of features.

**Answer: C**

Explanation:

Lasso regression is a type of linear regression that adds a regularization term to the loss function to reduce overfitting and improve generalization. Lasso regression uses an L1 norm as the regularization term, which is the sum of the absolute values of the coefficients. Lasso regression can shrink some of the coefficients to zero, which effectively eliminates some of the features from the model. Lasso regression is preferable over ridge regression when there are many features with no association with the dependent variable, as it can perform feature selection and reduce the complexity and noise of the model.

### NEW QUESTION # 91

Which of the following scenarios is an example of entanglement in ML pipelines?

- A. Change in normalization function in the feature engineering step.
- B. Change the way output is visualized in the monitoring step.
- C. Add a new method for drift detection in the model evaluation step.
- D. Add a new pipeline for retraining the model in the model training step.

**Answer: A**

Explanation:

Entanglement in ML pipelines occurs when a change in one step affects other steps that depend on it. Changing the normalization function in the feature engineering step would affect the model training and evaluation steps, as they rely on the features generated by the feature engineering step. Therefore, this scenario is an example of entanglement in ML pipelines. The other scenarios are not examples of entanglement, as they do not affect other steps in the pipeline.

### NEW QUESTION # 92

A change in the relationship between the target variable and input features is

- A. data drift.
- B. concept drift.
- C. covariate shift.
- D. model decay.

**Answer: B**

Explanation:

Explanation

Concept drift, also known as model drift, occurs when the task that the model was designed to perform changes over time. For example, imagine that a machine learning model was trained to detect spam emails based on the content of the email. If the types of spam emails that people receive change significantly, the model may no longer be able to accurately detect spam. References: Understanding Data Drift and Model Drift: Drift Detection in Python | DataCamp, Machine Learning Monitoring, Part 5: Why You Should Care About Data and Concept Drift

### NEW QUESTION # 93

You are developing a prediction model. Your team indicates they need an algorithm that is fast and requires low memory and low processing power. Assuming the following algorithms have similar accuracy on your data, which is most likely to be an ideal choice for the job?

- A. Support-vector machine
- **B. Ridge regression**
- C. Random forest
- D. Deep learning neural network

**Answer: B**

Explanation:

Explanation

Ridge regression is a type of linear regression that adds a regularization term to the loss function to reduce overfitting and improve generalization. Ridge regression is fast and requires low memory and low processing power, as it only involves solving a system of linear equations. Ridge regression can also handle multicollinearity (high correlation among predictors) by shrinking the coefficients of correlated predictors.

### NEW QUESTION # 94

You are building a prediction model to develop a tool that can diagnose a particular disease so that individuals with the disease can receive treatment. The treatment is cheap and has no side effects. Patients with the disease who don't receive treatment have a high risk of mortality.

It is of primary importance that your diagnostic tool has which of the following?

- A. High negative predictive value
- **B. Low false negative rate**
- C. Low false positive rate
- D. High positive predictive value

**Answer: B**

Explanation:

Explanation

A false negative is an error where a positive case (belonging to the target class) is incorrectly predicted as negative (not belonging to the target class). A false negative rate is the ratio of false negatives to all actual positive cases. A low false negative rate means that most of the positive cases are correctly identified by the classifier.

For a diagnostic tool that can diagnose a particular disease so that individuals with the disease can receive treatment, it is of primary importance that it has a low false negative rate. This is because false negatives can have serious consequences for patients who have the disease but do not receive treatment, such as increased risk of mortality or complications. A low false negative rate can ensure that most patients who have the disease are diagnosed correctly and receive timely treatment.

### NEW QUESTION # 95

.....

Once installed AIP-210 practice exam software onto your computer, you can get started as it does not require an internet connection to run. The AIP-210 practice exam software is essential for your CertNexus AIP-210 exam preparation as it gives you hands-on experience before the actual AIP-210 Certification Exam. This kind of exam preparation ensures that a well-prepared and more confident candidate enters the examination arena.
