

최신버전Drupal-Site-Builder최신버전덤프공부자료덤프자료는Acquia Certified Drupal Site Builder Exam for Drupal 10, 11최고의시험대비자료

저희는 수많은 IT자격증시험에 도전해보려 하는 IT인사들께 편리를 가져다 드리기 위해 Acquia Drupal-Site-Builder실제시험출제유형에 근거하여 가장 완벽한 시험공부가이드를 출시하였습니다. 많은 사이트에서 판매하고 있는 시험자료보다 출중한PassTIP의 Acquia Drupal-Site-Builder덤프는 실제시험의 거의 모든 문제를 적중하여 고득점으로 시험에서 한방에 패스하도록 해드립니다. Acquia Drupal-Site-Builder시험은PassTIP제품으로 간편하게 도전해보시면 후회 없을 것입니다.

PassTIP의Acquia Drupal-Site-Builder덤프는 레알시험의 모든 유형을 포함하고 있습니다.객관식은 물론 드래그앤드랍,시물문제등 실제시험문제의 모든 유형을 포함하고 있습니다. Acquia Drupal-Site-Builder덤프의 문제와 답은 모두 엘리트한 인증강사 및 전문가들에 의하여 만들어져Acquia Drupal-Site-Builder 시험응시용만이 아닌 학습자료용으로도 손색이 없는 덤프입니다.저희 착한Acquia Drupal-Site-Builder덤프 데려가세용~!

>> Drupal-Site-Builder최신버전 덤프공부자료 <<

Drupal-Site-Builder최신버전 덤프공부자료 최신버전 덤프공부자료

PassTIP의 도움을 받겠다고 하면 우리는 무조건 최선을 다하여 한번에 패스하도록 도와드릴 것입니다. 또한 일년무료업뎀서비스를 제공합니다. 중요한 건 덤프가 갱신이 되면 또 갱신버전도 여러분 메일로 보내드립니다. 망설이지 마십시오. 우리를 선택하는 동시에 여러분은Drupal-Site-Builder시험고민을 하시지 않으셔도 됩니다.빨리 우리덤프를 장바구니에 넣으시죠.

최신 Drupal 10/11 Drupal-Site-Builder 무료샘플문제 (Q47-Q52):

질문 # 47

Your website has a content type named Hotel with a Taxonomy reference field for Landmarks vocabulary. You want to create a view to list all the hotels filtered by landmarks as a contextual filter. How will you pass the term name in the URL for the contextual filter?

- A. Add Landmarks vocabulary as an exposed filter pass term name as the filter value.
- **B. Add Landmarks vocabulary as a contextual filter and pass term name as a contextual filter.**
- C. Add Landmarks vocabulary as a relationship and then add Landmarks vocabulary as a contextual filter.
- D. Add Landmarks vocabulary both as an exposed filter and contextual filter.

정답: B

설명:

In Drupal 10 and Drupal 11, Views contextual filters are used to dynamically filter content based on values passed through the URL. When filtering content by taxonomy (such as Landmarks), you configure a contextual filter using the taxonomy term field associated with the content type.

To pass a value like a term name in the URL, you must configure the contextual filter to accept term identifiers such as term ID or term name. Drupal Views allows validation and transformation of contextual input, including using the taxonomy term name via settings like "Provide default value" or "Specify validation criteria." This matches option B.

Option A is incorrect because exposed filters rely on user input via UI forms, not URL path arguments.

Option C is unnecessary duplication and not aligned with best practices. Option D is not required because taxonomy reference fields already provide the necessary relationship internally for filtering; explicitly adding a relationship is only needed in more complex multi-entity scenarios.

Therefore, the correct approach is to use a contextual filter configured to accept the taxonomy term (including term name) via the URL, making option B correct.

질문 # 48

Your client wishes to retain past versions of the site content by default. How do you accomplish this?

- A. Install the Content Moderation module, enable the option "Turn on content revisions"
- B. When creating a node, choose the "Enable content history" option
- C. Install the Content Revisions module and enable revisions for each Content type.
- **D. In each Content type configuration, enable the option "Create new revisions"**

정답: D

설명:

The correct answer is D. In Drupal 10 and Drupal 11, retaining past versions of content is handled through node revisions. Drupal's official documentation explains that revisions are controlled at the content type level, and the relevant setting is the "Create new revision" checkbox in the content type configuration. When this option is enabled, Drupal creates a new revision by default whenever content of that type is updated, allowing editors and administrators to retain and review previous versions of the content.

The other options are not correct according to Drupal core documentation. Content Moderation is related to editorial workflows and depends on revisions, but it is not required just to keep past versions of content. There is also no core module called Content Revisions for enabling this basic feature, and "Enable content history" is not the Drupal node setting used for revision retention.

Drupal's API documentation for `NodeType::$new_revision` and `setNewRevision()` confirms that the content type stores whether new revisions should be created by default. The Drupal site-building documentation also notes that new content types, as well as standard Article and Page types, use the Create new revision setting for revision behavior.

I understand you want the next one in the same exact format, verified against Drupal 10/11 site-building documentation. Here it is.

질문 # 49

The development team does monthly releases to the production system. The deployment lasts for an hour.

During the deployment time, the site is put into maintenance mode. You want a certain set of users to be able to access the site during maintenance mode as well.

How do you accomplish this?

- A. Only administrators can access the site during maintenance mode
- B. Create a new role, assign users to the role. Go to Configuration # Development # Maintenance mode and select role to allow access
- C. Under permissions page, provide permission "Administer site" to required users

- D. Create a new role, assign users to the role and provide permission "Use the site in maintenance mode" to new role

정답: D

설명:

In Drupal 10 and Drupal 11, access to the site during maintenance mode is controlled through a specific permission rather than a configuration setting tied directly to roles on the maintenance mode page. The correct approach is to create a role and grant it the permission "Use the site in maintenance mode." Users assigned this role will be able to bypass the maintenance mode restriction and access the site while it is offline for regular visitors.

Option C reflects this exact mechanism and aligns with Drupal core's permission-based access control system. Drupal uses roles and permissions extensively to manage access, and maintenance mode is no exception.

Option A is incorrect because access is not limited strictly to administrators; it depends on permissions.

Option B is incorrect because the Maintenance mode configuration page does not provide role selection for access-this is a common misconception. Option D is also incorrect because granting "Administer site" gives excessive privileges and is not required for maintenance mode access; it violates the principle of least privilege.

Therefore, assigning the "Use the site in maintenance mode" permission is the correct, secure, and Drupal- recommended solution.

질문 # 50

You just installed Drupal 10 with a standard installation profile.

When you visit the User roles list, which three user roles are already available by default?

- A. Site builder
- B. Authenticated user
- C. Administrator
- D. Content editor
- E. Publisher

정답: B,C,D

설명:

In Drupal 10 (Standard installation profile), several roles are created automatically to support common editorial workflows. These include Authenticated user , Content editor , and Administrator .

* Authenticated user is a core default role in all Drupal installations. It represents any logged-in user and is always present.

* Content editor is provided by the Standard installation profile as part of Drupal's out-of-the-box editorial workflow, allowing users to create and manage content.

* Administrator is also included and has full permissions to manage the entire site.

Options A (Site builder) and C (Publisher) are not default roles created by Drupal core or the Standard profile.

While such roles can be created manually or may appear in specific distributions, they are not included by default.

Drupal's documentation for installation profiles confirms that the Standard profile provides a pre-configured editorial setup, including roles like Content editor, in addition to the core Authenticated user and Administrator roles.

Therefore, the correct answers are B, D, and E .

질문 # 51

You have a website which is using a custom theme made specifically for that website. The client complains that content creators see an admin theme called "Claro" while creating or editing content. They want to see the content edit page in their own custom theme, but keep the other admin section in the Claro theme.

How can you achieve this?

- A. Give the Content Creator role permission to "View Admin Theme"
- B. Revoke the permission of viewing the custom theme for content creator role.
- C. On Appearance page, unselect the checkbox "See the administration theme when editing or creating content"
- D. On the Appearance page set admin theme as default theme

정답: C

설명:

Drupal core provides a specific setting for whether node add/edit forms should use the administration theme.

On the Appearance page, this is the checkbox labeled "Use the administration theme when editing or creating content" . When that setting is enabled, content creation and editing routes are treated as admin-theme routes; when it is disabled, those forms use the

site's default front-end theme instead, while the rest of the administration area can still use the admin theme such as Claro. This behavior is implemented in core through the node.settings configuration value use_admin_theme and the node route subscriber that marks node operation routes as admin routes only when that setting is turned on.

That makes option A correct. Option B would not solve the requirement, because setting the admin theme as the default theme would affect the whole site's front-end presentation. Options C and D are incorrect because Drupal does not use a role permission like "View Admin Theme" to control this behavior for node edit pages.

The documented control for this requirement is the Appearance-page checkbox tied to node.settings.

use_admin_theme.
